This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

**Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

**About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

# ZENITH

## CARBURETOR

## WHY?

*Because* ZENITH Supremacy in Carburetor Simplicity, Power, Reliability and Economy is based upon certain *proven facts.*

**SIMPLICITY**—Only five moving parts—not one affecting the mixture control—the famous automatic compound nozzle system.

**POWER**—It takes power to obtain speed. You may not be a speed fiend—but you like to feel power in reserve. De Palma's Packard 905, "the fastest thing on wheels," on Feb. 12th-17th, traveled 1 mile at the rate of 144.7 miles per hour—10 miles at 144.3—20 miles at 134.7. His car was equipped with a stock ZENITH carburetor.

**RELIABILITY**—This was the FIRST CONSIDERATION in designing the U. S. Naval Trans-Atlantic Planes. The performance of ZENITH on all Liberty engines, made its selection a matter of course.

**ECONOMY**—The Trans-Atlantic Planes had to count every drop of fuel. Lives depended on their fuel supply not being wasted. This was the SECOND CONSIDERATION on which the Naval experts based their ZENITH choice—a fact to be considered by every motor car or truck user.

These remarkable achievements explain:—

**WHY** it takes four factories—three in Europe and one in America to supply the world-wide demand.

**WHY** it was selected for the majority of the fighting planes on the Allied Front.

**WHY** it was used on the effective French Renault tanks.

**WHY** it is used by a majority of European automobile manufacturers, including Delage, Peugeot, Gregoire, DeDion and many other well known makers.

**WHY** it is used by over one hundred manufacturers of passenger and commercial cars in the U. S. A.

**WHY** YOU should use ZENITH EQUIPMENT.

**ZENITH CARBURETOR COMPANY**

"NORMA"
PRECISION
BALL BEARINGS
(PATENTED)

The purchase of a car, a truck, or a tractor, is a purchase of service. The returns on the investment come in pleasure or profit from the service rendered. And so small a thing as the bearing in the magneto or lighting generator, may curtail service and reduce investment returns.

Car, truck, and tractor builders, of notably high repute, whose product is known for its service capacity, use "NORMA" - equipped magnetos and lighting generators. They know that "NORMA" is identified with dependable electrical apparatus.

# Important Announcement about Rayfield Carburetors

RAYFIELD Carburetors, the recognized standard of carburetor efficiency, are to be even further improved in quality and manufactured in greatly increased quantity from now on.

Added financial resources have permitted us to greatly enlarge our plant and manufacturing facilities, to further perfect the product and increase production materially to keep pace with the greater demand.

This reorganized company with O. F. Kropf as President and Henry Beneke as Vice-President and Treasurer is now known as The Beneke & Kropf Mfg. Company.

Mr. Beneke formerly Vice-President of Hibbard, Spencer, Bartlett & Co. purchased the interest of Frederick Findeisen and is devoting all of his time to the active management of this business.

Our new facilities allow us to assure prompt delivery not only to automobile owners but to a limited number of manufacturers of high grade cars who are anxious to assure perfect carburetion for their motors.

## The Beneke & Kropf Mfg. Co.

*Successors to Findeisen & Kropf Mfg. Co.*

# Cars of Future Will Be Lighter and More Efficient

## Engineers Discuss Trend in Passenger Car Design at Summer Meeting of S. A. E.

*By EDWARD G. INGRAM*

ONE of the chief subjects discussed at the summer meeting of the Society of Automotive Engineers, at Ottawa Beach, Mich., was that of future design. That passenger cars of the future will be lighter and more efficient, was the consensus of opinion. Most of the engineers believed the four-cylinder engine will continue to be most popular for small cars and the six for large cars. The passing of eight and twelve cylinder engines except in occasional construction was also predicted, yet in the writer's opinion there is some reason to doubt this in view of the superior efficiency shown by certain twelve-cylinder racing cars, over four-cylinder competitors, and the fact that this high efficiency is just what must be aimed at in the car of the future. Of course, the old bugbear of complication comes up when considering the subject in connection with passenger car design, yet, so far, at least, the automobile designer has not let complication stand in his way when the advantages to be gained were worth while.

William B. Stout, consulting engineer of the United Aircraft Engineering Corp., was of the opinion that with the expérience gained from airplane construction, it would be possible to build a five-passenger closed car weighing only 900 lbs. He believed a 15-horsepower, six cylinder engine weighing only 120 lbs. could be built for such a car and that the body could be of plywood construction. Such a car, he thought, should give 30 to 40 miles to a gallon of gasoline.

Needless to say, Mr. Stout's views on weight reduction are extremely optimistic yet probably not impossible of accomplishment. Just how well so light a car would stand up in this country under the constant vibration due to bad roads, is a matter of conjecture.

Herbert C. Snow, in his paper predicted that the medium sized five-passenger car of the future will weigh between 2,500 and 3,500 lbs., and the small car between 1,500 and 2,500 lbs. He believed the four-cylinder engine would fulfill the requirements of the small car and the six that of the large car. He stated that changes in engine design would have to be made to meet the requirements of low-grade fuels.

Henry M. Crane also believed the trend in design would be towards lighter cars. He thought closed cars would be made in increased proportion.

He stated that the passenger car is being considered more and more from the sole point of view of a means of transportation, and with less regard as to what might be called its sporting characteristics. He said in part: "While there has been a continuous effort toward obtaining lighter weight, it has barely been possible in any given car to make up by superior chassis design for a constantly increasing weight of body and equipment. Electric starting and lighting and power tire pumps have had to be provided for, while the use of closed bodies has made absolutely necessary a very considerable increase in the weight of chassis frames. Furthermore, the demand for quietness combined with durability has made it difficult to lighten any of the principal parts of the power plant and driving gear materially, some parts, such as crankshafts, being heavier than ever before. The call for easy riding has made necessary a continuous increase in the weight of the springs."

L. H. Pomeroy, vice-president of the Institution of Automobile Engineers, London, was rather in favor of the four-cylinder engine. He said in part: "The impressive slow running performance of the multi-cylinder cars is, in my opinion, much more a function of the gear ratio than of the number of cylinders. Without going to extremes, flywheels can be made heavy enough on four-cylinder engines so that when running slowly there is no noticeable variation of engine velocity and hence a jerky motion of the car as a whole. In other words, to judge the uniformity of torque given by a four-cylinder engine compared with a twelve-cylinder one by superimposing the torque diagrams is a gross misrepresentation of the facts. From the point of view of power and acceleration cars may be classified in terms of the power exerted by the engine, the road speed at which the power is exerted and by the total weight. These factors determine the acceleration or liveliness of the car, its capacity to climb hills and to accelerate. For any given gear ratio, then, the horse-

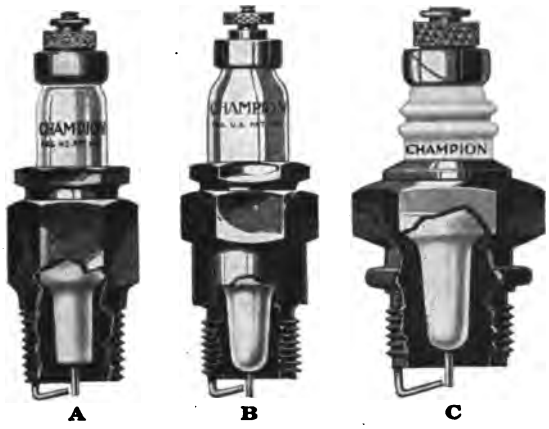
# Tractor Spark Plugs

## A Discussion of the Different Types of Plugs Suitable for Tractor Use and the Advantages and Disadvantages of Each

*By O. C. RHODE*
Chief Engineer, Champion Spark Plug Company

AN automobile engine runs at full load and speed during only a very small part of its term of service. A tractor engine is running at full load practically all the time. Because of this and the fact that low grade fuels are largely used in tractor engines, the problem of spark plugs for tractors differs to some extent from that of spark plugs for automobiles.

As a rule, the use of low grade fuel means higher compression, higher temperature and more dirt and carbon. The last item is made still worse by dust taken in while working during the dry season.



A B C

**A—Two-piece plug — illustrating the Petticoat or open type insulator.**

**B—Two-piece plug — illustrating the Conical or closed type insulator.**

**C—One-piece plug—Conical type insulator.**

It is impossible at the present time to recommend any one type of plug for tractor work. High temperature engines require a plug with an insulator which is exceptionally good electrically, can stand the repeated application of high heat and at the same time not have enough of the central electrode exposed to cause overheating which may induce pre-ignition. An oily engine requires a plug having an insulator with unusually long shorting surface at the firing end.

In spite of the great number of different plugs on the market, there are in reality just two types, those with petticoat or open insulators, and those with conical or closed insulators. The former can be recommended for the engines which show a tendency to foul up rapidly while the latter are recommended only in case the extra extension of wire in the petticoat type shows a tendency to cause pre-ignition.

As a rule, the tractor owner and operator is safe in using the plug furnished with the machine by the manufacturer. Failure of one or two plugs on any particular machine should not be considered enough cause for a change to another type of plug. A few defective plugs do get out into service from time to time in spite of the utmost vigilance on the part of the plug manufacturer.

Troubles due to spark plugs may be divided into two classes—first, cutout or missing; second, pre-ignition.

A missing plug can usually be detected by shorting from the upper terminal of the plug to the engine with a screw driver. The miss may be caused by a broken insulator. If this is the case, the plug will miss fire pretty steadily, both under load and while running idle. The only remedy in case of a two-piece plug is a new insulator, and in case of a one-piece plug a new plug.

The miss may be caused by an insulator which is weak electrically. If this is the case, it will miss when under load, but will recover when running idle. The remedy in this case is a new plug with a better grade of porcelain. In a case of this kind, it is not always necessary to get another make of plug, but to specify to the dealer that the very latest insulator is desired.

The miss may be caused by fouling or surface short. By this, we mean that a continuous layer of carbon or other conducting material has been deposited on the lower end of the insulator and the spark is travelling through this instead of across the gap. A miss of this kind is usually intermittent for a while and finally the plug stops firing altogether. The immediate remedy is to clean the insulator. Where plugs show a tendency to foul up in this way very rapidly, especially where a wet, shiny coating of oil is deposited, it is advisable to change to another brand of oil, which in many cases will get rid of most of this trouble.

Pre-ignition may be caused by other things than the plugs. If it is severe, it sometimes manifests itself by a spitting back through the intake, but it is always accompanied by a loss of power. What actually happens is this: Some part of the material inside the combustion chamber-valves, carbon, plugs, etc., has become hot enough to fire the mixture before time for the spark. The piston is not yet at the top of its compression stroke when the force of this premature explosion tries to drive it back down. The momentum of the flywheel carries it over, but power is, of course, lost. In case of pre-ignition, the engine should first be examined to see whether there is an excessive accumulation of carbon and whether there are any particles hanging loose on valves or spark plugs.

The plugs should be looked over for rough edges on either wire or shell. If a petticoat plug is being used and no indications of this kind are to be found, it may be advisable to try a conical plug which very often will overcome the trouble, though it may need more frequent cleaning.

Occasionally the electrode wire shows signs of

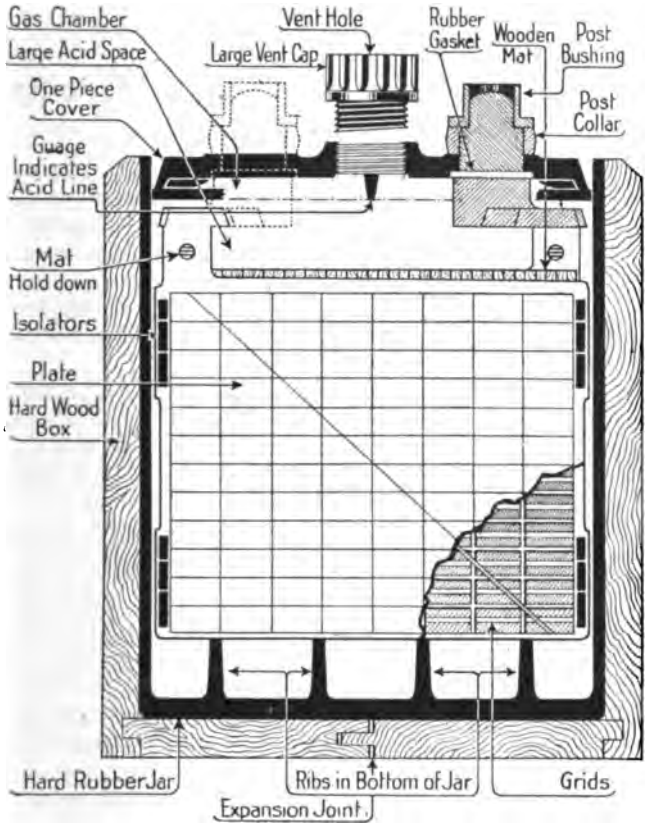
# Many Improvements in 1919 Vesta Battery

Many refinements are to be found in 1919 Vesta batteries, manufactured by the Vesta Accumulator Co., Chicago, Ill. The most noticeable improvement is the heavy one-piece cover with a soft rubber gasket seal. This absolutely prevents acid leakage around the cell terminals, it is claimed, as well as providing more acid space above the plates. The vent plug openings of



SECTIONAL VIEW OF 1919 VESTA BATTERY.

these covers are of ample size with coarse threads, which makes it easy to inspect and fill the batteries. A connector of new and pleasing design is a feature of the new batteries and all cells are assembled tightly in hardwood boxes without the use of sealing compound. This makes it possible to both assemble and repair the batteries in a much shorter time than formerly.

In view of the fact that it is almost a universal practice to open Vesta batteries by heating the sealing compound and pull out the entire group of plates from the jar with the covers left on, the company has designed the present battery with this in view. If the positive and negative groups of plates are to be taken apart the one-piece cover must be removed. This is quickly done by striking the lead collars that hold the cover in place a few blows on the side in one spot with a light 2 oz. hammer. This expands the lead collar a few thousandths of an inch and it is readily removed. The cover can be put back on and the same collars used again if the shoulder of the lead post is slightly expanded with a prick punch or awl before the old expanded collar is pressed on again. If this is not done the collars will not be tight enough on the posts to stay securely in position. This method of sealing the covers in place does away with the use of threaded posts and alloy nuts and depends upon the fact that two lead surfaces rubbing against each other tend to freeze and become a unit. These collars also build the posts up to a very substantial size and give a solid foundation for the connectors and terminals to rest upon.

The assembly of cells into battery boxes with a wedge fit allows a reduction in the overall battery dimensions. This advantage is partly made use of by making all boxes from 5/8 in. instead of 1/2 in. stock. Especial care is taken not to exceed the dimensions of the battery compartments of the cars. A new type of anchored wire handle is used whenever possible. This strengthens this part of the box. Three coats of acid-proof paint sprayed on improves the life and appearance of the battery box as a whole.

### VESTA THIN PLATE TYPE

An entirely new battery type has been added to the Vesta line which is known as the TU or thin plate U type. These plates are the exact size and type of the U plate type but 3/32 of an inch thick instead of 1/8 in. The spacing of the plates is closer so that 15 of these TU plates go into exactly the same jar that 13 of the U plates fill. Isolators with the proper spacing are used so that these batteries are insured against short circuit the same as batteries using thicker plates with the additional advantage of increased plate surface or cranking capacity.

---

### Annual Meeting of National Tire & Rubber Co.

The annual meeting of the stockholders of The National Tire & Rubber Co. was held at the offices of the company on June 11th, when a financial report of the year's business was read to the stockholders, showing that the company had enjoyed a very prosperous year, exceeding all previous records in sales and profits.

The stockholders authorized the sale of the remaining unissued capital stock, both common and preferred, as the initial step in a comprehensive plan for immediate expansion of the business. The expansion program as approved by the directors provides for the trebling of the output.

At a meeting of the Board of Directors, immediately following the stockholders' meeting, the following officers were elected: C. L. Merwin, president; S. L. Warner, vice-president and general manager; C. W. Helman, secretary; R. B. Taggart, treasurer.

At a special meeting of the board of directors held on June 14th, a contract was consumated whereby Mr. C. E. Miley became vice-president and general sales manager.

Mr. Miley has acquired a large financial interest in the company, and his vice-presidency in charge of sales, is an indication of the greatly increased volume of sales for which this company is providing. Mr. Miley has been associated for the past ten years with The McGraw Tire & Rubber Co.

It will be the policy of the company to confine the marketing of its products hereafter exclusively to the most representative jobbing trade throughout the country.

---

### John N. Willys Export Corp. Organized

The John N. Willys Export Corp. has been organized in New York City, with offices in the City Investing Building, at 165 Broadway.

This organization, through its New York headquarters, will direct export sales activities for a number of John Willys' various interests, chief of which are Willys-Knight and Overland motor cars.

## Champion Spark Plug Salesmen Hold Big Convention

The seventh mid-year sales convention of the Champion Spark Plug Company held in Toledo the week of June 9-15 was a record breaker in many respects, particularly from an attendance standpoint. Over 125 factory representatives of the Toledo concern answered present to the roll call on Monday morning.

F. B. Caswell, sales manager of the company, believes that a specialty salesman cannot know too much about the article he is selling. For that reason, he calls the Champion representatives together twice a year from all parts of the United States and Canada and devotes a week to coaching them on the finer points of salesmanship.

The convention program this year included regular business sessions every morning and afternoon at which officials of the company, heads of the different departments and a number of specialists in other lines of business addressed the men on various subjects relating to salesmanship. Other features were a trip to Detroit and inspection of the company's insulator plant located there; the breaking of ground in Windsor, Ontario, for the new quarter of a million dollar Canadian plant of the company, an athletic meet at Toledo Beach and various social functions.

The opening day, Monday, was devoted to talks by officials of the company. President R. A. Stranahan welcomed the men to Toledo and sales manager, Caswell, spoke on "Selling Without Misrepresentation." Robert Martland, secretary, California Trades Association, addressed the afternoon session followed by H. L. Corey, advertising manager and O. C. Rohde, chief engineer of the Toledo concern. In the evening, special cars were run out to the Toledo Yacht Club where dinner was served, the men getting their first glimpse of the huge arena built for the Willard-Dempsey fight.

Early Tuesday morning, the sales force left for Detroit. A fleet of motor cars met the men at the station and drove them out to the Jeffrey-Dewitt plant where the company's insulators are produced. A new leer, or tunnel kiln over 300 feet long was the chief center of attraction, although every step in the art of making porcelain proved a study in itself. After a luncheon at the Detroit Athletic Club, the delegation of salesmen crossed over to Windsor, where special cars were waiting to take them out to the site recently purchased by the company for its Canadian plant. Mayor Winter and a number of other Windsor officials were present for the ground-breaking ceremonies, the Mayor turning the first sod. The return trip to Toledo was made by boat, everyone enjoying the five-hour sail down Lake Erie.

Wednesday, the business sessions were resumed at the Champion Convention Hall. Lieutenant Commander J. B. Moots, medical chief for the company; Dr. C. B. Lundy, Superintendent Recreation Committee; Geo. W. Fritz, Field Secretary, Automotive Equipment Association and a number of others addressed the meeting. An athletic meet in which all members of the sales force participated was held at Toledo Beach late in the afternoon. This was followed by a barbecue luncheon on the beach.

Thursday was devoted entirely to business. Among the speakers not affiliated with the company were E. A. Hart of the Willys-Overland Company and Rice Wray of the New York Life Insurance Company. The big banquet of the week was held at the Toledo Club in the evening, the feature of which was the distribution of cash prizes awarded by Mr. Caswell to members of the sales force. Seventy-three prize checks totaling several thousand dollars were given to those who had shown unusual ability during the past year.

Friday and Saturday, the men were grouped for special class meetings supervised by the territorial managers. Saturday night saw most of the salesmen on their way back home.

## Vesta to Build Up-to-Date Service Station in Chicago

The Vesta Accumulator Co., Chicago, Ill., has purchased the building and land at the southwest corner of Michigan avenue and 29th street, now occupied by the Chicago Motor Club. The company will start immediately to tear down the present building and erect a service station which, as it is planned, will be one of the finest equipped and most elaborate of its kind in the world.

The purchase was made necessary by the large increase in business during the past year. The company had to have more room at its factory, 2100 Indiana avenue, and the entire service department will be moved to the new location in the near future.

With a frontage of 145 feet on Michigan avenue and 180 feet on Twenty-ninth street there will be 23,100 square feet of space devoted entirely to battery service. More than 100 cars can be accommodated easily at once. Cars will drive in the large entrance, receive service and drive out through an exit, both of which will be on 29th street.

In addition to complete equipment for charging and repairing and rebuilding batteries, the new station will contain tastefully appointed rest rooms for motorists. Special quarters will be provided for the ladies, with telephones, stationery, magazines and other conveniences. These rest rooms and the large show rooms will front on Michigan avenue.

"The purchase of this new site and the establishment of the boulevard service station," says W. S. Perry, general manager, "is a natural development of the business of the company, and we believe the increased satisfaction that will accrue to users of batteries and motorists in general, who are our patrons, will well warrant this substantial investment in good-will."

### Service Inaugurates Aerial Service

The Service Motor Truck Co., Wabash, Ind., is giving aerial service to its patrons. Recently one of the company's airplanes flew from Wabash to Zanesville, Ohio, via Akron, carrying contracts for the delivery of a Service truck to the Zanesville Provision Co. This is believed to be the first time such a contract has been delivered by airplane in this country. The flight was made via Akron in order to deliver some repair parts for a truck belonging to the Firestone Tire & Rubber Co.

### New Branch for Ahlberg

The Ahlberg Bearing Company announces the opening of a new branch in Pittsburgh. This is the third branch opened by this company within the past two months.

sertion of new advertisements or change of copy ot be guaranteed if received later than the 25th of month preceding the date of publication.

ACH cylinder of a gas engine is really an engine in itself and operates independently of the oth- except, of course, for the fact that it draws gas the same carbureter and derives ignition from ame source. An engine may develop high power be called large, yet, if it is made up of a lot of l cylinders it will possess, when in operation, all he characteristics of a small engine except, of se, that of low power.

nall engines tend to develop their power at high ive speeds. Large engines made up of many l cylinders, which are in reality small engines erything except power, possess this same char- istic. This is well illustrated by the perform- of racing car engines. The total piston dis- ement of racing engines is in most cases re- ted to 300 cu. in., so that while a four-cylinder an have cylinders of 75 cu. in. displacement, a e can only have cylinders of 25 cu. in. displace-

mparing the four-cyinder Peugeot car which the recent Indianapolis 500-mile race at an aver- peed of 87 m.p.h. with the twelve-cylinder Pack- it will be found that the engine of the former t 2050 r.p.m., while the engine of the latter ran er 3060 r.p.m., or almost half as fast again. At n.p.h. the Packard engine would run at 4000 and the Peugeot at 2750 r.p.m. Such a wide ion in speed obviously is not due to difference sign, but to difference in cylinder size. Both engines are designed to develop very high power, and while it is possible that one may develop a little higher maximum power, this would not make so wide a difference in the rotative speeds. The six-cylinder Hudson engine with cylinder intermediate between those of the Peugeot and Packard ran at intermediate engine speeds. At 87 m.p.h. it ran at 2670 r.p.m. and at 115 m.p.h. it would run at 3168 r.p.m.

The average gear ratio used on touring cars of today is lower than that of a few years ago. This is usually attributed to the fact that the use of larger valves, lighter pistons and the like has resulted in higher engine speeds, yet in reality this only partly explains the matter. The coming of the multi-cylinder engine is in reality a good deal responsible for this because, as already stated, engines with small cylinders develop the same power at higher rotative speeds than engines with large cylinders, and where the number of cylinders is increased the size has to be decreased to avoid making too large an engine.

It is stated that next year's Indianapolis 500-mile race will be confined to engines of only 183 cu. in. displacement. Whether any manufacturer will attempt to build a twelve-cylinder car of this size is yet to be seen, but in view of the excellent performance of the 300 cu. in. twelve, there is every reason to believe such an engine would be a success. Since the 300 cu. in. twelve attains speeds of over 4000 r.p.m., speeds of 5000 or 6000 r.p.m. may be expected of the small twelves of the future.

WHETHER the merchandising of airplanes will become another important field for the automotive dealer is still a matter of conjecture, but that at least one dealer thinks it worthy of a trial is shown by the following news items from Boston:

Airplanes for sale on the same basis as cars and trucks is now an accomplished fact in Boston. C. E. West, manager of the Stewart Truck Co. has leased the old camping grounds at Boxford and is building six hangars. That will be the training grounds for flyers and exhibition field.

Mr. West has received five machines, and five more are to be delivered before long. One plane is on exhibition in his salesrooms, where he will keep on hand a stock of parts and give service just as he does for the motor vehicles. The others will be housed at Boxford until sold and will be used in flying. Mr. West took the New England territory. He has sold one machine already.

Here is a live dealer who is not afraid to try an experiment. Who will dare say that his experiment may not prove a success? Two or three years ago not a few would have said that to fly across the ocean was impossible, yet now the feat has twice been accomplished.

THAT educational campaigns would do much towards preventing automobile accidents is the opinion of many. Such is the belief of the California State Automobile Trade Association, which has just sent a request to the California State Board of Education that traffic regulations be included in the studies of the eighth grade of the public schools of California as an added agency to public safety. Such a step it is believed would reduce the number of vehicle accidents. It is claimed in matters of this kind children can have more influence than parents.

# Our Metallurgist's "O.K." is Your Protection

So that the car or truck buyer may take pride in his car's stamina—endurance—great strength, Brown-Lipe Metallurgists stand as ever watchful sentinels at the steel mills—the drop-forging plants—at every source of raw or semi-finished material.

When the Metallurgist's "O. K." finally releases material for production, assurance has been made "doubly sure" that it is of the special quality for the purpose.

The fact that a car or truck contains Brown-Lipe Transmissions or Brown-Lipe-Chapin Differentials is evidence that the vehicle manufacturer has done his utmost to relieve the buyer from any future trouble with the two vital spots in the car's anatomy.

**BROWN-LIPE-CHAPIN CO.**
DIFFERENTIALS

**BROWN-LIPE-GEAR CO.**
TRANSMISSIONS

Both at SYRACUSE, N. Y.

**No. 1 of 40 Reasons for Superiority**

# Keeping Him "Sold"

Westinghouse values highly the opinion of the man who *rides* and the man who *reads*.

So not content with putting the highest quality into starting, lighting and ignition equipment, and furnishing service to the user, Westinghouse does still more.

In addition to its many selling forces that are founded on engineering ability, manufacturing experience and service, Westinghouse has another that is ever at work extending good will for the name "Westinghouse"—the force of advertising.

Westinghouse advertising is put every month before millions of motor car and motor truck owners or prospective buyers —which is one of the reasons why Westinghouse Equipment is so frequently "sold" before the car is sold.

*For your own protection and to keep valid the Westinghouse guarantee, use only Westinghouse repair parts, which can be obtained from authorized service stations in all parts of the country.*

### Joseph C. Weston Joins Ajax

Horace DeLisser, president of Ajax Rubber Co., Inc., announces the appointment of Joseph C. Weston to the post of vice-president and member of the directorate of Ajax Rubber Co., Inc. Mr. Weston, who for a number of years has been vice-president and director of sales of the United States Tire Co., was elected to his new office at a directors' meeting held June 17th.

Joseph C. Weston is one of the best known men in

JOSEPH C. WESTON, VICE-PRESIDENT AND DIRECTOR OF AJAX RUBBER CO.

the tire business, in which he has long been engaged. He comes to the Ajax Rubber Co., Inc., with an experience dating from the early days of the industry. Tire men remember Mr. Weston first as a salesman representing the old Morgan and Wright Co. His success in that capacity led to his appointment as Western Manager for United States Tire Co., with headquarters in San Francisco. From that post, Mr. Weston was made manager of the central district for the same company, with headquarters in Chicago. From Chicago he was brought to New York and made general sales manager. Then, in recognition of his ability, he was made director of sales and elected to the vice-presidency.

In his new connection Mr. Weston will work closely with Mr. DeLisser in matters pertaining to the general administration of Ajax affairs.

### De Palma in Packard Victor on Sheepshead Speedway

Ralph De Palma, driving a 12-cylinder Packard, won the International Sweepstakes on the Sheepshead Bay speedway, June 14, covering the 50-mile course in 26:23:4, and establishing a new record for the track of 113.76 m.p.h. Ralph Mulford, in a 4-cylinder Frontenac, and Tom Milton, in a 4-cylinder Duesenberg, made local records in the 30 and 10-mile events, their times being, respectively, 16:01:20 and 5:20:20. Mulford also carried off the honors in the special 10-mile race.

Dave Lewis came in second and Joseph Boyer, Jr., third in the 50-mile event. Ralph Mulford was in second place and De Palma in third in the first race, a 10-mile event, which Tom Milton won. De Palma made second place and Joseph Boyer, Jr., again third in the 30-mile run, and in the special 10-mile event, which was won by Mulford; Joseph Boyer was second and Ralph De Palma third.

### Acme Company Announces Connections in Scandinavian Countries and Mexico

The Acme Motor Truck Co., Cadillac, Mich., has appointed the Aktieselkabet Autocar Co. of Copenhagen, Denmark, distributors for Acme trucks in Denmark, Norway, Sweden and Finland. Frantz Nehammer is president of the new company and several shipments have already been made there. This connection was formed through the "All" Trading Corp. of Chicago, Acme export distributors.

The Acme Co. is now represented in Mexico by Gmo. Verduzco and Co., Avenida Juarez. Conditions in Mexico are not "exactly normal" just now, but in spite of that fact business is opening up in good shape.

### Garford Truck Hauls 20,000 Champion Plugs From Toledo to Detroit Daily

That inter-city transportation by motor truck is daily becoming a greater factor in industry and business is indicated by the increasing number of installations reported.

Among the latest manufacturing concerns to establish a daily inter-city service is the Champion Spark Plug Company, of Toledo, Ohio.

Utilizing a Garford two-ton truck, this company is delivering 20,000 spark plugs a day to a Detroit automobile manufacturer. The truck leaves the Toledo factory at 7:30 o'clock each morning on its 68-mile trip. After delivering the shipment of spark plugs, the truck is loaded with porcelain insulators at the Champion Spark Plug's porcelain plant in Detroit and returns to Toledo.

Including the time required in loading and unloading, the round-trip of 150 miles never takes more than 10 hours and usually is completed in much less time, it is stated. Records of the company show that the Gar-

GARFORD TRUCK USED FOR INTER-CITY SERVICE BY CHAMPION SPARK PLUG COMPANY.

ford truck with a capacity load averages 10 miles per gallon of gasoline and 470 miles per gallon of oil.

The trips are made over the famous Detroit-Toledo automobile highway, which lately has become one of the greatest motor truck routes in the country. Scores of trucks ply back and forth between these two cities on a regular daily schedule, serving a wide range of businesses.

That the motor-truck method of transportation is being found practical for this inter-city trade is evidenced by the increasing number of merchants and manufacturers who are adopting it. Recently motor truck and cartage firms in both Detroit and Toledo organized associations and established central offices to properly care for growing demands for truck transportation.

# Repair Engineering*

*By DAVID W. ONAN*

THE Society of Automobile Engineers changed its name to the Society of Automotive Engineers to take in the large class of trained men in the internal-combustion engine industry. There is no doubt that the change was made at an opportune time and contributed in large measure to the wonderful co-operation in production and development reached during the war.

The change in name has resulted in greater expansion of the Society by bringing together the personnel of the automotive industry, and great progress has been made in joining up engineers from the automobile, the tractor, the truck, the marine, the aeronautic and the commercial fields, but no mention has been made of the repair engineers. Indeed, considerable has been done to camouflage the members of this branch of automotive engineering. They appear under several different headings, such as service engineers, maintenance engineers and traveling engineers. Nevertheless, a large and important department of repair engineering exists.

As time passes models of automotive appartus become obsolete, and methods get out of date. An engineer's job is to develop new models and methods and to overcome the disadvantages of the old in the new. That is understood, but what becomes of the old model? Does it cease to exist immediately on the introduction of the new, or does someone still know that is was produced, sold, bought, operated and held in the mind of its owner as dollars and cents, just as it was the day the purchase was made? Is the free-minded American to be expected to cast the old model aside and forget it and the money he has paid for it, just because someone has produced a new model? We are luxury-loving and extravagant, but it is doubtful whether we have reached that point. Is the owner foolsh in expecting to find someone in the automotive industry who will say as he does, "She has her faults, but she's a good old car, anyhow?"

The engineers and manufacturers who put out the old models are already busy on new ones. The men who sold the former models are now selling newer ones. Who is to see to it that the still good-enough car is kept in repair? It will not run on like the days and nights without attention. If it was troublesome at the start it will get worse with use. It must not only be kept in good repair but maintain the appearance we describe as "well-preserved."

### THE REPAIR ENGINEER

Let us see what repair engineering is and who the repair engineer is. Look through the catalogue of any university or technical school and see if you find repair engineering mentioned. It is not taught. It is accumulated. The man who fills in the gaps I have disclosed is usually a very good engineer. Frequently he is a better man than the designing engineer whose work he studies, adapts, modifies, adjusts, strengthens and otherwise "fixes up." He has had long and broad experience. Some of the earlier models ran to 80 per cent. breakage.

Let us see what exists in this maintenance field that could be overcome by a thorough understanding between the S. A. E. and the so-called repairman. Let us take some recent recommended practice of the Society, covering something that has been used for several years and on a great many makes of cars. Take the leather disk magneto coupling. This, when new, can be made perfect, but leather ages and rots, softens and breaks; yet it is now up for consideration as a standard. In one repair organization alone in 3 yr. at a low estimate not less than 1000 bearings and over 400 armatures for both magnetos and generators were replaced, where the direct cause of failure was this type of coupling.

Another example is the inboard type of automatic gearshift on starting motors. On this particular installation, which is now past its third year, we find the drive shaft commonly used on starting motors is ¾ in. and to attach the automatic gear mechanism a ⅜-in. hole is drilled just outside the drive end-bearing, and on the shaft at this point is placed a collar of 1⅜-in. dimension through which also the ⅜-in. bolt is passed. On thirteen out of seventeen installations of this type of mounting trouble was encountered as follows: Broken shaft, broken casting. Cause not "back-fire" but the stopping of the car on an incline. Flywheel gear caught the pinion in rocking. Another repair was made for the same cause, but as sleeve-type mounting had been used, the housing had to be opened to loosen the starting motor. The casting was broken, split and wedged. One other sleeve-type mounting was rusted and damage to the sleeve casting occurred in removing it. The starting motor was dis-assembled and a puller made to draw the support casting. The castings were welded and reinforced; the drive end-bearing was enlarged to 1¼ in.; the shaft was made accordingly, and the sleeving of the broken shaft was double-pinned, thus doing away with the collar and making a permanent job without new factory parts.

I ask, was not this engineering?

When models are brought out requiring not more than 20 minutes to remove any piston or tighten any connecting-rod; 10 minutes to remove the carbureter, the water-pump, the generator, the starting motor or magneto; 20 minutes' work on any clutch; 30 minutes on a rear axle, transmission, steering-gear or to remove the engine, the repair engineer's burden will be lighter. We shall still be a long way from the time when his services will not be needed at all. Neither he nor the automotive engineer in any branch need worry.

Why not design models that can be repaired? The automotive engineer has made great progress and great credit is due him for his wonderful achievements. He is here to stay. The repair engineer also has been here a long time. He has not stood still, although he has kept still. Let us remember that the war is over and look at him in peace as in war, and get closer together. There is something to it.

*Paper read before Minneapolis Section of S. A. E.

# Prest-O-Lite Gives Novel Service at Indianapolis Race

A UNIQUE courtesy at the recent Indianapolis motor races answered the questions of "Where Do We Eat?" and "Where Do We Park the Car?" Service men of the Prest-O-Lite Company acted as hosts on the day of the races. They issued invitations to their patrons entitling holders to a parking space and box luncheon without charge.

The parking space was near but outside the speedway grounds in a special wired enclosure. Spectators walked from the grounds, got into their cars and made a quick get-a-way. This feature was a boon to people who had been caught at other races in the jam of congested cars.

Service men attended to any battery troubles while their guests were at the races.

A box luncheon was presented to every holder of the Prest-O-Lite invitation. The neat box, brightly marked was in keeping with the occasion and saved patrons the fuss of a basket luncheon. All boxes were packed in the model white enamel kitchen of the Prest-O-Lite factory. Each contained luncheon for two people and consisted of 2 apples, 4 sandwiches, 2 eggs, 2 pastries, pepper, salt, and napkins.

KITCHEN OF PREST-O-LITE COMPANY WHERE LUNCHEON WAS PREPARED FOR GUESTS.

It was easy to find the parking space for the Prest-O-Lite tank stood up in the sky as a 100 foot beacon to motorists approaching the Speedway.

The up-to-date kitchen in which luncheon was prepared for the company's guests is shown in the accompanying illustration.

THIS 100 FT. SKY-SIGN WELCOMED PREST-O-LITE GUESTS TO THE SPEEDWAY.

### Carburetor Has New Maker

The Beneke & Kropf Mfg. Co., Chicago, has succeeded the Findeisen & Kropf Mfg. Co. and will make the Rayfield carbureters formerly made by the latter concern. With the reorganization of the company, plans for the material expansion of manufacturing have been formulated. Henry Beneke, formerly vice-president of Hibbard, Spencer, Bartlett & Co., has purchased the entire interests of Frederick Findeisen and becomes vice-president and treasurer of the reorganized company. O. F. Kropf remains with the company as active president, and E. A. Bates continues as director of sales and advertising.

### White Plans New Cars

D. McCall White, formerly vice-president of the Cadillac Motor Car Co., has opened a temporary office in Detroit. He is actively engaged in getting out the preliminary designs for a new car which he is going to manufacture. The location of the plant in which it will be produced has not been definitely determined.

Robert Marcus, formerly with the American Bureau of Engineering and later with the Willard Storage Battery Co., has been put in charge of the battery service station equipment department of the H. B. Shontz Co., which has just been appointed Metropolitan distributors of all Ambu products, manufactured by the American Bureau of Engineering.

The Frederickson Axle Co., Benton Harbor, Mich., has purchased the Cutler warehouse here, where it will locate its plant, employing 40 to 50 men.

The Gier Pressed Steel Co., Lansing, Mich., is increasing its night force and will boost night production. Day production was up to capacity several months ago.

HE creation of a bureau of farm machinery as one of the divisions of the Department of Agricul- is understood to be under consideration by De- nent officials. It is likely within a very short that the Department will be reorganized again, so eak, on a peace basis, at which time the office of 1 Equipment Control will cease to exist.

) more appropriate time could be found for the nization of such a bureau within the Department. war has brought the Department into closer rela- with the industry than ever before existed, to the al advantage of each. There was a time not long when there was little contact between this Depart- and the great industry which vitally concerns one engaged in agriculture. At present, aside the office of Farm Equipment Control, purely a body, farm machinery is but a minor division of Bureau of Farm Management.

rtainly farm machinery is of as much concern to farmer as the Bureau of Animal Husbandry, Bu- of Plant Industry and numerous other recognized r divisions of the Department. This can be said out disparaging the work of these other important aus in the least.—*Chilton Tractor Journal.*

---

WAITING for something to happen" is not one of the axioms of the motor industry. In no departments of big business is there such cour- and optimism. The determination to push ahead r than to await a clearer outlook is characteristic ne automobile builders. They have always been strial pace-makers, stouthearted men of vision, pos- d of courage and fervent in their faith in the e of their industry.

ore and more is the conviction spreading that not nonths to come are we to witness any substantial ring of commodity and wage prices, and that to sit by, with folded hands, is but to paralyze and stifle stry. In times like the present, when there is such ad center between hope and fear, it requires only a bold declaration to break the deadlock and re- gize the flagging spirits of our business leaders.— *on News Bureau.*

---

OBABILITIES that races of 1920 will be largely limited to cars of little more than half the dis- ment of those at present will be greeted with much action by the industry as a whole and by motor lealers in particular. Most care now on the mar- ave a displacement considerably less than the 300- n. limit of present-day races. The 3-liter cars, 1 it may be assumed may make up the greater rtion of next season's new speed developments, are in size not far from many of the vehicles on the open market which dealers are handling. There should be more talking points for dealers as a result of small-car races.

Considerations of economy in the first cost and operating expenses make quite advisable a higher development of the cars of smaller displacement. Carl Fisher, who is credited with sponsering the 3-liter size for next year may, of course, not be wholly unaffected in his decision by the fact that such a limit for Indianapolis next year would bring a larger entry from Europe by adding the new cars being built for the French Grand Prix. But the effect on American car development certainly will be good, because the 300-in. cars have had their innings for several years and racers of that size can be relegated to their stables along with the old 500-in. and 600-in. racers of the past.—*Motor Age.*

---

DON'T be disappointed if things don't always come out right. Life can't all be made up of comedies.

There's just one reason why a rat terrier catches rats better than other dogs. He keeps after the rats!

The salesman who keeps working doesn't worry. His competitor does that.

Keeping on your job doesn't mean "sitting" on it.—*Russell.*

---

MORE than fifty per cent of a service station's complaints on repair work can be eliminated if cars are delivered in a clean and orderly condition. A customer secures his first impression of a repair job by the external appearance of his car. This is a fact which all service managers should take into account. While a job may be perfect mechanically, if the car is dirty and the controls are covered with oil, it leaves the customer in a disgusted frame of mind and the good work of the repairshop is lost.

A car clean-up man on the service floor is a good investment. Let him clean up every car. Wipe off the cushions, controls, fenders, etc., in fact, give the car a good going over, so that it will have a presentable appearance. If you haven't a porter, try one and see how much smoother your service station will run. Some shops even go as far as washing every car before it is delivered to the customer and throw the expense involved into the service overhead.

Nearly every owner likes to boast about his car. It is a trait of human nature. Good, clean repair jobs promote satisfaction among a concern's clientele. It is one of the simplest methods of increasing the scope of a service business. Make more owners boasters.—*Motor Age.*

## Complaint Against Pan Motors

The Federal Trade Commission has issued a complaint against the Pan Motor Co., St. Cloud, Minn., and the president, Samuel C. Pandolfo, charging him and the company with having sold stock worth $4,723,111 and deceiving the public by circulating false statements and unfair advertisements regarding the assets and resources of the company. They claim there were 54,000 recorded subscribers of stock of whom 39,000 have paid the subscriptions in full.

The Auto Wheel Co., Lansing, Mich., is now approaching capacity production. The company is producing 450 sets of wheels daily.

## Plans for 150,000 Fordsons

Henry Ford & Son plans to produce approximately 150,000 tractors during the fiscal year, which commenced June 1, 1919. The plant has been in operation 14 months and on May 1, the date it closed down for inventory, it had made 53,078 tractors. Inventory work was completed June 1 and the company is back in production. Approximately 100 tractors were run daily this week, and before the middle of June the daily output will be between 300 and 400 machines. Orders have been received from France, England and Belgium for 1,000 tractors.

## Martin-Parry Merger

The Martin Truck & Body Corp., York, Pa., and the Parry Manufacturing Co. of Indianapolis, Ind., both commercial car body makers, have merged as the Martin-Parry Corp. John J. Watson, Jr., is chairman of the board, and other directors are: Guy E. Tripp, Westinghouse Electric & Manufacturing Co.; James F. Shaw, Knauth, Nachod & Kuhne; F. M. Small, former president of the Martin Truck Co.; Robert I. Burr, S. C. Parry, Parry Manufacturing Co.; Walter R. Herrick, Herrick, Berg & Co., and George R. Walbridge, Bonbright Co., Inc.

## Stromberg Financial Report

The Stromberg Carbureter Co. of America, Inc., New York City, holding company of the Stromberg Motor Devices Co., has just published its annual report for the fiscal year ending Dec. 31 last. Net profits of $279,097 are shown, as compared with $318,819 of the previous year. The profit per share is $5.58, as compared with $6.37 in 1917, on the 50,000 shares of no par value.

The income of the Carbureter company consisted of $350,628, the net earnings of the Motor Devices company and $21,742 other income, a total of $372,368. The deductions are $70,392 for Federal taxes and $22,879 for other taxes and sundry expenses. In this report no provision is made for the 1919 taxes because the Federal rate was not known at the time the books were closed.

The Motors Devices Co. report shows sales for the year of $2,160,373 and operating profit of $384,781. The added income was $6,817, making total income $391,598. Charges of $40,972 were deducted for taxes, etc.

## Detroit Seamless Tube Plant Started

The Detroit Seamless Steel Tubes Co., Detroit, Mich., has begun construction of a $3,000,000 plant on a 60-acre tract on Warren Avenue. The first section, costing $1,000,000, will be completed by Jan. 1. The company's present location has been sold to the Pennsylvania Railroad.

## Prest-O-Lite Gas Saves the Day for Newspaper

The following story tells how a Memphis, Tenn., garage helped to tide over the difficulties of a local newspaper.

To fully appreciate the importance of an ample gas supply in the printing of a daily newspaper, it is necessary to see the large quantity consumed in any modern typesetting room for melting the type metal.

The Memphis Press ordinarily depends upon the city gas supply for this purpose, hence there was great consternation one day in the offices of this publication when the city gas supply failed for a period of several hours. An hour is an eternity in the newspaper business. Time is reckoned in minutes and even in seconds.

The emergency called for the immediate installation of a substitute gas supply. It was quickly decided to use acetylene for the purpose. Acetylene is easily obtained in convenient form in metal cylinders in almost any locality, and produces a very hot flame suitable for quickly heating the metal melting pots in the typesetting machines. Compared with other gases commonly used for heating purposes, acetylene has a much greater heating power. It contains three or four times as many heat units per cubic foot.

Acetylene in cylinders produced by the Prest-O-Lite Company is known as Prest-O-Lite gas. The cylinders are supplied in different sizes, the smaller ones being used extensively for automobile illumination, as every dealer knows, and the larger ones for oxy-acetylene welding and other industrial purposes. They embody a scientific principle which permits storing an enormous quantity of acetylene in a phenomenally small space. For instance, as much as 300 cubic feet of acetylene is contained in a cylinder which has a volume of only two or three cubic feet. The explanation is found in the fact that the liquid acetone (one of the products of the distillation of wood) has the ability to absorb acetylene much the same as water dissolves sugar. At ordinary atmospheric pressure and temperature acetone will dissolve about 24 times its own volume of the acetylene, and for each additional atmosphere of pressure to which it is subjected a similar quantity will be dissolved. As Prest-O-Lite gas is supplied under a pressure of about 17 atmospheres (250 pounds per square inch) the feasibility of storing so much gas in such a small space will be apparent. Prest-O-Lite cylinders are completely filled with a porous material, such as asbestos; this is saturated with acetone, after which the acetylene is dissolved under pressure.

As the pressure in the cylinder becomes reduced, due to the withdrawal of the gas, the acetone's absorbing power likewise diminishes, insuring a steady liberation of gas. The gas flow is easily regulated by means of a reducing valve which also delivers the gas at a low pressure suitable for the purpose for which it is being used.

The Memphis Press called upon the Quality Motor Car Company and the Metal Welding Company, both of Memphis, for acetylene to tide it over its difficulties. The former sent two small automobile Prest-O-Lite cylinders and the latter supplied a large cylinderful of the gas. These were put to work immediately and the paper soon appeared, making acknowledgement for the timely aid received in the following heavy type headline: "This emergency edition of The Press is printed with the help of Prest-O-Lite gas."

### De Lisser Condemns Trade Pirates

"When an industry meets with rapid growth, as pneumatic tire manufacture, it attracts charlatans and fakirs, who exploit promises of performances which cannot be made good," says Horace DeLisser, president of Ajax Rubber Co.

"Ultimately industries free themselves of those who seek to fatten without giving value for the tax they impose. Though one is cut down, another springs up. The past winter has been a busy one for so-called 'tire gyps,' following the Government's curtailment order of last fall. With the passing of years, industries become free of such molluscs.

"Rarely is there ingenuity or change in the programs of the fakirs. The generally adopted form is to trade upon well known and strongly advertised names of standard tires, offering prices which cost of manufacture could not permit in the name of good business.

"If a tire fakir is more bold he attempts to organize a new tire business, selling stock, and offering special prices to stockholders for their tire requirements. Despite the fact that a comparatively few manufacturer produce 99 per cent of tires required, and that tire manufacture is only profitable when the volume of tire sales is very large, persons without rubber or manufacturing experience ply their trade in shares of stock of doubtful value.

"The time has come for the public to know that the tire business is going through that same transition stage, which every industry meets, and when elimination of the most unfit takes place.

"Thus in the farm implement business there were once several hundred manufacturers, whose total volume was relatively small. Only a few have survived, but their growth of influence has been a thousandfold greater than the combined efforts of the larger number.

"So it is in the manufacture of tires, when the needs of motorists are more and more being supplied by those manufacturers who have established their products, through merit and advertising to be standard equipment for cars.

"The dishonest practices of the tire 'gyp' who has no right to do business or consideration from the public, fool the unwary. The deceits are all old and shop-worn. The scrap casing masquerading in a new 'overcoat' tread is still an old casing with its life gone and its usefulness done.

"One is always exposed to risk of personal concern in issuing such a warning as this, but at this time when a new touring season is at hand, such words of warning need to be said."

### U. S. Rubber Offers Common Stock to Employees at $70

Employees of the United States Rubber Co. have been offered the chance to purchase common stock of the company at $70 a share. It is now selling on the market for $95. Employees will be given 5 years in which to pay for subscriptions.

### Building Factory for Transport Truck

Work on the new plant of the Transport Truck Co., Mt. Pleasant, Mich., has commenced. The buildings will cost $150,000 and will be ready for operation before the end of the year.

# TRADE GOSSIP

J. L. Justice, who for the past three years has been zone supervisor for the Maxwell Motor Co., Detroit, resigned to become general sales manager of the National Wire Wheels Works, Inc. He will have his office in the Book Building, Detroit.

C. E. Wilson, formerly of the Westinghouse Electric & Manufacturing Co., has been made manager of the motor equipment division of the Remy Electric Co., and will have charge of engineering and sales with headquarters in Detroit.

Joseph Leopold has resigned as sales manager for the Jones-Motrola, Inc., to become sales manager of the Trego Motors Corp.

Asher Golden has been appointed by the Compagnie d'Applications Méchaniques, Paris, its exclusive agent in the United States for the sales of RBF bearings and retainers.

Miss Ruth Edwards, who has been treasurer of the Bantam Ball Bearing Co., Bantam, Conn., for the past three years, has resigned her position. She has been with the company for twelve years.

J. W. McCabe, formerly district sales manager of the Chicago Pneumatic Tool Co. at Buffalo, has been made special representative for that company's foreign trade department, and is about to make a trip through the Orient.

George W. Rowell, newspaper man, and formerly scretary and manager of the Upper Peninsula Development Bureau, has been made publicity and advertising manager of the Lloyd Mfg. Co., Menominee, Mich.

S. A. Schaeffer, foundry superintendent of the Fairbanks-Morse Co., Three Rivers, Mich., has resigned to become assistant superintendent of the Clarage Fan Co., Kalamagoo, Mich. He is succeeded by B. C. Page of Spokane, Wash.

F. L. Sanford will be in charge of the New York branch of the Dort Motor Car Co., Flint, which will be opened shortly in the Ehret Building, Fifty-eighth Street and Broadway. Mr. Sanford was for several years manager of the Studebaker branch in New York.

E. H. Beacham, assistant to A. C. Barley, president of the Barley Motor Car Co., Kalamazoo, Mich., has resigned and gone to Chicago to accept a post with the Waldon W. Shaw Co., operating the Shaw Taxicab Co. and the Yellow Taxicab Co. He has been acting as general sales manager during the past six months. His successor has not been named.

Clarence V. McGuire has been appointed general sales manager and advertising director of the Carlisle Cord Tire Co. Until now he has been vice-president of Van Patten, Inc., advertising agency. In entering the company he becomes a director of the organization and a member of the executive board.

Harold W. Woodworth, who has been in the Boston office of the Ahlberg Bearing Co., Chicago, will be in charge of the new office of the company at 511 Westminster Street, Providence, R. I.

Bruce E. Anderson, formerly with the Ideal Engine Co., has become general manager of the Lansing Body Co., succeeding Frank Thoman, who retires as manager but continues as a member of the board of directors.

R. S. McLaughlin, president of the McLaughlin Motor Car Co. and a vice-president and director of the General Motors Corp., has been elected president of the newly organized General Motors of Canada, Ltd., which has a capital of $10,000,000.

L. P. Helm, for two years in charge of production of the Olympian Motors Co., Pontiac, has resigned to become production engineer of the Chief Motors Corp., Port Huron, Mich.

J. H. McMillan, advertising manager of the Mueller Metals Co., Port Huron, Mich., has resigned, to take effect June 15. His future plans have not been announced.

Otto Bruenauer, formerly director of sales and engineering of the U. S. Ball Bearing Mfg. Co., Chicago, has resigned. Otto Bruenauer and Howard L. Spohn became identified with the U. S. Ball Bearing Company in January, 1917, and with Walter H. Strom had charge of the plant. As a result of reorganization and changes in policy consequent upon the death of Walter H. Strom in January, 1919, Spohn resigned as commercial manager in May, Bruenauer's resignation following.

Mark L. Requa resigned recently as director of the oil division of the U. S. Fuel Administration. Mr. Requa's departure marks the disbanding of the oil division, which controlled the production and consumption of oil, including gasoline, during the war.

George W. Parks has been elected president and general manager of both the Maxwell Motor Co. of Canada, Ltd., and the Chalmers Motor Co. of Canada, Ltd., Walkerville, Ont.

### McGraw Employees Get Common Stock

At a recent meeting of the board of directors of the McGraw Tire & Rubber Co., an appropriation of common capital stock of the company was made and set aside for the benefit of employees.

According to the plan of distribution, the stock may be purchased by employees for cash or on deferred monthly payment. As soon as subscribed and the first payment is made on the stock, all cash dividends are credited to the subscriber's account as additional payment until the entire amount of the stock is paid, after which, dividends earned will be paid direct to the employee.

Another advantage of the plan of distribution is that the Company's Employees' Stock Department will extend time of payment in case of inability to meet assessments due to accident, sickness or other unavoidable cause. The stock being offered to employees is non-assessable, and is sold at the par value of $50.00 per share.

The company has also developed plans for the establishment of an employees' park. A large tract of land near the factory, with plenty of water facilities, has been purchased. Swimming, boating and fishing facilities will be provided, besides general athletic fields and golf course.

### Price of Acme Trucks Increased

Acme Model C 3½-ton and Model E 5-ton trucks have each been increased in price $100, according to an announcement of the Acme Motor Truck Co., Cadillac, Mich. The Acme 3½-ton truck of improved design is now in production. This truck is equipped with a pressed sheet heat-treated frame instead of a channel section. It is equipped with a Continental E 7 motor with flywheel inclosed. These improvements, with others, are accountable for the increase in list of $100 on this model.

The Acme 5-ton chassis Model E has been repriced on an actual cost basis, this being practically the first year of production on this model, the price quotation heretofore having been nominal.

Mr. C. J. Helm, Secretary and Sales Manager, of the Acme Motor Truck Company, announces that the first five months of this year show a marked increase in sales over the same period of any previous year in the company's history, making necessary a largely increased schedule of production for the balance of the year. The Acme body building department is being taxed to its capacity, producing bodies which are used exclusively on Acme trucks. A very satisfactory foreign trade is now being established on the Acme line in addition to the domestic distribution being considerably reinforced so far the present year.

### Swander and Utz Become Vice Presidents of Standard Parts

Two men prominent in The Standard Parts Co. organization, have been promoted to vice-presidencies. They are Dan C. Swander, supervisor of sales, and J. G. Utz, supervisor of engineering, headquarters for both of whom are at the executive offices of the company in Cleveland.

Both men have been with Standard Parts from its beginning. Mr. Utz was formerly director of engineering in the Perfection Spring Co. and Mr. Swander was well known to the trade as eastern sales manager of The Firestone Tire and Rubber Co. prior to his present connection.

### New Car and Tractor

The L. M. Heifner Manufacturing Co., Philadelphia, with L. M. Heifner at the head, is being formed with a capital of $1,500,000, to manufacture cars and tractors. An option dating from July 1 has been taken on a building in Chester, Pa., having 100,000 sq. ft. of floor space, and operations are expected to begin by August 15. The tractor to be made will be composed of standard units, especially suitable for small farms, and will cost $1,000. It will be designed to be used with a 2-bottom plow, having a clearance of 27 inches. Production of 3,000 the first year is the goal.

All types of passenger cars are planned, having the following specifications: aluminum body, Continental Red Seal engine, 128-in. wheelbase, Bosch magneto, Brown-Lipe transmission, Borg & Beck clutch, Spicer universals, Timken axles, Parish & Bingham Co. frame, Perfection springs, Stewart vacuum feed, Fedders radiator, Delco starting and lighting system. The color will be optional.

### Government Needs More Stenographers

The Government is in urgent need of a large number of stenographers, typists and bookkeepers in Washington, D. C.

Usual entrance salaries are: Stenographers $1,200, typists $1,100, bookkeepers $1,100 and $1,200 a year, aside from any temporary bonuses allowed. Higher salaried positions are usually filled through promotion.

The Government constantly maintains a list of available rooms in private houses in Washington, and conducts attractive residence halls to accommodate a limited number. Living conditions are considerably improved.

Full information and application blanks may be obtained from the Secretary of the Local Board of Civil Service Examiners at the post office or customhouse in any city.

### Long Wear Acquires Another Tire Factory

The Long-Wear Rubber Co., of Elyria, Ohio, has taken over the entire production of sales of The Quality Tire & Rubber Co., of Anderson, Ind., makers of "Quality" cord and fabric tires.

This adds a daily capacity of 2,000 casings and 2,000 tubes of the Long-Wear production, which is now several hundred per day in Elyria and will shortly be increased by a substantial addition to the Elyria plant.

Both factories will be under the personal supervision of Frank W. O'Brien, general manager of the company with headquarters at Elyria.

Plans for expansion now under way contemplate a total daily production of 20,000 pneumatic and solid tires and the manufacture of boots and shoes and general rubber goods.

### Le Bourveau

L. G. LeBourveau has retired from his position as secretary and sales manager of the American Electric Co., Chicago. He will go South to engage in the automobile accessory business, having offices at Atlanta, Ga., and Jacksonville, Fla.

### U. S. Rubber Helps Subsidiary

The United States Rubber Co. will spend $3,000,000 this year in extensions and equipment to the works of Morgan & Wright, its subsidiary in Detroit.

# MANUFACTURERS' NOTES

ıe International Harvester Co. has purchased Chattanooga Plow Co., maker of chilled plows. Chattanooga Plow Co. was formed 40 years ago is being operated by the founders. Its plant rs about 3½ acres of a 7-acre site.

ıe Northway Motors Corp., one of the General ›rs units, is averaging 580 automobile engines . The company is also making engines for the pson tractor. Approximately 400 engines are ; turned out daily for the Oakland Motor Car 150 for Olds Motor Works and 30 for the Cole ›r Car Co. It will be nearly one year before the ling program, recently outlined for this com- , goes into effect.

ıe Oneida Motor Truck Co., Green Bay, Wis., the end of the war has more than doubled its uction and increased its sales by 130 per cent. ng May salesrooms were established at Balti- , Denver and Sioux City.

ıe Briggs & Stratton Co., Milwaukee, Wis., will ge its productive facilities approximately 100 ent at a cost of nearly $500,000. Ground will roken early this week for a 5-story fireproof ry building, 60 by 185 ft., duplicating the pres- actory, erected about three years ago. In addi- a new office building, laboratory and engineer- building, 69 by 120 ft., 4 stories high, will be . The new facilities will be available by Oct. 1.

ıe Smith-Davis Machinery Co., Market and 21st ets, of which Mr. Heifner is general manager, represent the new line in Eastern Pennsylvania, Jersey, Delaware, and part of Maryland.

ıe Moline Plow Co. is building a foundry at Moline to cost $275,000. The contract calls for completion of the structure by October 15. The ling will be two stories, 120 by 380 ft, of rein- d concrete and steel. Tractor and agricultural ement castings will be produced at the new .

ıe Kalamazoo Motors Corp., Kalamazoo, Mich., al $250,000, fully paid up, has bought out the cal assets of the Lane Motor Truck Company vill continue to manufacture the same model trucks the name "Kalamazoo." The officers of the any are: H. A. Crawford, President; C. J. John- Vice-President; Wm. B. Milham, Treasurer; R. M. ry, Secretary.

The Chandler, Grant and King cars will in the future be equipped with Prest-O-Lite lighting and starting equipment, according to an announcement of the Prest-O-Lite Co.

H. L. Hall has resigned as Chicago branch manager of the Swinehart Tire and Rubber Co. He will take charge of the Chicago office of the Troy Carriage Sunshade Co., manufacturers of Troy windshields and specialties with which company he was connected for eight years prior to becoming associated with the Swinehart interests.

The Chicago office of the Troy Carirage Sunshade Co. is located at 20 East Jackson Boulevard.

The Standard Parts Co. has taken office space at 1006 Times Building, New York City, where Mr. W. A. Paxton will represent the company in the eastern territory for the sale of Stanweld products. The company's products were formerly handled in this territory by Mr. L. D. Rockwell.

The Fulton Truck Company of New York, which has been located at 1800 Broadway on Columbus Circle, has moved to 240 West Fifty-ninth Street, just east of Broadway, where it has a much larger salesroom for the display of Fulton trucks.

The Dearborn Truck Co. announces the appointment of the Wm. H. Ranken Co., of New York, Chicago and Washington, as its advertising representatives.

The H. B. Shentz Co., Inc., 157 W. 54th Street, New York City, has been appointed distributors for the Shuro cell tester, a device for testing storage batteries.

The Machine Tool Engineering Co., 149 Broadway, New York City, will be the sales agent for the Smalley General Co., Bay City, Mich., in New York and New England territory.

Stronghold fabric tires, manufactured by The Rubber Products Co., Barberton, Ohio, are now guaranteed 7,500 miles on Ford sizes and 6,000 miles on all other sizes, according to an announcement of the company.

The Detroit Culto-Tractor Co., Detroit, Mich., a new company incorporated at $1,500,000 for the manufacture of a farm tractor to sell at $755, has leased the Indian Village garage on Jefferson Avenue, and is converting it into a manufacturing plant.

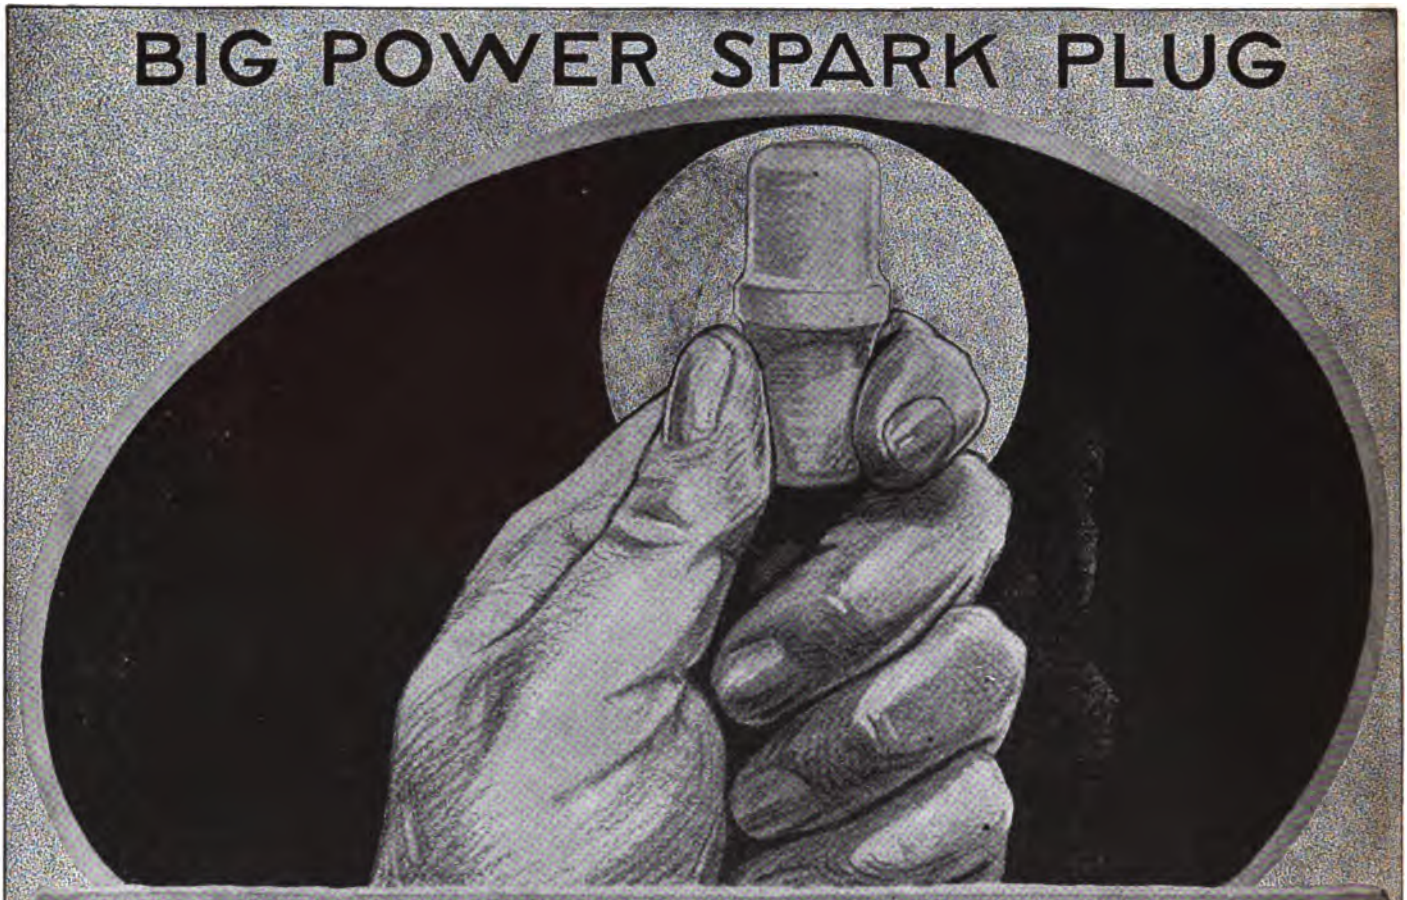
# National

## BIG POWER SPARK PLUG



## STONE INSULATOR

THE NATIONAL Stone Insulator is made of an entirely new *basic material.* It is practically unbreakable —not affected by extremes of heat or cold—heat proof—impervious to oil—oil proof—compression tight. The National Tractor Special—equipped with Big Stone Insulator—and oversize electrodes of extra heavy wire, designed especially to ignite low grade oils that have a tendency to slow, lazy ignition —is positively unequalled for durability—economy of fuel—positive ignition and steady, satisfactory service under the heavy duty requirements of Tractors and High Compression stationary engines.

NATIONAL—Big Power—Spark Plugs are made in all sizes—to fit any motor—for every requirement of air, land and water service. Every one is carefully inspected and rigidly tested. Prices: Standard sizes for automobiles, etc., $1—Tractor Special for tractors and high compression stationary engines, $2.

*SOLD BY RELIABLE DEALERS—BOOKLET MAILED ON REQUEST*

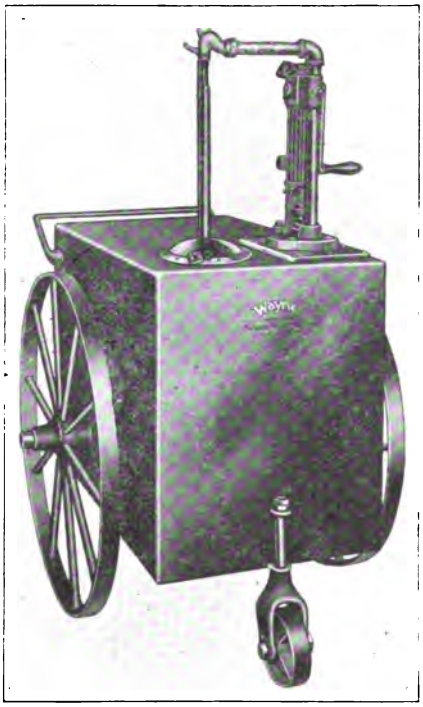
### McKinnon Radiator

McKinnon radiators for passenger cars, trucks and tractors are being placed on the market by the McKinnon Dash Co., Buffalo, N. Y. These radiators are of the true cellular type and are manufactured by a special process. The metal is wrapped around the forming mandrels by automatic machines instead of being drawn or stretched, which make it possible to

use metal .0025 of an inch in thickness without danger of tearing or stretching, it is claimed. Corrosion of the radiator due to the action of alkali or aciduated water is prevented by careful tinning both inside and out.

### Wayne Portable Wheel Oil Tank

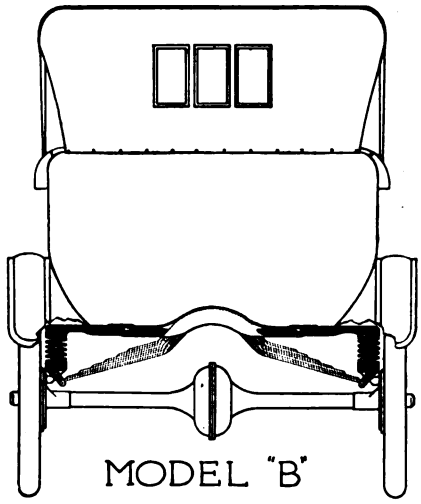
The Wayne portable wheel oil tank is designed for filling cars in the garage and at the curb. It can readily be moved from place to place, doing away with the carrying of oil measures. It has a capacity of 65 gal-



lons and is equipped with a quart pump. The tank is built of heavy gauge steel, welded throughout, forming a solid container. The pump measures half-pints, pints or quarts, by simply turning the quantity stop to its proper position. A padlock is provided so that oil cannot be drawn by unauthorized persons.

### Plunkett Shock Absorber

Plunkett shock absorbers for both the front and rear springs of the Ford car are being placed on the market by the Plunkett Shock Absorber Co., 323-327 Wash-



ington Street, Brooklyn, N. Y. These shock absorbers are designed to act as a rebound snubbers as well as absorbers of shocks which compress the springs. They also are built to check side sway when one wheel goes into a rut or other depression. They are easily and quickly attached.

### Ballman-Whitten Water Still

A simple air-cooled still designed to produce chemically pure water, economically with the least bother or attention is offered by the Ballman-Whitten Mfg. Co., 4060 Forest Park Blvd., St. Louis, Mo. Being air-cooled it requires no supply of cooling water and as it is self contained it may be used on a gas, oil or coal stove.

The still is constructed of two parts, the boiler and the condenser. Both parts are made of sheet copper coated with pure tin on all the parts which come in contact with the distilled water. The boiler has a capacity for two gallons of water and may be easily filled while the still is in operation. Scale, mud and impurities which are deposited in the boiler may be quickly cleaned out. The condenser which fits tightly over the boiler is arranged to collect all the distilled water and conduct it to an outside container, kettle or bottle.

The condenser has no delicate or small parts and is easily removed for inspection or cleaning. It is arranged to allow sufficient sterilized air to mingle with the steam so as to make distilled water which is not only chemically pure but aerated.

As this still is designed for continous operation it may be run over night and will produce about 1½ gallons of distilled water in 12 hours at a cost of about 2 cents per gallon with gas costing $1.00 per thousand feet.

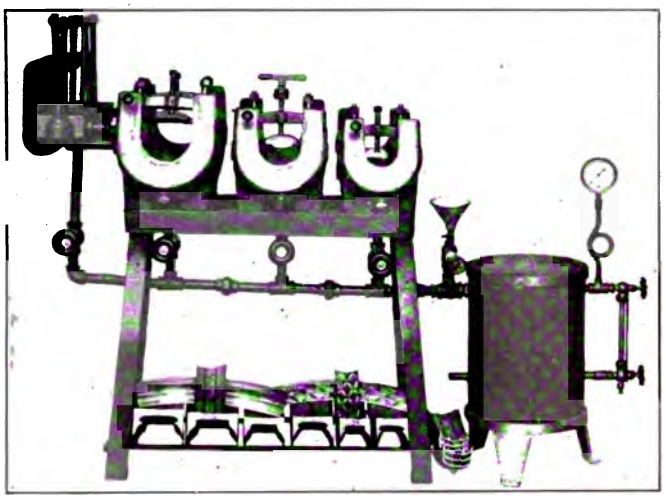
### Western Vulcanizer

The Western Vulcanizer is designed for every class of repair work from tube puncture to putting a diamond tread on a 5½-inch cord tire. Many manufacturers have increased the cross-section of their tires, this increase amounting to ½ inch in most cord tires. In designing the molds furnished with this vulcanizer, the Western Tire & Rubber Works, Chicago, Ill., manufacturers of the outfit, has fully provided for this, so



that all makes and sizes of tires can be handled.

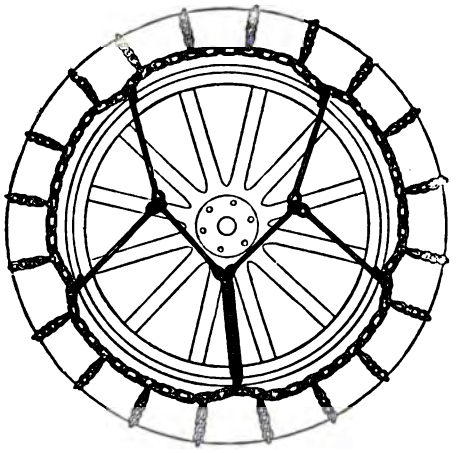
Iron or steel bead plates must first be heated in the mould to ensure a complete cure of the tire beads. By the use of composition bead plates which it is stated take the curing heat the instant they come in contact with the side of the mould cavity, the company has overcome this difficulty.

The vulcanizers are furnished complete with moulds for handling both non-skid and plain tread tires of either the straight side or clincher type.

---

### Merchant's Skid-Chain Tightner

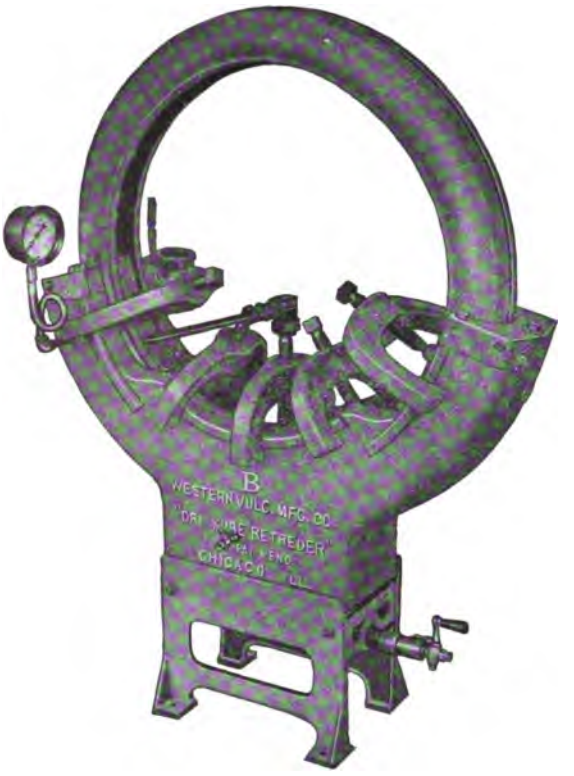
The Merchant's skid chain tightener, offered by the M. H. Merchant's Corp., 236 Emma street, Syracuse, N. Y., is a spring device for keeping the skid chains tight and allowing them to creep around the wheel at



the same time. The arrangement of steel rods equalizes the work of one spring and gives an equal tension at all points of contact with the chain, and at the same time takes up the slack in the chain as it wears or as the cross chains break, it is stated.

### "Dri-Kure Retreder"

"The Dri-Kure Retreder" is a new type of machine for retreading tires, manufactured by the Western Vulcanizer Mfg. Co., 150 Desplaines street, Chicago, Ill.



The use of non-heat-conducting end blocks prevents the stock from flowing at the ends of the cure, and assures a smooth cure at the laps, it is stated.

The tire is built up ready to cure; a sand bag is placed in the tire and then the tire is placed in the mold. A heavy steel band is placed upon the sand bag and the pressure clamps applied to it. The clamps are screwed down to the desired pressure, and the cure is on.

In addition to curing plain treads the machine will cure non-skid casings. This is accomplished by the use of a shell insert or matrix with the rib feature, which can be fitted to the mold. It is claimed a tire retreaded in this machine will give as much mileage as a new tire.

---

### Jefferson Transformer Tail Lights for Fords

The Jefferson transformer tail light for Ford cars has been perfected and placed on the market by the Jefferson Electric Mfg. Co., 426-430 South Green Street,

Chicago, Ill. The outfit consists of a complete standard electric tail light with four candlepower bulb, a compact sturdily constructed transformer, and enough rubber covered wire to complete the simple installation.

The light is operated by the surplus electric current from the Ford generator which passes through the transformer so that uniform brightness is ensured regardless of the speed of the engine.

Digitized by Google

When the motor is stopped a switch on the face of the transformer is thrown to the battery side and the tail light is kept burning brightly by two dry cells. The batteries will last all season with the low amperage lamp that is used, it is claimed. The installation can readily be completed in fifteen minutes, it is said.

### Xander Storage Battery Tools

In the accompanying illustrations are shown two tools that are designed for use in connection with the in stallation of storage batteries. The first one is a terminal cleaner or scraper. This tool has a blade of tempered steel, a body of bronze metal, and a handle of Bessemer steel wire, all nickel plated. It is stated the blade will accommodate itself to any taper of terminal. It is used by entering the blade end into the battery terminal, and giving it severel turns.

The tool is made so that it removes foreign matter but does not enlarge the hole in the terminal.

The lower cut shows another convenient tool, really a mate to the above. This is a taper pin cleaner, used for cleaning the taper pin plugs on end of cables where they enter into the terminals of the battery. This tool also works on the same principal as the one above, being self adjusting to any taper, and also has tempered steel blade, and body of bronze metal, nickel plated. These tools are being manufactured by J. G. Xander, 824 Court street, Reading, Pa.

**USL Electric Arc Welder**

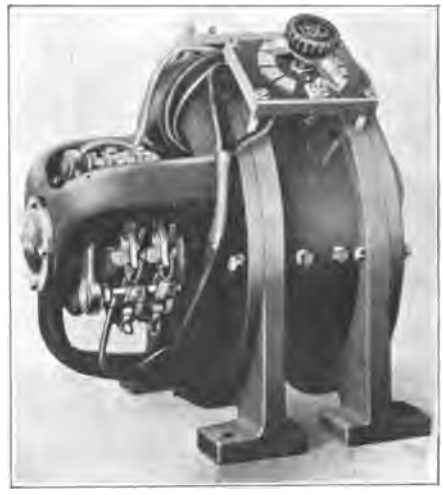
After an exhaustive investigation into the requirements of garages, machinery repair shops, and manufacturing institutions, the U. S. Light & Heat Corp., Niagara Falls, N. Y., has developed a line of Electric Arc Welding Machinery to meet the requirements for every character of work.

For the smaller shops where it is possible to bring the parts to be welded to within fifty or seventy-five feet of the welding aparatus, a stationary type is provided. Where it is necessary to take the electric welding appartus to the work, a portable type is provided.

The USL arc welder has a rated capacity of 4 kw. and gives 200 amperes direct current or less. It is of the variable voltage type with a range of open circuit voltage from 35 to 65 volts. Tests of the welder show that it delivers practically constant energy throughout the range of voltage used in welding, it is stated. This characteristic, together with other special features of design, keeps the arc strong and steady and aids the operator in securing a steady flow of metal into the weld.

The USL Arc Welder is made in the form of a converter for use on 100 to 125 volt direct current circuits only, and in the form of a motor-generator for all other circuits. The converter is inherently regulated, weighs 665 pounds and delivers current at the arc through the arc stabilizing reactor with an efficiency of 65 to 70 per cent, it is claimed.

The motor-generator type of welder consists of 7½ hp. motor mounted on the same shaft with a special 4 kw. generator. This generator is inherently regulated, compound wound, self excited, and has a dropping voltage characteristic which keeps the current within safe limits on short circuit. Motor-generator equipments are available in any standard D. C. voltage and in any generally standard A. C. voltage, phase and frequency.



Converter and motor-generator types are both made up for portable and stationary use. The portable truck with cover is 28 in. wide, 55 in. high and 54 in. long. Completely equipped with motor-generator, switch and meter panel, cover, cable reel, and flexible cable, it weighs 1530 pounds.

### National Stone Insulator Plug

A new heavy stone insulator spark plug has been perfected by the National Spark Plug Co., formerly the Bergie National Spark Plug Co., Rockford, Ill., for use in tractors and high compression stationary engines, which is a radical departure from the ordinary type of porcelain insulator spark plug.

It is claimed that this new stone insulator is practically unbreakable, heatproof, oilproof and compression-tight.

The insulator is made of an entirely new basic material by an exclusive process, which is the result of a long series of experiments that have been made by the company's chemists.

### "Dol-Em-Up"

After a tire has been retreaded the side walls look dirty in comparison with the new tread. To give the side walls of the tire a clean, smooth finish, the Western Vulcanizer Co., 150 Desplaines Street, Chicago, Ill., has brought out "Dol-Em-Up," which is a paste put up in quart cans. The paste is diluted with gasoline to the thickness of ordinary paint and applied with a brush. It dries quickly and will not rub off. Four colors are offered: red, gray, black and white.

### Universal Pump Rubbers

The No. 57 Universal Pump Rubber, designed to fit all styles of pump connections, is now being placed on the market by the Continental Rubber Works, Erie, Pa. The rubbers are packed 100 in a box, ready for use.

### Hiatt Manifold for Ford Cars

The Hiatt Manifold offered by the Hiatt Manifold Co., Box 971, Indianapolis, Ind., which takes the place of the regular manifold of a Ford, differs from the latter in that it has a hollow pipe on the inside of the body. This hollow pipe takes through it air from the outside, which combines with a water vapor coming from the radiator through a small copper pipe. This mixture passing through the pipe is superheated, due to the exhaust gases passing around the internal pipe, and upon collecting in the dome this superheated vapor-laden air becomes gas, which, after passing to the intake manifold and becoming mixed with the gas from the carburetor is ready to ignite. The control of this gas is effected through the regular spark and throttle levers on the steering post of the car. It is claimed that with this manifold the engine runs smoother and cooler and that all traces of carbon are eliminated.

## Tractor Spark Plugs

*(Continued from page 12)*

pitting or burning. This is entirely due to the use of defective material and there should be very little of it. If it does occur seriously, it should be reported to the plug manufacturer.

Always bear in mind that the tractor engineers have run thorough tests before deciding which plug to use. The spark plug they finally decide upon is the one they believe to be the best suited for their engine. When a new plug is needed, the tractor user should insist upon the same plug his engine was originally equipped with at the factory.

In general, the spark plug manufacturer is prepared to cope with the tractor plug problem and can furnish plugs to meet all present requirements. However, present-day development in engines and fuels is so rapid that the material on the market is not always the latest obtainable. The dealers are learning to classify plugs for the various conditions of service and if the tractor owner will specify clearly just what the plug is to be used on, he should have no trouble getting just the plug he needs.

### Reduce War Vehicle Orders

The contracts for motor vehicles placed by the War Department during the war and amounting in all to $416,528,000 on November 11, 1918, were reduced by cancellation to $17,970,000 on May 17. Of the total 67 per cent was cancelled, 29 per cent filled, and 4 per cent still remains on order.

### Doble-Detroit Reorganized

The Doble-Detroit Steam Car Co., Detroit, is being reorganized. Details of the reorganization will be announced shortly. The company recently sold its manufacturing plant, but expects to build another. It is expected that the car will be placed on the market this fall. In the meantime the company will continue the manufacture of the Doble-Detroit heating system.

### Fordson Reduced $135

Henry Ford & Son, Detroit, is wiring all distributors of a reduction of $135 in the price of the Fordson tractor. The new price, effective at once, is $750. The old price was $885. The price to the distributor is $600 and he turns it over to the dealer at $635.

The Fordson tractor plant is now getting back into heavy production. Approximately 100 machines are being completed daily. A carrier system similar to the one in the Ford Motor Co. plant at Highland Park is being installed.

### Pontiac Spring Rebuilding

The Pontiac Spring Works, Pontiac, a unit of the Standard Parts Co., Cleveland, which was destroyed by fire last March, will be rebuilt. The building will be brick and steel construction, 186 by 100 ft. A 2-story office building, 63 by 87 ft. will also be built. The new plant will cost approximately $100,000. The new unit will house the forge department. The company is employing 300 men and expects to increase to 800.

### Republic Surplus $900,770

The Republic Motor Truck Co., Inc., reported to the New York Stock Exchange a surplus of $900,770, after the payment of interest and other charges and war taxes, in a statement summarizing its affairs for nine months ending March 31 last. Net sales aggregated $12,039,474, and costs reached $10,545,582, leaving net profits of $1,493,892. The profit and loss surplus was given as $5,765,848, all figures including the Republic Motor Truck Co. of California.

### Nemours Trading Corp.

The Nemours Trading Corp., New York, has been formed with a capital of $12,000,000 to take over the Allied Industries Corp., French-American Constructive Corp. and the Merchant & Manufactures' Exchange, the last of which owns the Grand Central Palace, which is to be used as headquarters for the new corporation as soon as it is released by the Government. Associated with this corporation will be Bonright & Co., bankers.

### New Bethlehem Vice-President

H. B. Hall has been elected vice-president of the Bethlehem Motors Corp., Allentown, Pa. He will make his office in New York and look after the export activities of the company. He was formerly assistant general sales manager of the Bethlehem Motors Corp. and until recently president of the Chicago-Bethlehem Sales Co., Chicago.

### Motor Vehicles Returned

The American Expeditionary Forces have been instructed to return all class B 3-ton standardized army trucks to the United States, together with all new truck dump bodies and all Dodges and Cadillacs that are boxed or crated.

The final disposition of these has not yet been determined, but it is anticipated that they will form a part of the permanent equipment of the United States Army. A total of 18,826 class B trucks, 2,952 Dodges and 1,399 Cadillacs were shipped to France up to the signing of the armistice. Many of these have been destroyed in battle or through wear and tear.

### Goodyear Panama Offices

The Goodyear Tire & Rubber Co., Akron, has opened central headquarters, with distributing warehouses, at Colon, Panama. J. H. Proeger, who has been branch manager at Havana, Cuba, for several years, is in charge.

The Panama office will serve Costa Rica, Nicaragua, Bolivia, Venezuela, Dutch Giana, Guatemala, Panama, Chile, Peru, British Guiana, Honduras, Salvador, Colombia, Ecuador, French Guiana and the islands of the West Indies excepting Cuba, Porto Rico and the Dominican Republic.

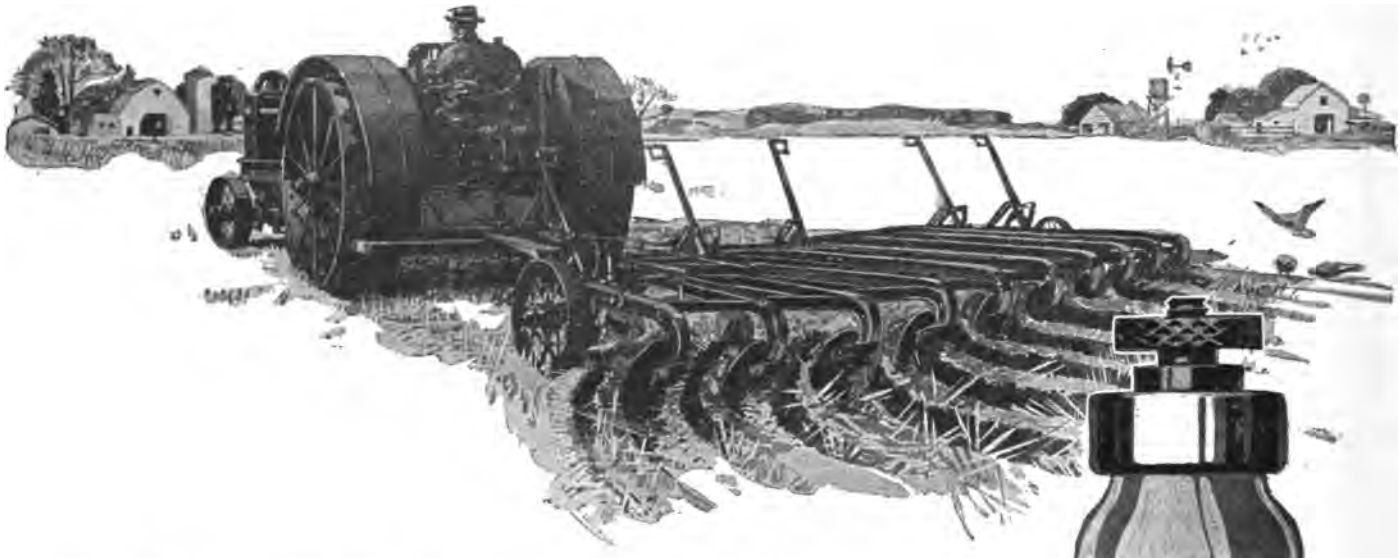
## Dependable Spark Plugs



## Play Important Part in Tractor Industry

FOR hours and hours at a stretch, the tractor engine is taxed to its utmost, imposing a sustained, maximum demand upon the spark plugs. In other types of engines, such as passenger cars, top speed and extreme demands are required only occasionally. With a tractor it is one long continuous grind at heaviest load—motor pulling at maximum horse-power—spark plugs at sizzling heat—and no let up in the pounding, vibrating jars.

To withstand such brutal punishment and not "miss" even temporarily, spark plugs must be of more than common hardiness and efficiency.

Our famous No. 3450 Insulator, with its greater resistance to shocks and temperature changes, together with our patented gasket construction, fortify Champion Spark Plugs for the terrific battle they must constantly wage in tractor engines.

The established dependability of Champion Spark Plugs make them more profitable for dealers to handle our complete line. Go over your stock and order today.

CHAMPION HEAVY STONE
For Tractors, Trucks and High-Powered Cars
B-43, ⅞-18 Price $1.25

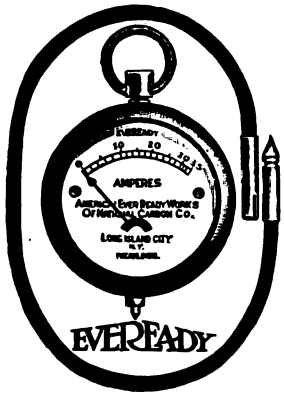
# "Stuck Again!"

They had planned a big day—took lunch along. They got half-way there and the engine quit. All because the dry batteries gave out. The whole day's pleasure gone.

If the dealer who sold him the batteries had also sold an EVEREADY Pocket Meter the owner could have tested his batteries before starting and avoided the trouble.

Every motor boat owner is willing to spend a dollar to insure a good time every time. And you'll get his good will and permanent patronage if you will sell him the EVEREADY Pocket Meter.

Get prices and additional dealer facts today from your EVEREADY distributor, or write us. Auto type meters too—for storage batteries.



No. 1002 Ammeter

## AMERICAN EVER READY WORKS

*of National Carbon Company, Inc.*

**300 Thompson Avenue** **Long Island City, N. Y.**

*Also Makers of*

Eveready Mazda Auto Lamps
Eveready Storage Batteries
Eveready Dry Cells
Eveready Tungsten Batteries

# VESTA STORAGE BATTERY

*"Costs less per Month of Service"*

## *Vesta Service to Users Builds Vesta "Good Will"*

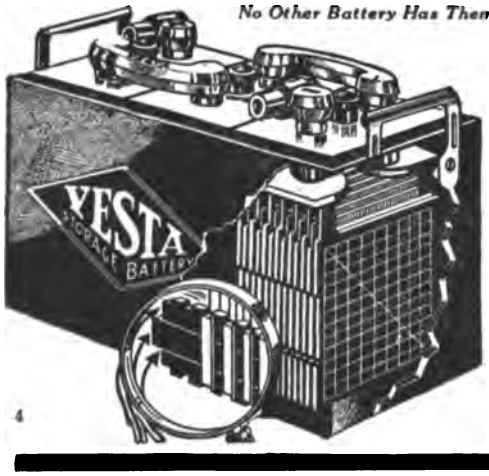
The excellent facilities for giving prompt and intelligent attention to users at the typical Vesta Service Station is one reason why the motoring public has such a high regard for Vesta Batteries.

Vesta users have said and are saying many kind things about this service to their friends. This is what we call Vesta "good will."

It is this Vesta "good will" which makes Vesta dealerships so profitable over a long period of time. For it is generally recognized that a satisfied user is the dealer's best advertisement.

**There is still room in the Vesta organization for a few more dealers who are prepared to measure up to the high standards of Vesta service and of Vesta batteries themselves.**

*No Other Battery Has Them*



**Vesta Accumulator Co.**

**2100 Indiana Ave.**
**Chicago, Ill.**

### Reasons For Vesta Satisfaction

1. ***Vesta Indestructible Isolators***—an ingenious device locking the plates apart and preventing short circuits.
2. ***Vesta Impregnated Wooden Mats***—preventing "treeing" and its disastrous consequences.
3. ***Titanium***—a rare mineral entering into the lead plates, hardening them and giving them longer life in use. It precipitates minerals and impurities in solution, thus increasing the efficiency of the battery.
4. ***The Vesta Poro-Hard Plate***—a plate which is hard and extra durable, but because of its exceptional porosity gives unusual capacity.

# COMING—

## The "CORD TIRE" Among Storage Batteries!

On or about September 1st, we will announce a new storage battery.

We are certain of its supreme merit. Our engineers have been experimenting with it in countless forms and sizes for the past five years. In grueling laboratory tests it has outlasted and out-performed any other battery we could buy or build. Thousands have been used in actual war service in the U. S. Navy.

The new battery stands in the same superior relation to any other battery as the cord tire to the fabric tire.

And just as surely as the coming of the cord tire upset and gave new impetus and new standards to the tire market, so this new battery will open up new possibilities in the storage battery business.

PHILADELPHIA DIAMOND GRID BATTERY

It will be advertised—far more intensively and extensively than we have ever advertised before.

It will set a new high water mark of perfection that will make it easy to sell—even easier than the present Philadelphia Diamond Grid Battery.

In the past, Philadelphia Diamond Grid Service Stations have been remarkably successful because they had a good battery that was easy to sell. Now their position will be even stronger. They will be able to offer the only "cord tire" among storage batteries.

Can *you* afford to sell nothing but "fabrics?" Write for our proposition today.

*Watch for the announcement of the new battery on the covers of Saturday Evening Post, Collier's, and the Literary Digest.*

...bra Screw Base. † Miniature Base. * When sizes are not standard stock sizes, under Internal Brake use the next smaller size; under External Brake use the next larger size. Odd sizes are some...s made for manufacturers on account of quantity buying.

Digitized by Google

# Customer wanted to know whether we could fit up this type UR Universal Rheostat with knife switch, fuses and ammeter here is what we did for him

# The UNIVERSAL Rheostat

## The UNIVERSAL Rheostat

has simplified battery charging. One simple rheostat will control the charge of any number of cells from 1 to 44 lead type or 1 to 60 Edison type. Any charging rate from 20 amperes maximum to 2 amperes minimum.

Used by battery manufacturers and the U. S. Government. Ask for complete details and quotations.

—now what can we do for YOU?

# An Ideal Battery Charger for Alternating Current

The 6-amp., 75 volt Tungar Rectifier will charge any combination of 3, 4, 5, 6 up to 30 cells at 6 or 7 amperes or less from alternating current.

It is a practical device demonstrated by actual service. It equips the garage for efficient battery charging at a much lower cost than any other reliable device of similar capacity. The Tungar Rectifier allows a good profit on battery charging.

The Tungar fastens to the wall thus taking up no floor space. It uses alternating current at a cost of but six cents an hour for ten 3-cell batteries. It is self-starting, requiring no attendant.

Fool proof, trouble proof and simple to operate, the Tungar Rectifier charges all sizes of storage batteries up to thirty cells.

# This Spectacular "Spike" Test Proves the Remarkable Strength of the Mac-Lar Battery

The spectacular "spike" test is quickly spreading the story of the Mac-Lar Master Battery among dealers and motorists over the entire continent. Just bring up a picture in your mind of the electrical energy which will literally melt two husky 20-penny spikes (see illustration), and you have an idea of the discharge capacity of the Mac-Lar Battery—the big strong force which is *there* waiting for you, whenever it is needed.

## Easy to Sell Mac-Lar Batteries With this Indisputable Evidence

Dealers report that they have yet to find a motorist who does not immediately see the significance of this simple but remarkable demonstration, and you can make it in a minute or two at any time.

Just take two ordinary 20-penny spikes and two pairs of pliers.

With the pliers hold one spike to one terminal of the Mac-Lar Battery and the second spike to the other terminal.

*Now bring the ends of the spikes together.*

Immediately there appears a red glow, and in a few seconds the ends of the spikes are a molten mass, a striking and convincing proof of the remarkable power of the Mac-Lar Battery.

## *The 18 Months' Guaranty in Writing Assures Long Life*

**This absolute guaranty assures you that the big strong force of the Mac-Lar Master Battery will last—that your customers will get complete satisfaction.**

It all gets back to the special process which enables us to build into the Mac-Lar three advantages never before combined in the same battery. (1) Extremely hard plates which guarantee long life, (2) 25% extra capacity for the same plate area and a higher momentary discharge rate than any soft plate battery, and (3) unusual recharging efficiency.

## Four Standard Models Fit 99% of Cars— Low Price Means a Beaten Path to Your Door

**For replacement the Mac-Lar is made in four standard models—(two shapes in the 6-volt and two in the 12-volt—and *these four models fit* 99% of all cars—replacing more than fifty-one combinations and shapes of other batteries. Special universal terminals are furnished making it easy for anyone to install the Mac-Lar on any car The low price of only $25 on the 6-volt and $36 on the 12-volt, together with the indisputable "Spike" Test, opens up profit possibilities you never have had before—the Mac-Lar agency carries with it the *big volume* business of your territory.**

**Write or wire for complete dealer proposition immediately—it will come in a definite, tangible form which indicates clearly the large money-making possibilities for you.**

## Trade Gossip

*(Continued from page 39)*

L. E. Lyons, who far the past several months has been acting as sales manager of the B. F. Everitt Co., has resigned to return to the Sheldon Axle & Spring Co., with headquarters in Detroit.

William F. Jahnke, formerly a member of the city commission of Saginaw, is now connected with the General Motors Corp. in Detroit, being one of six men working out plans for the organization of a savings and investment department of the General Motors Corp.

F. A. Petrie, director of sales of the Dort Motor Car Co., for the South American countries, has sailed for Buenos Aires to establish export connections for the Dort car in Latin America.

Lynn McNaughton has been appointed general sales manager of the Cadillac Motor Car Co., succeeding Earle C. Howard, who recently resigned. Mr. McNaughton has been with the Cadillac sales organization for fourteen years, and assistant under Mr. Howard since 1913.

B. V. Unwin, until recently connected with the Commonwealth Brass Co., Detroit, has been appointed manager of the sales promotion department of the J. C. Wilson Co., Detroit.

F. W. McIntyre has been appointed sales manager of the Becker Milling Machine Co., Boston. For the past sixteen years he was connected with the Niles-Bement-Pond Co., Boston.

O. D. Conover, formerly vice-president and chief engineer of the T. W. Price Engineering Co., New York, and production manager of the Ludlum Electric Furnace Corp., has resigned to become sales and production engineer on foundries and steel plants of the Austin Co.

C. T. Barbour, procurement manager of the Bearings Service Co., Detroit, is making a tour of the factories of the New Departure Mfg. Co. The Hyatt Roller Bearing Co. and the Timken Roller Bearing Company, studying the methods of stock handling, and shipping used in these companies. Mr. Barbour will also visit branch offices of the Bearings Service Co., at Boston, New York, Philadelphia, Pittsburgh and Cleveland while enroute.

A. S. Hetzell, who has won considerable recognition as a tire sales executive in the past two years, as manager of the Cleveland branch of the Republic Rubber Corp., has been promoted to district manager of the Philadelphia branch.

P. C. Gunion is now assistant manager of the new Industrial Division of the General Motors Corp.

Peter T. Hill has joined the sales department of the Torbensen Axle Co.

Guy Wright, formerly assistant sales manager of the Buda Motor Co., Harvey, Ill., has been made sales manager, succeeding Lon Smith, who resigned to become sales manager of the Midwest Engineering Co., Indianapolis, Ind.

### Canadian Bowser Co. Reorganizes

The S. F. Bowser Company, Limited, Toronto, Ont., has re-organized, to operate as a strictly Canadian organization, financed and managed under Canadian control.

S. F. Bowser Company, Limited, has for a number of years been manufacturing and selling Bowser gasoline and oil pumps, tanks and storage systems under the control of the parent company at Fort Wayne, Indiana, U. S. A. The company's Canadian business has grown steadily from year to year, practically its entire Canadian trade being supplied from the Toronto factory.

H. C. Christie who has been for a number of years connected with the Canadian factory of the company recently as sales manger, has been elected manager with E. F. Cummings as factory manager. The other officers are: S. F. Bowser, president; S. B. Bechtel, vice-president; H. J. Grosvenor, secretary; and W. G. Zahrt, treasurer.

### Load and Inflation Schedule

The following load and inflation schedule has been gotten up and is recommended by the B. F. Goodrich Co., Akron, Ohio:

CORD TIRES

| | | | |
|---|---|---|---|
| 3 " | 45 lbs. | 375 lbs. | load |
| 3½" | 50 " | 570 " | " |
| 4 " | 60 " | 815 " | " |
| 4½" | 70 " | 1,100 " | " |
| 5 " | 75 " | 1,300 " | " |
| 5½" | 80 " | 1,700 " | " |

FABRIC TIRES

| | | | |
|---|---|---|---|
| 3 " | 45 lbs. | 375 lbs. | load |
| 3½" | 55 " | 570 " | " |
| 4 " | 65 " | 815 " | " |
| 4½" | 75 " | 1,100 " | " |
| 5 " | 80 " | 1,300 " | " |
| 5½" | 85 " | 1,700 " | " |

## More Mileage Adjustment on Goodrich Tires

## FABRICS, 6,000 Miles--CORDS, 8,000 Miles

**TO automobile owners and drivers—to Goodrich Dealers—the B. F. Goodrich Rubber Company herewith declares a *more-mileage adjustment* on Goodrich Tires—6,000 miles for SAFETY TREADS, and 8,000 miles for SILVERTOWN CORDS.**

Fix these new Goodrich Adjustment figures firmly in your mind — 6,000 miles for SAFETY TREADS — 8,000 miles for SILVERTOWNS — *instead of the 3,500 and 5,000 miles respectively heretofore in force.*

This new adjustment stands back of all Goodrich Tires, including tires already purchased in the hands of user or dealer.

Goodrich Tires in actual usage on road and pavement are today unfolding such matchless mileage, regularly in excess of adjustment basis, that Goodrich knows it has the strongest, most durable tires the rubber industry has produced.

The Goodrich adjustment mileage is increased because Goodrich knows the mileage in its tires, and it wants to give every motorist a share in their economy, and all-around benefits.

Go to a Goodrich Dealer, and buy a Goodrich Tire — or buy four Goodrich Tires — sure that with fair and square usage a Safety Tread will render you at least 6,000 miles; and a Silvertown Cord at least 8,000.

***Buy Goodrich Tires from a Dealer***

# List-Prices of all Makes of Tires and Tubes

## REVISED MONTHLY

**EXPLANATION:—Under each size we have placed the list price of not only Casings, but also Tubes. The letters to the left of the line show the Type of Tread and Color of Tubes. P means Plain Tread; N. S. Non-Skid; G. T. Gray Tubes; B. T., Brown Tubes; R. T., Red Tubes; When price is given without letter or sign it means that the tire is manufactured in Clincher, Quick Detachable Clincher, and Straight Side or Dunlop types. When a C appears with the price it means that the tire is made in Clincher type only; when Q, in Quick Detachable only; when D, in Dunlop or Straight Side only; when †, in both Clincher and Quick Detachable; when *, in both Quick Detachable and Dunlop or Straight Side; when §, in both Clincher and Dunlop or Straight Side.**

This compilation is for the benefit of the trade. We have used every care to give the latest authentic information, but we do not guarantee the absolute correctness of these prices and cannot be held liable for same. The Ferguson Publishing Co.

# BRUNSWICK TIRES

## Measure More Carefree Miles

Brunswick tire-economy implies more than extra mileage. It means less tire-trouble as well. This is economy of time, of labor and of upkeep cost.

By combining every proved tire feature and reinforcement, Brunswick Tires have been developed to a point of maximum defense. Choicest raw materials combined with years of experience in the curing of rubber make possible the remarkable resiliency and toughness and strength of the Brunswick tread.

Finally — the scientific construction of this great tire — evolved by a corps of tire-experts who know the advantages and weaknesses of all tires. They realized that success lay in building a tire better than any that had gone before. The Brunswick has fulfilled the critical requirements of this technical staff.

Test a Brunswick against any other tire on the market. Compare it for endurance and steady, safe performance. It will convince you that it sets a new standard for efficient tire-building.

*"There's a Brunswick Tire for Every Car"*

**THE BRUNSWICK-BALKE-COLLENDER CO.**

General Offices: 623-633 S. Wabash Ave., Chicago

*Branches in the Principal Cities of the United States and Canada*

# RACINE TIRES

RACINE RUBBER COMPANY · EXTRA TESTED · TIRES ·

THESE tires—the Extra Tested products of Racine Rubber Company, Racine, Wis.—offer the tire dealer unmatched opportunity for building better business.

Observe the Racine dealers you know. They have the quality trade. They are making money.

RACINE "COUNTRY ROAD" TIRES and RACINE "MULTI-MILE CORD" TIRES are true quality, in every sense of the word. They are carefully Extra Tested in Racine Rubber Company factories. They *receive extra care.* They *give extra wear.*

RACINE "COUNTRY ROADS" are fabric tires, designed to serve best on all roads.

RACINE "MULTI-MILE CORDS" are the peak of cord tire quality. They are featured by the Racine Absorbing Shock Strip, an extra strip of blended rubber which scientifically absorbs the jars and jolts of the road. It means more mileage, easier riding—all round greater cord tire value.

Racine Tires hold big opportunity for you. You can obtain all the money-making facts by writing either to Racine Rubber Company, or to your nearest Racine distributor.

RACINE RUBBER COMPANY

# To Win Success In The Tire Business

**SUCCESS of the real, permanent kind, comes to the tire dealer who sells recognized quality tires, and whose business is on a firm, sound basis.**

**Ajax Franchised Dealers are winning success—from coast to coast and from Canada to Mexico. They are getting the generous slice of the tire business in their localities. They sell tires of proved quality, and through the liberal terms of the Ajax Dealer's Franchise, their business is built on a good, strong foundation.**

**The Ajax Dealer's Franchise is an asset—a big one. There are opportunities open for dealers in certain localities. For complete details write**

**AJAX RUBBER COMPANY, INC., NEW YORK**

**Factories: Trenton, N. J. Branches in Leading Cities**

# FEDERAL

## DOUBLE CABLE BASE CORD TIRES

## A Big Selling Advantage

THE firm grip the Double-Cable-Base gives Federal tires to their rims, also gives Federal dealers a "firm grip" upon the tire sales of their territory.

Additional wear and long life are afforded by four twisted steel cables running through the base of the tires. They hold the tire securely on the rim, prevent tube pinching, rim cutting and blow-outs above rim, and relieve side-wall chafing.

Unusual resiliency and durability are also added by our method of internal air pressure moulding of separate diagonal layers of loose cords, impregnated with live rubber. This gives even tension that distributes road strain uniformly.

Besides the black non-skid Federal Cord Tire there are the white non-skid "Rugged" tread extra ply fabric and the black "Traffik" tread.

Write for dealer information.

**The Federal Rubber Co., of Illinois**

**Factories, Cudahy, Wisconsin**

Manufacturers of Federal Cord and Fabric Automobile Tires, Motor Cycle Tires, Bicycle Tires, Inner Tubes Accessories and Mechanical Rubber Goods

# BILTWELL TIRES

## "MASTER OF THE ROAD"

### LONG SERVICE
of
### BILTWELL TIRES
**Lies in**

— the rich quality of materials used.

— the expert workmanship incorporated in their manufacture.

— the fact that they are extra well reinforced where stresses are applied.

— and the fact that the last word in rubber-making machinery is used in their construction.

*Some attractive territory is still available for the man who wants the best.*

**THE BILTWELL TIRE & RUBBER CO.**

**MADE AT AKRON**

# DREADNAUGHT TIRES

DREADNAUGHT TIRES are the product of a company with the highest ideals of service and efficiency. Throughout the land the DREADNAUGHT TIRE is daily rendering ***uninterrupted*** mileage, far in excess of its guarantee, ridding the motorist of road troubles, changes and adjustments.

Made in two massive grey Treads—the DREADNAUGHT REINFORCED VACUUM is anti-skid; the DREADNAUGHT RIBBED supplants the plain tread.

## THE DREADNAUGHT TIRE & RUBBER CO

BALTIMORE, MARYLAND

**DEALERS:** We have an exceptional proposition to those who want to join in selling DREADNAUGHT TIRES.

*Write or Wire*

**CHARLES F. U. KELLY, INC., SALES DEPARTMENT: 1834 BROADWAY, NEW YORK**

## GUARANTEED 6000 MILES

# The Tube That Lasts

THE air-holding life of a McGraw Inner Tube is literally *wound* into it, as strength is built up of many strands in a rope.

The rubber, in a thin sheet, is wound about a pole, forming a tube wall of several thicknesses. These are then fused into a flawless unit, proof against seepage. The McGraw valve base is double-strengthened with alternating strips of rubber and cotton, inserted between the layers of the tube structure. The point of greatest strain is thus most heavily reinforced.

*Red* or *Grey*, the McGraw tube backs up all the mileage any casing has in it.

*McGraw Tires and Tubes offer progressive dealers an exceptional opportunity to build profitable, permanent business. Write for details.*

THE McGRAW TIRE & RUBBER CO., *Cleveland*

Factories: EAST PALESTINE, OHIO

That We May Ride In Comfort

*Makers of Fabric and Cord Pneumatics, Standard and HiTread Truck Tires, Inner Tubes*

# KEYSTONE TIRES

## Guaranteed

# 6000 MILES

THE same wonderful Tires as ever---but we raised the mileage because Keystone Tires always have and always will stand up for 6000 miles. We now guarantee them without reservation for that distance.

NO TIRE IN THE WORLD APPROACHES KEYSTONE FROM AN ECONOMICAL MILEAGE COST STANDPOINT

*DEALERS:—If you would enjoy a big, prosperous record-breaking season stock up with these great business-builders and profit-producers without delay.*

## KEYSTONE TIRE & RUBBER CO.

Broadway and 62d Street New York

# BEARING DATA SECTION

section we have published the type number of both Ball and Roller Bearings used in about 3,000 models of Passenger Cars and Trucks from 1909 to 1919. Where ngs are used only the number of the bearing is given. Where Roller Bearings are used both the name of the bearing and the number are given.

## EQUIVALENT TABLE OF ANNULAR BEARINGS

ılar Ball Bearings are interchangeable. Below is a table showing the type number of each manufacturer equivalent to numbers we have used, which appear in the mn.

# Ball Bearings for Every Motor Car Ever Manufactured

Through the information collected in the past ten years of specialization in the field of replacing bearings for Motor Cars, we have built up an organization and stock of bearings that includes every type, every size and kind for every car ever manufactured.

## AHLBERG REGROUND BEARINGS

Ahlberg Reground Bearings save on operation costs, yet they give the same service as new bearings.

An Ahlberg Reground bearing is a bearing that has been tested under actual service conditions. Actual service has proved the metal in the rings to be good. Our methods of regrinding and care give you the assurance of a long-lived quality bearing.

Investigate our Exchange System. You will save and get the same service as you would on new bearings.

***Don't forget that we have new bearings of all sizes and types. We have everything in bearings for Motor Cars.***

ring.
**TIAL BEARING**
d.

I—Thrust.

**DRIVE BEARINGS**
J—Pinion or Worm Shaft Front.
K—Pinion or Worm Shaft Rear.
L—Worm Spindle Thrust Front.
M—Worm Spindle Thrust Rear.
N—Universal Joint Propeller Shaft.

**CLUTCH BEARINGS**
O—Clutch Shaft Pilot.
P—Clutch Shaft Rear.
Q—Clutch Yoke or Throwout.
R—Clutch Spider.
S—Transmiss. Eng. Clutch Shaft.

**MOTOR BEARINGS**
T—Camshaft Front.
U—Camshaft Rear.
V—Camshaft Center.
W—Crankshaft Front.
X—Crankshaft Center.
Y—Crankshaft Rear.

**TRANSMISSION BEARINGS**
AA—Main Shaft Front.
BB—Main Shaft Rear.
CC—Spline Shaft Pilot.
DD—Counter Shaft Front.
EE—Counter Shaft Rear.
FF—Reverse Idler Gear.

**FAN BEARINGS**
GG—Hub Bearing.
HH—Water Pump Shaft Bearing.
J J—Air Pump Shaft Bearing.

**STEERING POST**
KK—Thrust Upper.
LL—Thrust Lower.

**USE THIS TABLE**—Look in the key for the particular bearing you desire; note the letters in front of the bearing; find the car and model tely follows the name of the car you wish, follow it until you find the letters shown in the key—the number immediately following is the bearing that fits that particular spot. Ball bearings of all makes are interchangeable—we, therefore, give only the number. In some rill find as follows: 307 x 1⅝"; this means, 307 bearing with a special width, namely, 1⅝" wide instead of the usual width employed. ers B, C, N, D or T appear after the bearing, that letter must be used in ordering, as it is part of the manufacturer's designation number. Bearings, we give the name of the manufacturer, followed by the number, as (Hy. 16727) meaning, Hyatt bearing No. 16727. Timken supplied in parts, being composed of cone and cup. The numbers given show the cone first, as (5351-5320), 5351 being the cone and 5320 re Timken Bearings immediately follow name of car and model, and before any letter is used, it means that all bearings mentioned in Timken Rollers.

# FAFNIR

*Single Row Radial (Medium) 200 Series*

*Double Row Radial (Medium) 6800N Series*

*Double Row Radio Thrust (Medium) 8300 Series*

*Magneto or Open Type (Extra Light) 5100 Series*

## Fafnir Single Row Bearings Series 200, 300, 400.

Complete factory stock carried. These interchange with single row series of all standard makes.

## Fafnir Double Row Bearings Series 6200N, 6300N, 6400N.

Stocks carried of all most called for sizes. These bearings interchange with American width double row bearings.

## Fafnir Double Row Angular Contact Bearings 8200, 8300, 8400

These bearings have same dimensions as 6000N Series. They are designed to take exceptionally heavy thrust loads in addition to radial loads.

## Fafnir Magneto Type Bearings 5100, 5200, 5300 Series.

These bearings are largely used in magnetos and starting and lighting units.

### *Largest Assortment of Types and Sizes in America*

*Following is a list of distributors of Fafnir Ball Bearings. Substantial stocks are carried by all distributors and prompt and efficient service will be rendered by them on receipt of orders and inquiries.*

# BEARINGS SERVICE COMPANY

# NATIONAL SERVICE ORGANIZATION OF TIMKEN, HYATT & NEW DEPARTURE

On the right hand page of this advertisment are pictured the twenty-six Branches of the Bearings Service Company, the official authorized service organization of the Timken Roller Bearing Co., the Hyatt Roller Bearing Co., and the New Departure Manufacturing Co.

These branches are located in the principal cities of the United States. Under them operate more than 750 Authorized Distributors.

This means that there is a Branch or Authorized Distributor near you where you may obtain *genuine* Timken, Hyatt and New Departure Bearings and where there are official factory records which enable you to always obtain the *correct* bearing.

Use this service whenever you need a bearing for any make of motor car, truck or tractor ever manufactured.

## BEARINGS SERVICE COMPANY

***General Offices:*** **Detroit, Michigan**

***Branches in Following Principal Cities***

# Quality

ANTI-FRICTION bearings of the ball type, such as the New Departure Double Row or Radax, are the only bearings that will successfully withstand thrust loads with absolutely no resultant wedging action.

When other than ball bearings are employed, these thrust stresses intensify the internal pressures even as the blow of the woodsman's sledge intensifies the side pressure of wedge against log.

Nothing moves so easily as a ball. No other form of load-carrier moves with so little frictional resistance. That is why ball bearings reduce the evils of friction in your motor car or other machinery to a minimum.

THE NEW DEPARTURE MFG. CO.,
Bristol, Conn.

447

Makers of S R B Annular Ball Bearings, Taper Roller Bearings, Steel Balls and *Rudge-Whitworth* Wire Wheels.

SRB

## *Standard Bearings will withstand greater overloading*

The design allows for more balls than any other bearing, making possible a smoother and more even distribution of the load.

This standard principle of load distribution, backed by exacting selection of materials, and by scrupulous accuracy of workmanship, has produced a bearing of much greater strength and longer life.

**STANDARD ROLLER BEARING CO.**

# Pioneering

When you buy Gurney Ball Bearings you get, not an experiment, but a product of proven worth.

Back of the name GURNEY are fourteen years of study, experiment, tryout, of patient and intelligent development of design, material, and processes.

When you submit your bearing problems to the Gurney Service Engineering Department, you reap the reward of our pioneering. You get a finished product, of KNOWN capacity, efficiency, and durability.

P. W. Gurney.

# ZENITH CARBURETOR

## Good Carburetion

**—means a substantial saving in fuel**
**—means owner satisfaction.**

When the U. S. Naval experts chose the Zenith carburetor for the Trans-Atlantic planes, they based their choice on the actual records of reliability and economy established under their official observation in long and varied service.

In this first flight across the Atlantic, marking a new epoch in the world's history, lives depended on the fuel supply not being wasted. The success of the NC4 bears convincing testimony to Zenith Economy.

The owner of a Zenith equipped passenger car or truck enjoys delightful freedom from carburetion troubles—can understand from his own experience:—

—Why it takes four factories—three in Europe and one in America—to supply the world-wide demand.

—Why the Nieuport plane which beat all the world records for altitude—30,800 feet—had Zenith carburetors fitted to its Hispano-Suiza engines.

—Why Zenith is used by a majority of European automobile manufacturers, including Delage, Peugeot, Gregoire, DeDion and many other well known makers.

—Why it is used by over one hundred manufacturers of passenger cars and trucks in the U. S. A.

—Why YOU should use Zenith Equipment.

"NORMA" PRECISION BALL BEARINGS
(PATENTED)

The cost of the failure of a bearing in a magneto or lighting generator, is not simply the cost of the repair or replacement. To that — and properly chargeable to the bearing failure — must be added the value of the service lost from the car, truck, or tractor, while repairs are being made.

Magneto and generator builders who feel their responsibility to builders and owners of cars, trucks, and tractors using their apparatus, standardize on "NORMA" Bearings as a measure of service-insurance to their customers.

Be SURE. See that Your Electrical Apparatus is "NORMA" Equipped.

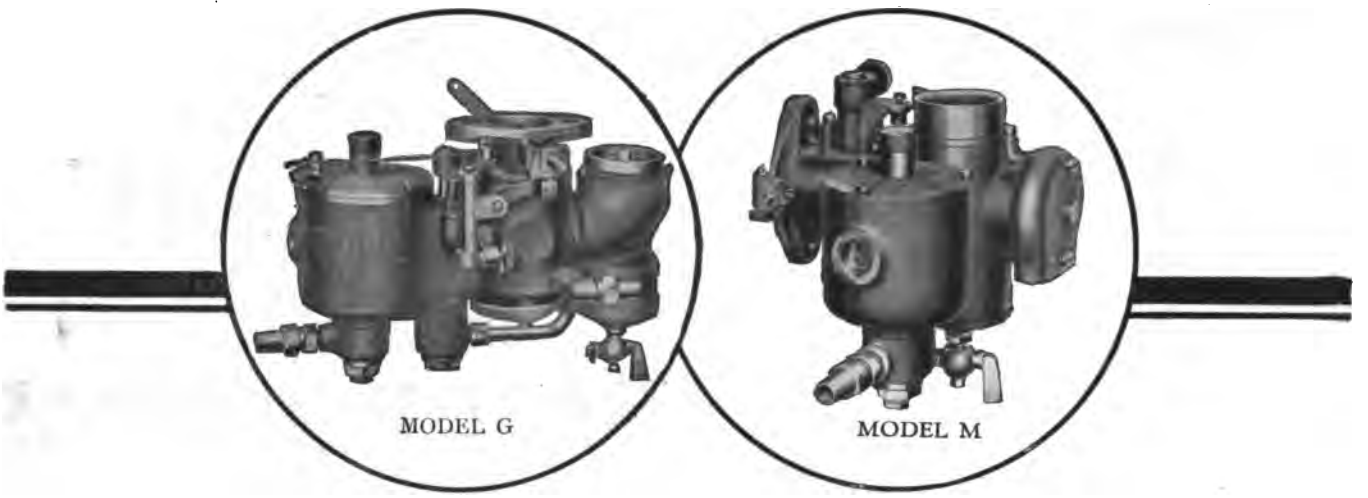
# Rayfield Leadership Acknowledged by Engineers for Ten Years



For ten years the Rayfield Carburetor has been recognized by America's leading motor car engineers as setting the standard for carburetor performance.

They know that the design is mechanically correct and that the accuracy with which it is built insures consistent operation under all conditions. It is this knowledge which has led Rayfields to be specified repeatedly as standard equipment on so many high-grade cars.

Naturally it costs more to build so perfect a carburetor. Manufacturers have proved, however, that this cost is justified by the added superiority of performance it gives their cars with the resulting satisfaction to the motorist.

Distributors and Service Stations everywhere.

Vol. VI. AUGUST, 1919 No. 2

# Selecting and Selling the Right Line of Trucks

## Why the Prospective Truck Dealer Should Survey His Territory Thoroughly Before Closing for an Agency

*By EDWARD G. INGRAM*

THE dealer who is about to take on a motor truck agency should analyze his territory and select a line of vehicles suited to the particular conditions obtaining in his locality. The sale of trucks depends largely on the characters of trades and industries in the territory. These, of course, differ in different localities. A city located in a farming region presents a different problem from one located in the heart of a manufacturing district. The conditions to be met in a large city differ from those in a small city or town.

It is essential, therefore, for a dealer to know the real marketing possibilities of his zone in order to select the most suitable line of trucks to handle. He must study his prospect's transportation problems in order to determine upon the size, type and price of trucks required.

The success of the dealer depends upon the satisfaction given by the trucks he sells and this in turn depends largely upon furnishing each prospect with the particular truck most suited to his needs.

In a small town where the average capitalization of the business firms is less than $10,000 it is absurd for a dealer to take on and try to sell a line of heavy duty trucks selling at around $5,000. Tradesmen conducting dry goods stores, grocery stores, butcher shops, etc., usually require moderate sized trucks. In manufacturing zones, on the other hand, large, heavy duty trucks are required.

After having decided upon the type of truck best suited to his territory the dealer has to take up the question of what make of truck he will secure the agency for. There are many makes of trucks on the market and most of them are good, though some are better than others. The dealer should not have much difficulty in deciding on what make of truck to select. The fact that a particular make of truck is not well known does not necessarily mean that it is not good. Manufacturers which are now well known at one time were not, yet it stands to reason that their products were good from the beginning, otherwise they would not have met with success. Nevertheless the dealer should do some investigating before taking an agency. After becoming interested in a particular line of trucks it is an excellent plan to look up the nearest agency handling this make and get some facts as to how it lines up as an agency proposition.

Having secured an agency for a good make of truck the dealer has the satisfaction of knowing he has made a thorough investigation of the matter and can believe in the product he is selling.

Th next subject for the dealer to take up is the question of displaying his line. The truck salesroom should be attractive but not ostentatious. A truck is built for service, not for looks, and it stands to reason that it should be displayed in fitting surroundings, which should be neat and businesslike rather than luxurious.

After a suitable salesroom has been established a list of prospects should be compiled. Such a list can be obtained from well known sources which include the city directory and telephone book. It is well to scan the list of passenger car owners with a view to finding possible truck prospects. All business houses likely to need trucks should be listed.

An advertising campaign should also be started. This should be carried out in a consistant way. Advertisements should be regularly run in local newspapers. Circular letters, folders and other literature should be sent out at regular intervals. The best results are usually obtained from circular letters which are short and to the point. These should be sent to all prospects, which should include every firm which delivers goods.

Truck prospects seldom come to the dealer. It is up to the dealer to go and hunt them up. This means personal calls and plenty of hard work. A truck sells largely on its performance. Figures are of great value in connection with this, and for this reason every truck salesman should be more or less of a

# Airplane Becoming Important Factor in Sales and Service

## How Different Automobile Companies Are Making Use of Airplanes as a Means of Giving Quick Service and Pushing Sales

THAT the airplane is fast becoming an important factor in the furthering of automobile sales and service is becoming obvious.

The recent flights of the George W. Browne aerial express planes between Milwaukee and Toledo establishd the utility of the aeroplane as a transportation factor.

George W. Brown of Milwaukee, who inaugurated this service is western representative of the Curtiss Aeroplane Corp., and distributor for Willys-Overland, Inc.

These planes, carrying a consignment of tires for the Willys-Overland Company at Toledo, from the Federal Rubber Company of Cudahy, Wis., on the outgoing trip and a number of Overland automobile parts on their return, completed a successful trial trip between Milwaukee and Toledo.

The two planes, piloted by Lieut. Milton Elliot and Lieut. Shirley Short, originally departed from Cudahy, Wis., with their cargoes of Federal Tires stopping at the Browne aviation field in Milwaukee. From there they flew to Chicago and thence to Toledo. On the return trip they transported a quantity of Overland parts to the Brown salesrooms in Milwaukee.

HOW AIRPLANE SERVICE SAVED THE DAY FOR MILTON

Airplane service saved the day for Tommy Milton, driver of the Duesenberg car in the recent Union-

LOADING PLANE WITH FEDERAL TIRES PREPARATORY TO MAKING FLIGHT FROM CUDAHY TO WYLLYS-OVERLAND BRANCH AT TOLEDO.

town races, when he broke a front wheel bearing just twenty-four hours before the race was scheduled. He spent four hours of this precious twenty-four vainly searching for this part in Uniontown and Pittsburg and finally, as a last hope, wired the home office of the Bearings Service Company in Detroit for the bearing.

The way in which the Bearings Service Company rushed the bearing to Milton by airplane the following morning in time for the latter to enter and win the race, is described by the company as follows:

How Tommy Milton, back on July 19th, smashed all former track records, and won the Independence Derby at the Uniontown races is now only a piece of track history.

But how the real race, the one you didn't see, started a trifle after dawn, running through six gruelling morning hours, finished, a bit less spectac-

READY FOR THE "HOP OFF."

ularly, but none the less triumphantly, is related by Milton himself. The performance on the speedway was a triumph of auto racing, but back of the curtains was a triumph of auto service.

Milton was driving a Deusenberg car, and on Friday, while tuning up for the races next day, broke a bearing in his front wheel. That broken bearing came mighty near putting Milton out of the race. Of course he tried hard to secure the bearing in Uniontown and Uniontown boasted much in the way of spare parts. No part of this variety was available however, and Milton became desperate. He went to Pittsburgh and ransacked every likely spot and in this case found Pittsburgh as barren of comfort as a New York cabaret on July 1.

Now everybody knows that Detroit is the home of not only most of the automobiles, but of the parts of which these automobiles are made as well. It would be easy to get the missing part in Detroit. The rub came in fact that Detroit was many miles distant and the races were scarcely twenty-four hours away.

Detroit though, was the only hope, and to Detroit Milton turned. An order was wired to the Bearings Service Company there. They had the bearing but could not hold out very much hope that Mr. Burleson's Department could deliver it much earlier than the Monday following the races. In fact in the light of present P. O. conditions, they weren't sure that he would ever receive it. Milton wired for service, he must have that bearing within twenty hours, —and Milton got it.

H. J. Detterich, an official of the Bearings Service

Digitized by Google

Company, knew of only one way to get the bearing to Milton in time for the race. It was only a hunch but he played it—hard. It was almost midnight when the final frantic appeal was received from Milton but that didn't interfere with Detterich's plans.

The Universal Aviation Company was located at Morrow field,—just outside of Detroit and Mr. J. T. Patterson the general manager of the company was hauled, not too willingly, from his bed and requested to have a plane and pilot ready for a trip to Uniontown by day break. The plane was easy, the company had oodles of 'em, and Lieutenant C. A. Stocking—more commonly called "Sox" agreed to attempt the flight. He had never been so far away as Uniontown before, but if Mr. Detterich was willing to risk his neck, he was willing to try. So he dug up a road map, somewhere, and drew a pencil line from Detroit to Uniontown. If they were to arrive in time, they must fly as the proverbial crow does.

The sleepy mechanics who had been working on the plane half the night, held them up well after sun-up before they would pronounce the plane ready for flight. That made the hour a little after five. A fog followed the dawn, and as it would have been useless to start, with this shroud covering all the landmarks, another precious hour went by the board. But they got away a little after six o'clock with Stocking in the pilot's seat and Detterich riding behind him. It may have been the cold of the early morning, or the wind from the drift of the propellor, or only the vibrations of the fusilage that caused Mr. Detterich's knees to tremble a little. But pulled from a comfortable bed at day break to suddenly to take ones first ride in an airplane isn't as conducive of enthusiasm as might easily be supposed, but the sensation soon passed.

Stocking drove for exactly three hours and fifty minutes, when trouble began brewing in the engine. Honestly, he hadn't expected it to last that long, and finally, he was forced to land. As something had to be done quickly, when a plane runs out of

HOW THE BEARING SERVICE CO. DELIVERED A BEARING IN RECORD TIME.

power, he did not stand on the order of his landing but brought up on a hill a few miles from Wheeling.

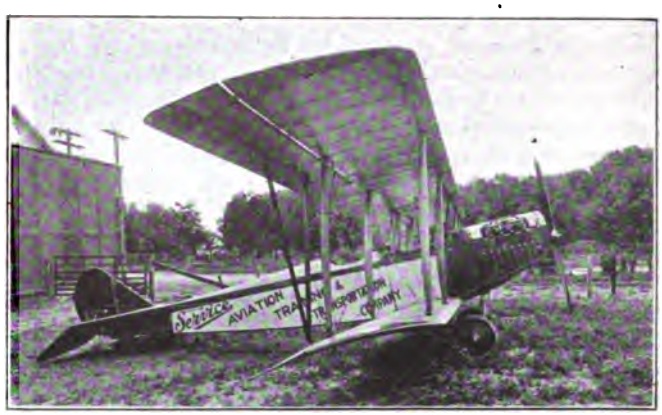
Now Wheeling, as everybody knows, is a far, far cry from Uniontown, and the landing place which the plane itself had chosen was somewhat short of human habitation. A farmer who owned an automobile was finally found and the race was on again. It was not the best automobile in the world nor the most comfortable, but under duress it managed Uniontown by 12:15 after two and one-half hours of driving.

The spare part was handed to Milton a good two hours before the race. He, and his mechanicians adjusted it, and a little later, Milton had that Duesenberg traveling 100 miles an hour.

Meanwhile, the air airplane was lying in the wet grass on the mountain slope, and the Wheeling farmer's auto was limping back home. But the race was won.

USING AN AIRPLANE TO PUSH SALES

The Service Motor Truck Co. has conceived the novel idea of offering an airplane as a prize to the service dealer who makes the most sales. A definite quota arrived at in the fairest possible manner, has been set for every distributor, dealer and service representative. The winner will be the organization whose percentage of gross business for the period



AIRPLANE OFFERED BY SERVICE MOTOR TRUCK CO. TO DEALER MAKING MOST SALES.

between July 1 and December 31, 1919 is greatest in excess of the quota set. In addition to the prize, which, it is stated is worth $5,000, the winner will receive a free course of training at the service aviation field.

### Chrysler to Direct Wholesale Department of Hurlburt Motors

P. C. Chrysler, formerly manager of the Philadelphia branch of the Hurlburt Motor Truck Co., has been appointed director of the wholesale department of Hurlburt Motors, Inc., 8-10 East 39th Street, New York City, which is the new company formed to take over the sale and distribution of Hurlburt trucks. Mr. Chrysler, who is well known through his experience in motor trades, will confine his efforts for the time being to the Eastern district.

### F. I. Reynolds Joins Keystone Tire & Rubber

F. I. Reynolds, well-known in the tire industry and for many years with the United States Tire Co. in the capacity of sales manager of pneumatic tires, has now joined the Keystone Tire and Rubber Co., as its sales director.

Before going with the United States Tire Co. Mr. Reynolds was with the B. F. Goodrich Co.

The Grip Nut Co., Chicago, has purchased 250,000 sq. ft. of land between Western Avenue and the Baltimore & Ohio terminal, upon which it will build a plant with equipment costing $500,000. The company now has plants in South Whitley, Ind., and Columbus, Ohio. Construction will begin immediately.

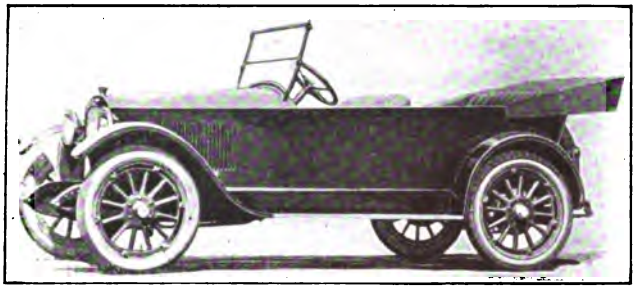
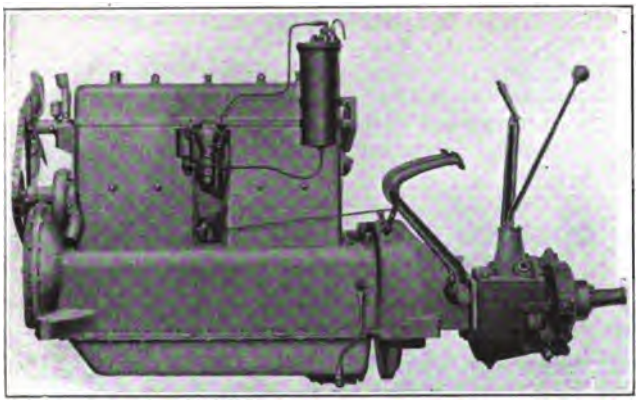
# Features of Cleveland Car Revealed

Details of the new Cleveland car, which is about to be placed on the market by the Cleveland Automobile Co., Cleveland, O., have been revealed. The car is a light six with a wheelbase of 112 inches, and the touring model lists at $1,385.



Overhead valves are used on the engine, which has a bore of 3 inches and a stroke of 4½ inches. The cylinders are cast in a block separate from the crankshaft, and are provided with a detachable head. The valves are operated by push rods, the camshaft being located in the base, and are completely enclosed. An adjustable silent chain is provided for driving the camshaft and accessories and a Stromberg carburetor and Gray & Davis starting and lighting system are used.

The three-speed gearset is mounted in a unit with the engine and the main shaft is carried on annular ball bearings. A disc type clutch is used and the drive shaft is furnished with two universal joints. The rear axle is of the full floating type and has a pressed steel hous-



ing. Timken bearings are used throughout. Both the engine and axles are manufactured by the company itself.

Semi-elliptic springs are used both front and rear, the rear springs being underslung. The wood-artillery wheels are provided with 32 by 4 inch tires and demountable rims. The bodies are finished in Cleveland blue and upholstered in hand-buffed long grain leather. Hood, fenders and running boards are finished in black enamel.

---

### New Reo Will Be a Six

The new Reo, manufactured by the Reo Motor Car Co., Lansing, Mich., will be a six instead of a four. The new engine will have the same valve arrangement as in the past, but the cylinder-head will be detachable. The cylinder dimensions will be 3 3/16 by 5 inches, and the engine will develop its maximum power at 2,750 r.p.m. The touring model will have a wheelbase of 120 inches and will list at $1,650.

### New Westcott More Powerful

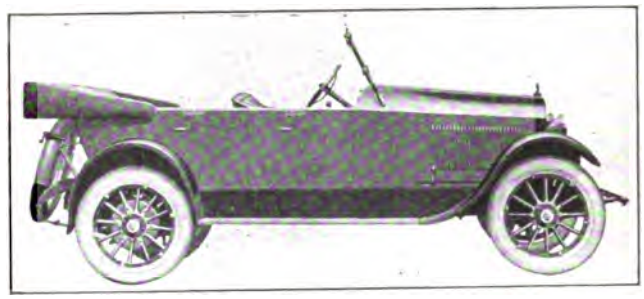
The new Westcott light six, which the Westcott Motor Car Co. announces is now in production, has a Continental type 7-R engine of improved design. It is stated that the car shows exceptional hill-climbing ability and that experimental cars have attained a speed of 65 miles per hour and an average of 18 miles to the gallon of fuel.

The transmission is in a unit with the engine, which has a bore of 3¼ inches and a stroke of 4½ inches.

The cylinders and pistons are cast from a special grade of reverberatory air furnace iron and the crank case is of aluminum. The cylinder head is removable.

The head diameter of the valves is 1⅝ inches. The lift for both inlet and the exhaust is 5/16 inch.

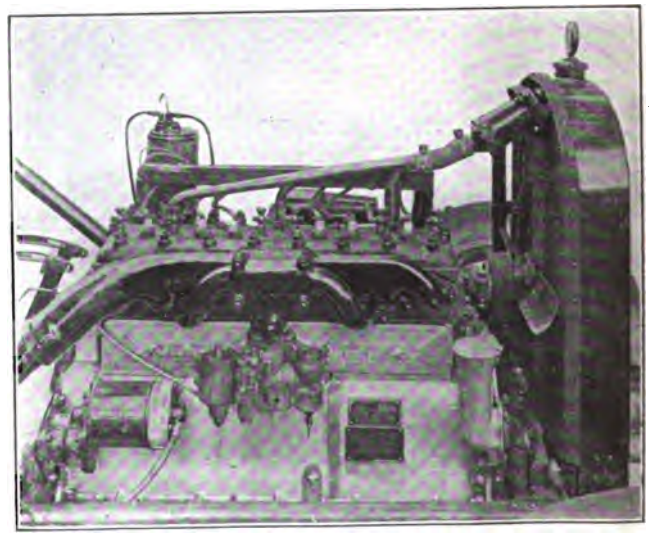
The exhaust manifold is on the righ side of motor. The intake manifold is also on the right side and cast integral with the exhaust, forming the hot spot type of construction.



The crank shaft is four bearing type, 2¼ inches in diameter.

The oiling system is worthy of special note. Lubrication is accomplished by means of a gear type oil pump producing a 35-pound pressure feed through drilled crankshaft to main bearings, connecting rod, lower end bearings and gear case, with an oil vapor for all other parts.

Cooling is provided by centrifugal water pump, with automatic thermostatic regulation. A fedders individual cellular tube, or honeycomb type radiator is used. Further cooling efficiency is obtained by a 3-way outlet water pipe to radiator instead of the usual one-way



practice. One pet cock at bottom of water pipe drains entire system.

A specially designed Rayfield carburetor is bolted to

# Electric Arc Welding

## Discussing the Development of Electric Arc Welding and Welding Machines and Describing the USL Arc Welder*

OF the many welcome by-products of the great war perhaps one of the most interesting to manufacturers is *electric arc welding*. Although in use in a modest way for twenty years, it was not until the pressure of war made it necessary to speed production, that electric arc welding came into its own. Arc welding made possible the quick repair of the machinery which the Germans thought they had permanently wrecked in their interned ships. Arc welding saved many locomotive days on our overworked railroads by cutting down time in the shop. Arc welding increased production and salvaged tremendous quantities of rough and machined castings that would otherwise have been scrapped. Arc welding as a substitute for riveting in the construction of ships has been tried and found successful; and it is difficult to even conjecture how much further its usefulness may extend.

In reviewing Capt. James Caldwell's comprehensive report to the United States Shipping Board Emergency Fleet Corporation, Prof. Comfort A. Adams, Chairman of the Electric Welding Committee of that Corporation, President of the American Welding Society and President of the American Institute of Electrical Engineers says:

"Recent tests of fifteen different types of *arc welds* on ship plates, shows an average tensile strength of 58,800 lb. per square inch and about 94 per cent of the plate strength. Some broke entirely outside of the weld. These were butt welds; when used with a light butt strap, joints of more than 100 per cent strength can be assured as against 75 per cent for a double row of rivets, water-tight spacing. These results are in accord with the latest results from England.

"On the whole, the present opportunities for autogenous welding (electric arc welding is autogenous) are almost unlimited, not only in the shipbuilding field, but throughout practically every other field of manufacture, and the work is expanding so rapidly that it is difficult to keep track of it."

Electric arc welding when done with properly designed equipment is a safe, dependable and economical process. The cost of arc welding with efficient machines is remarkably low. Often jobs are done that would cost three or four times as much to do with oxy-acetylene gas and as high as ten times as much by other methods. In fact, an arc welder will frequently be called on to do work, such as overhead welding, which could not be done by these other methods. Because of these big savings in shop time and welding costs, an efficient arc welding machine will pay for itself in a very short time, whether it be installed in a small auto repair shop, in a large shipyard, or in the shops of a railroad system.

The arc welding process most widely used today is the Slavianoff or metallic electrode process, Slavianoff being the name of the man who first used a metallic electrode for supplying new metal to the weld. In this process the heat of an electric arc drawn between a wire electrode, and the work being welded melts the electrode, carries it over in the arc stream and deposits it on the work. Simultaneously, the arc heats the metal of the work, to the fusing point so that the new metal fuses with the work as rapidly as it is deposited.

The arc is established by touching the work with the electrode and withdrawing it about an eighth of an inch. The voltage across an arc of this length is in the neighborhood of only 20 volts. The current used varies according to the thickness of the work, and for metallic electrode work ranges from 50 to 200 amperes. It is so much easier, and in most cases more economical, to make satisfactory welds with a direct current arc than with an alternating current arc that direct current is invariably recognized as best for welding.

It is then, the function of a modern arc welding machine to convert electrical, or mechanical energy into direct current at the voltage and current range required for arc welding.

The first arc welding machines were simply rows of resistance grids which were inserted in series with the arc on a 100 to 600 volt direct current circuit. Although such an arrangement gives an efficiency of less than 4 per cent on a 600 volt circuit, the advantages and economies of arc welding over other methods are so pronounced that some railway companies still continue to throw away 116 kw. in order to produce 4 kw. at the arc. Machines that operated with better economy and which were equipped with rather complicated regulators for controlling the current were then introduced and because of their advantages caused a rapid increase in the use of arc welding.

Aiming at still better efficiency and operating characteristics, the U. S. Light & Heat Corp. set its engineers to work on the designing of a welding machine which would control the current without regulators. Their efforts resulted in the development of USL arc welder.

This welder is a variable voltage type of machine for generating 200 amperes, or less, direct current at the voltage range required for arc welding. The equipment is intended for single operator use and comprises a motor generator or a converter, a switch and meter panel, an arc stabilizing reactor, an electrode holder, a face shield and for portable use a truck and cable reel with two fifty foot lengths of flexible cable.

The welder may be adjusted to have either a constant energy or constant current tendency throughout the welding range and there is no danger from shortcircuiting the welding circuit.

To enable the operator to vary the current to meet his requirements the welder is equipped with both a voltage adusting rheostat and a current adjusting switch. The latter has four points giving with slight variations of voltage any desired current from 50 to 200 amperes. The voltage adjusting rheostat enables the operator to vary the open-circuit voltage from 35 to 65 volts. With an open-circuit voltage of 40 the approximate currents obtained with the different settings of the current adjusting switch are 65, 105, 150 and 200 amperes.

*From Bulletin of U. S. Light & Heat Corp., Niagara Falls, N. Y.

### Stevens-Duryea Again to Make Cars

The Stevens-Duryea Co., Chicopee Falls, Mass., reorganized with Ray S. Deering as president and Thomas L. Cowles as chief engineer, will shortly commence manufacture of a new type, high-grade car bearing the company's name. The concern has taken the old Stevens-Duryea factory utilized during the war by the Westinghouse Electric Co.

### Essex Roadster Now Offered

In addition to a touring car, the Essex Co., Detroit, is mounting a roadster on the same chassis.

NEW ESSEX ROADSTER.

The car is finished in the same green as the Essex touring car, with black wheels and will sell for $1,595, fully equipped.

### Dual Battery Ignition on New Pierce-Arrow

A new system of ignition and a new transmission are novel features of the new dual valve Pierce-Arrow Six, just announced.

The ignition is by double battery system, designed by the Delco Co. in collaboration with Pierce-Arrow engineers. According to Chief Engineer David Fergusson, the new system is as reliable as the magneto-battery, and entirely overcomes the difficulty of synchronization. Pre-ignition from the magneto at high speed no longer is possible. Instead, two timers and distributors, working in unison, give sparks simultaneously at all speeds.

Safeguards to conserve the battery current have been devised. When the car is left in a locked position the battery automatically is disconnected from the engine and the head lamps are shut off. The small bulbs used for signal purposes at night can be turned on, however. They consume so little current that there is no danger of battery depletion. The new transmission was designed to facilitate gear changing.

### Cole to Sell Traffic Trucks in Canada

E. S. Cole has been appointed Canadian sales representative of the Traffic Motor Truck Corp., St. Louis, Mo. He was for many years identified with the White Co. and later sold Little Giant trucks in Missouri, Arkansas and Oklahoma. For the past twenty months he has been instructor in the balloon service of the Missouri Aeronautical Society.

### Hillstrom Made City Sales Manager of Traffic

R. A. Hillstrom has been appointed city sales manager of the Traffic Motor Truck Corp, St. Louis, Mo. Mr. Hillstrom has had long experience in motor truck sales and has already assumed his duties in St. Louis, having added to the city sales force, E. Riedinger and Fred. W. Schwebel.

### International-Wright Merger Gets Approval

Directors of the International Motor Truck Corp. and the Wright-Martin Aircraft Corp. have approved the plans for a merger of the two companies, which will be carried out by a committee of leading shareholders of both concerns.

Wright-Martin preferred shareholders, under the plan, will receive $120 par value of International Motor first preferred for each of their present shares and accumulated dividends. Wright-Martin common holders will receive for each 100 shares 2.8 shares of second preferred and two shares of common stock of the International Motor along with twenty-five shares of no par value stock of the new Wright-Martin company, which will conduct the aircraft business. International Motor will increase its capital for this purpose.

### 246,267 Vehicles in Motor Transport

A total of 122,128 passenger cars, ambulances, trucks, motorcycles, bicycles and trailers form the motor transport strength of the United States Army in this country, with 124,139 in France, according to a statement by Brigadier General C. B. Drake at a recent Congressional hearing,

Of these, passenger cars in the United States total 9592, in France 9809; motor trucks in United States, 57,712, in France, 51,781, and motorcycles in the United States, 16,712, in France, 22,802.

Under the plans arranged for an army of 500,000 men on a peace basis the War Department will require 4,182 passenger cars, 20,973 motor trucks, 10,170 motorcycles and 3,591 trailers.

The Motor Transport Corps on a peace basis will include 20,737 enlisted men and approximately 1,148 officers.

### Selecting and Selling the Right Line of Trucks

*(Continued from page 9)*

transportation engineer. However, while figures are of value, actual performance on the road is often what sells a truck.

There are really two ways of selling a truck. One is to show the prospect that by the use of it he will save money. The other by convincing him that it is a valuable means of expanding his business. The best way of attacking the subject will depend upon the individual case.

### New Westcott More Powerful

*(Continued from page 12)*

intake manifold. The Delco starting motor with Bendix pinion drive is mounted on right side of motor and attached to crank case, driving through teeth on the flywheel. The Delco lighting generator is driven by the water pump shaft and is attached to left side of the engine.

The engine develops 25 horsepower at 1,000 r.p.m. and reaches a maximum of 55 horsepower at 2,650 r.p.m. The S. A. E. horsepower is 25.35 with a piston displacement of 224 cubic inches.

In a final summary the increased power can be attributed to a thorough smoothing out of the motor, thus reducing vibration to a minimum, and securing considerably higher speed. A redesigned cylinder head producing a more efficient firing chamber, the use of a four-bearing crank shaft, enlarged bearings throughout, extremely rigid crank case, high pressure oiling system, enlarged valves and quick valve action are factors responsible for the improved performance.

Insertion of new advertisements or change of copy cannot be guaranteed if received later than the 25th of the month preceding the date of publication.

WHILE the subject of efficient lubrication of the motor car has received much attention, it is a surprising fact that really crude methods of oiling certain units of the chassis are still in almost universal use. Engine oiling systems have undergone rapid development, probably owing to the fact that inefficient lubrication at this point is almost sure to result in serious damage. The primitive form of splash oiling system first used in which oil was replenished by an hand pump soon was replaced by the constant level system in which oil was forced by an engine driven pump to troughs which overflowed, thus maintaining a constant level and ensuring a fixed instead of variable supply of lubricant to the working parts. This was followed by the force feed and constant level splash system, still used extensively, in which the oil is forced to the main bearings while the rest of the parts are lubricated by splash. Finally the full force feed system was developed in which the crankshaft is drilled and oil supplied under pressure to all of the bearings, no splash being used. Thus it will be seen that development of engine oiling systems has been steady and in the right direction.

In the case of the gearset, however, we find almost the same system of lubrication in use today as was used years ago when motor cars were in the embryo stage of their development. This consists of simply filling the gearbox with grease, oil or a mixture of both.

Recent tests made by an English engineer showed that with the gearbox filled with oil and the car running on direct drive the efficiency was only 74 per cent, and with the gearbox one-quarter full the efficiency was 97.5 per cent. It is evident that if grease were used the efficiency would be even lower.

There appears to be little reason why a more efficient method of lubricating the gears could not be devised. For example, small pipes could be located opposite each gear and small streams of oil played on them. The surplus oil could be drawn from the bottom of the case by the same pump that delivered the oil so the gears would never dip, yet would be efficiently lubricated. The main and countershaft bearings could also be lubricated by special oil leads so that we would have a force feed oiling system for the gearset. An oil indicator could be placed on the outside of the gearset so that the operator would know when to replenish the lubricant in the same as in the case of the engine. There can be no doubt that the operator of a car would give more attention to the lubrication of his gearset with this arrangement than with the ordinary oil where the case is filled with lubricant, the cover bolted on and this part of the car forgotten about, usually until something goes wrong.

About as little progress has been made in the system of lubricating the rear axle as in the case of the gearset. Surely it is time for an improvement in the system of lubricating these units.

THE touring season is now at its height and the dealer in automobile accessories should take full advantage of this. He should not confine his efforts to selling automobile accessories alone, but should lay in a stock and push the sale of general touring equipment such as tents, trailers, portable stoves, lunch kits and the like. Thousands of such articles are sold every year and there is no reason why the automobile dealer should not get his share of this business. It takes little or no effort to sell such equipment because it is in such demand at this season. About all the dealer needs to do is to display it in an attractive and conspicuous way. Both show cases and show windows can be used for this purpose. A little effort in this direction will be almost sure to bring big results.

PICTORIAL posters are of great value to the dealer in selling passenger cars, trucks, tractors, accessories and, in fact, every kind of motor merchandise. Every dealer should impress upon the manufacturers he represents the importance of supplying him with as many attractive posters as possible. These posters should not only be placed in the salesroom and showwindow, but should also be displayed at conspicuous points throughout the territory covered by the dealer.

PRODUCTION of 314,936 tractors in the United States in 1919 is estimated by manufacturer reporting to the Office of Farm Equipment Control, United States Department of Agriculture. The reports obtained in a special inquiry by the department show a production of 132,697 tractors in 1918. The manufacturers gave the number of tractors of different sizes manufactured last year and estimates of the number of each size that will be made this year. The figures for 1919, of course, are merely estimates and represent the aggregate of the estimates submitted by the tractor manufacturers in January and February of this year. They indicate, however, how rapidly manufacturers expect the industry to continue to grow.

# What This Name Means on a Motor Car

When you see the Columbia name on a motor car, remember that it signifies a "good ALL the way through" machine.

## A Good Record

It's record is good. The Columbia Motors Company have never built a failure—have never had a "poor year." The fact that, to our knowledge, the Columbia Six has never had a dissatisfied owner, testifies to this.

## Appearance

When you see a Columbia Six you will need no comment on its appearance. You will stop and look at it—as everyone else does.

## Mechanically ALL Good

Mechanically, the Columbia Six is good clear through—from the Continental Red Seal Motor down to the smallest details. Every unit from which it is made is acknowledged by car experts to be as good as can be manufactured.

## Features

In addition, the Columbia Six includes two features which are recognized among the greatest improvements in motor car building during recent years—the automatic motor temperature thermostatically controlled and the non-synchronizing spring suspension. Tests have proved the former increases motor efficiency as much as 30 per cent. The non-synchronizing springs speak for themselves when you ride in the car.

These things, resulting in owner satisfaction, have placed the Columbia Six well up among the leaders in the minds of many car dealers throughout the country. We shall be glad to have you find out what they are doing—what the owners think—and what our dealer proposition is.

*Specifications: Timken Axles — Continental Red Seal Motor — Detroit Pressed Steel Company Frame — Harrison Radiator with Thermostatically Controlled Shutters — Spicer Universal Joints — Borg & Beck Clutch — Detriot Steel Products Company's Springs — Gemmer Steering Gear — Auto Lite Starting & Lighting — Atwater-Kent Ignition — Stromberg Carburetor — Presto-O-Lite Storage Battery — Painting and Trimming by The American Auto Trimming Co. — Pantasote Top.*

# The Time to Prevent this is in the Making

BROWN-LIPE
CHAPIN
DIFFERENTIALS

The SLIGHTEST seam or flaw in a gear blank, if used, means a truck or car in the shop—sooner or later.

Brown-Lipe prevents this by—REJECTING THAT GEAR!

The first operation is an inspection that finds every exposed flaw, or suspicious seam. Then by inspections after each machining and heat treating operation, every gear or pinion that raises doubt about quality is thrown out.

This most careful consideration of value to the ultimate owner of the truck or car that contains a Brown-Lipe Transmission or a Brown-Lipe-Chapin Differential is insured by EVERY step in the process of their manufacture.

**BROWN-LIPE-CHAPIN CO.**
**DIFFERENTIALS**

**BROWN-LIPE GEAR CO.**
**TRANSMISSIONS**

**Both at SYRACUSE, N. Y.**

**No. 2 of 40 Reasons for Superiority**

# The Catalogs Tell the Story

Those motor-car builders whose catalogs are shown here are representative of the ones who are using Westinghouse Equipment. Their total exceeds by more than *fifty per cent* the number of car builders standardizing on any other make.

What better indication of quality could there be?

It's plainly written in these catalogs that Westinghouse Equipment *is* unquestionably *worth* more.

*For your own protection and to keep valid the Westinghouse guarantee, use only Westinghouse repair parts, which can be obtained from authorized service stations in all parts of the country.*

# Success of Semi-Trailers for Transporting Ice Cream

"JUST as the motor truck naturally supplanted the horse and wagon, so will the semi-trailer-truck unit supersede the motor truck in the transportation of ice cream," asserts Robert Johnson, superintendent of the motor vehicle department of the Arctic Ice Cream Company of Detroit.

And Mr. Johnson has logical reasons for his opinion, which has been formed after operating semi-trailers for four years.

"Today," said Mr. Johnson, "semi-trailers have become a necessity in the efficient operation of our delivery system—and I am frank in saying that we couldn't get along without them."

The Arctic Ice Cream Company purchased its first semi-trailer from the Fruehauf Trailer Company of Detroit four years ago. The transportation unit gave such satisfactory service that three months later seven additional trailers were bought. Early this spring two more Fruehauf trailers were placed in service and the company is now operating ten trailer-truck units, all of four and six tons capacity. However, Mr. Johnson states that when loaded, six and eight ton loads are hauled on the trailers.

The trailers are operated in connection with 1½-ton trucks and are designed especially for transportation of ice cream. The bodies are full paneled and sheeted inside, allowing for a three-inch air space to act as an insulator. The forward end is separated from the rest of the body by a partition and is accessible through doors in the front. This compartment is used as a container for the refrigerators, carrying brick cream and specials, and serve as a receptacle for empty cans. The water tight flooring slopes toward the center and to the rear, thus allowing for drainage of the salty water and to keep it from coming in contact with the mechanical parts of the trailer or tractor. These parts are in this way protected against the corrosive action of the brine.

After cans of ice cream are placed in tiers in a trailer, a trap door in the roof of the trailer is opened and pulverized ice and salt enters the trailer body through spouts by gravity action. The force is sufficient to pack the ice around the cans of ice cream.

The trailer-truck unit then starts out on its trip to stores on its route which is so arranged that the last can of ice cream is delivered only a short distance from the Arctic Company's plant and the trailer-truck can then be filled with another load of ice cream. The loading operation requires but a short time and the units are kept in operation almost continually.

Mr. Johnson states that the operation expense connected with a trailer-truck unit which hauls seven or eight tons is much less than the cost of operating a 5-ton truck. Gasoline consumption is about one-half less and tire expense is also greatly reduced. The tires on the trailers which have been operated three years show practically no wear and will stand up for thousands of additional miles.

The gasoline consumption of the 1½-ton trucks which haul six and eight ton loads with the trailers averages six miles to the gallon while the gasoline consumption of 5-ton trucks which would be required to replace the trailer-truck units would average three miles to the gallon. The operation of trailers in connection with 1½-ton trucks has enabled the Arctic Company to reduce its investment in transportation equipment several thousand dollars.

The ten trucks and trailers, having a total hauling capacity of 70 tons, represent an investment of approximately $37,000; ten 5-ton trucks, which could haul 70 loads only by overloading, would cost about $49,000 or $12,000 more than the Fruehauf trailer-truck units.

### New Porter Car on Market Soon

Quantity production of the Porter car, which has been for more than four years in the experimental stage, bearing the initials of its originator, Finley R. Porter, will be undertaken in September. Manufacturing will be carried on at Bridgeport, Conn., by the American & British Corp., licensed by Porter, one of its directors, as exclusive producer of the machine during the next ten years.

The Porter, equipped with the Porter engine of more than 100 hp., will be manufactured complete at the Bridgeport plant, and will sell for about $5,000.

Distribution will be handled by the Morton W. Smith Co., New York City.

### Refinements in Maibohm

Greater comfort and increased strength, as well as new body designs, feature the new models of the Maibohm line, the announcement of which has just been made by the Maibohm Motors Co., Detroit. The coming model has a phaeton body with slightly lower cowl and a pronounced bevel line extending the entire length of the car, giving a smarter and more handsome appearance. The frame and springs are increased in strength for more comfortable riding.

In line with the principle of easier riding and more comfortable qualities, a more flexible and deeper seat cushion and back springs have been added. Motor and mechanical equipment remain unchanged.

SOME observers, asking themselves the question how long prices will remain at high levels, have reached the somewhat Bolshevik conclusion that the Government is really responsible for the continued inflation. They figure that the high levels cannot possibly be abandoned until the Government guarantee on wheat expires and the lordly farmer has taken his profit. Then, but not till then, they believe, basic commodities can be expected to descend, and other prices to follow. But does anyone for a moment imagine that the farmer is incapable of foresight. Is it possible that he will fail to discount the effect of lower prices after the guarantee is off, and safeguard himself against loss when planting time comes 'round. It must be remembered that the farmer is the only business man who is perfectly free to manipulate his market without risking so much as a single word of criticism. If he is long of his market and his potatoes rot in the cellar, the middleman is blamed, but no one ever suggests that the farmer has been gambling. So, if the farmer has his way, food prices will stay up for quite a while to come. Wages and prices on many lines of material, will remain up as long as food costs are high, and so will resale prices all along the line—*Automobile Topics.*

---

IN the past, engine development has been along the lines of greater flexibility, more silent operation and increased power in proportion to weight or displacement volume. In all of these respects the automobile engine has attained a very high standard. Little attention has yet been given to the problem of improving the fuel economy of the engine and it is obvious that under present conditions fuel economy is a very important characteristic. While the achievements in engine design in regard to flexibility, silence and high weight efficiency are highly valued, it may be necessary in the future to sacrifice some of the progress made along these lines in order to increase the fuel economy or make possible the use of cheaper fuels than the present motor gasoline. At any rate, any new design of engine will be judged very largely on the basis of its fuel economy.

It is for this reason that not much can be expected from super-induction engines in which the working cylinder is filled with charge to a pressure above atmospheric. Such an engine may be justified for war plane service where cost is a negligible factor and maximum speed counts for everything. But it is not a commercial possibility in an age where fuel conservation is one of the great needs.

A gasoline engine of the conventional four stroke type receiving more than a normal charge of explosive mixture works under substantially the same conditions as a steam engine with late cut-off. Both will develop abnormal power at the expense of economy. The chief reason for the decreased economy in the gasoline engine is that at the end of the stroke, since there is a great deal more burnt gas in the cylinder, the pressure of the gases—that is, the exhaust pressure—is much higher, and much more energy is thrown away in the exhaust. It is a fundamental principle of heat engines that the efficiency depends upon the initial and final temperature of the charge is raised the efficiency is lowered. A higher exhaust pressure means a higher final temperature.

If the fuel situation becomes sufficiently acute we may even see engines built with sub-normal induction so as to gain the advantage of expansion practically down to atmospheric pressure. This could be done by closing the inlet valves before the end of the inlet stroke. The compression space would, of course, have to be reduced so as to obtain full compression with a partial charge, as the compression has a strong influence on the efficiency. In a conventional four stroke engine the exhaust pressure under full load is about 50 lb. per square inch gage, and by farther expanding the gas considerable additional energy can be recovered. But this end is attained at the expense of some loss in the maximum output from an engine of given size.—*Automotive Industries.*

---

COMPLAINT is general from all sections of the country that the tractor trade has been lagging. This is admittedly true as respects a majority of the machines offered for sale. Yet it is by no means universally true.

Tractors of certain makes are being sold in certain sections of the country in considerable, if not entirely satisfactory, numbers. Nor does this appear to be because the tractor itself is so attractive, nor to be the attitude of the farmers particularly favorable. Rather trade seems to come to these tractors because the selling organization is up on its toes and because the individual dealers are onto their jobs.

The observer who sees these things personally must conclude that it is efficient sales organization, careful and considerate investigation of local needs, intelligent meeting of local conditions and the assurance of ultimate service that is putting the tractor across. Where these things exist, tractors are being sold in the face of a situation which has slowed up the trade in general. The moral seems to be that if a sales organization of the right kind is secured tractors will sell.—*Motor Age.*

NOW that the motor truck manufacturers are getting back into their normal stride, we shall probably see, in the near future, a great many refinements in motor truck design that will tend to promote the life of the truck and make for increased economy of operation. Although last year's truck shows did not reveal many new things, the shows next winter will, undoubtedly, reveal some interesting changes.

It is a well known fact that the frequent draining of the crankcase oil is neglected—more so on trucks than on passenger cars. The reason for this is, that in the majority of trucks, the draining of the crankcase oil involves an undue amount of labor. The average operator is not inclined to crawl underneath the truck to unloosen the crankcase oil plug, for with him it is a case of "out of sight, out of mind." Of course, when trucks are given periodical attention this matter is taken care of, but the individual operator is apt to pay very little attention to this condition. There is no reason why the draining of the crankcase should not be taken care of by an arrangement workable from under the hood. A great many engine troubles could be eliminated if the crankcase oil was changed frequently. If the draining job could be accomplished with less labor it would materially help towards keeping truck engines in better working condition.—*The Commercial Car Journal.*

---

THERE is one thing that can always be associated with the motor car service station giving good service to its customers, and that is cleanliness. A careful survey of any good service stations will bear this out. Cleanliness does not only mean that the place is clean from top to bottom but that the cars are neatly stored and no tools or equipment lying about to interfere with keeping the floor clean.

One service station recently visited requires its men in the repair shop to change their uniforms twice a week, on Monday and Thursday. These suits are of a white material and go a long way toward making the place inviting to the car owners. Men clad in clean uniforms also keep tools and equipment clean as a rule, and therefore a highly polished car or beautiful upholstery is not so frequently besmeared with grease or oil from greasy tools carelessly handled.

Another garage repair shop paints the posts of its establishment every Saturday night, which gives them a chance to dry over Sunday and present a neat appearance on Monday morning. In fact, the slogan of this concern to its men is, "Keep clean and your work will naturally follow the same chanels."—*Motor Age.*

---

TOO many dealers are showing a tendency to shirk service on tractors. Many of them claim the discount doesn't jutify any service efforts on their part. This may be true in some instances, but for the good of the industry and the sake of future business, the dealer who is not willing to give service should give up his agency.

Manufacturers, distributors and dealers should demand that the dealers unwilling to render service should quit the business. This does not necessarily mean that the dealer should give free service to the point of eating up profits. It means sufficient intelligent service given at the time of delivery, followed by an organization sufficient of rendering service necessary to keep tractors in operation, and render it promptly, and at as low a price as possible commensurate with a reasonable profit.—*Chilton Tractor Journal.*

THE truck manufacturer's almost universal custom of selling a chassis with a seat or cab only, has led the dealer, unknowingly, into the belief that all he can sell is the chassis. This is not the case. There is money for the dealer in the handling of suitable, standard truck bodies with their chassis.

There are more and more manufacturers turning out lines of standard truck bodies which dealers can handle just the same as chassis.

There is no question but that it is an advantage to the dealer to be able to sell a complete unit to his customer. True, there is a demand for bodies for special work, and even some of these are now being standardized. The truck dealer who has, in addition to the chassis, a good line of standard bodies, which he can apply at once without delay and without forcing his customer to go elsewhere to complete the vehicle, is going to sell more readily and turn his stock over more quickly than the one who does not have bodies to go on his machines.—*The Commercial Car Journal.*

---

SELLING tractors, notwithstanding their great importance and numerous advantages, is hard enough without creating additional sales resistance. Yet this is just what is being done in innumerable cases. There was a time in the earlier days of the industry when the more or less gullible farmers would believe most anything regarding tractors. It was easy to oversell them. It still is in some instances. But as a general rule the same arguments that used to oversell the machines now act as boomerangs and create needless sales opposition. The salesman who says his tractor will pull four pows in any kind of soil when three is its limit, and the one who tells the farmer he can sell his four or six teams just as soon as the tractor gets in sight of his place, are fast becoming obsolete, because the farmer knows better. The salesman prejudices his own case.—*Chilton Tractor Journal.*

---

A GREAT many motor transportation companies doing overland hauling, especially between some of the large eastern cities, will either have to mend their ways or go out of business. Incidentally, quite a number of such companies have failed within the past few months, not because business in motor truck hauling slackened temporarily, but mainly on account of price cutting. Although the return load idea is blamed partly for this, the real reason is that too many concerns are trying to do business over the same route, with the result that there is not enough business to keep all of them going. Some of the smaller concerns started to cut rates, thinking that this would get them the business. It did, for a while. Then the larger companies began to cut prices, with the result that now some of these companies are attempting to haul at rates which are positively too low, considering the big overhead they carry. Probably this condition will be the means of quickly stabilizing the overland hauling business, for the simple reason that the concerns persisting in price-cutting will not survive.

It would seem that, under these conditions, it would be well for these companies to get together and agree on a price which will produce a fair profit. —*The Commercial Car Journal.*

# The keystone proves the superiority of WOOD wheel construction

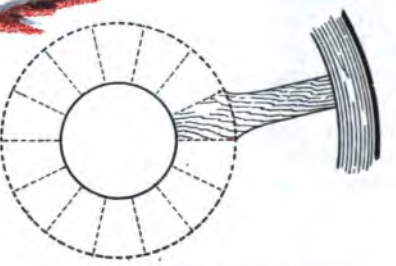
The keystone bears the weight of the arch by distributing that weight throughout the full arch itself. So is each spoke of the WOOD Wheel a "keystone"—receiving the weight of strain or shock and distributing that weight throughout the "full arch" of the wheel.

Other wheel types cannot absorb shock. They *transmit* it undiminished—to exert its full damaging weight upon the truck and its easily affected mechanical parts.

The ability of wood to absorb shock makes WOOD Wheels less costly than any other type of wheel. Tires on a WOOD Wheel give far longer service. The mechanism of a WOOD Wheel truck is completely protected against the ruinous racking and jarring of road shocks. And never is the safety of WOOD Wheels threatened by hidden yet fatal flaws—such as the crystallization of metal, for instance.

WOOD Wheels are safe and saving—one of the reasons why good trucks everywhere are carried on WOOD Wheels.

AUTOMOTIVE WOOD WHEEL
MANUFACTURERS' ASSOCIATION
105 West Monroe Street Chicago, Ill.



Note how the WOOD Wheel is constructed on the principle of the keystone—and how the spokes form a nearly solid unit Shocks, therefore, are borne equally by all of the "keystone spokes"—and evenly distributed over the entire wheel.

# Yours is a Prosperous Territory

Bethlehem prosperity is country-wide. There are prospective Bethlehem owners in your territory—men who are "half sold"—waiting for you to show them the big, husky, enduring Bethlehem and take their order.

Ask us why the Bethlehem distributors' proposition is the best for you to consider. The Bethlehem Dealer Plan may open up another prosperous, growing business.

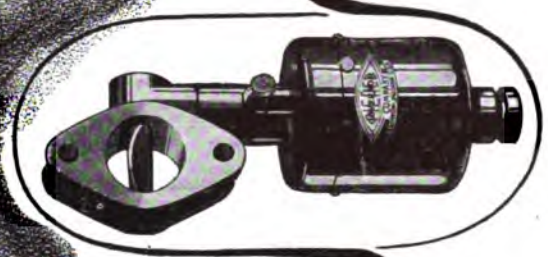
# What the Balance Wheel is to the Watch
# The Pierce Governor
# Is to the Motor Truck



TRUCK efficiency is not measured by horse power. It is measured by the truck's capacity for uninterrupted and economical performance. Any factor responsible for delays, accidents, or excessive upkeep cost defeats the very purpose for which the truck was purchased.

The Pierce Governor automatically provides a more perfect control of the truck speed than can ever be attained by the most careful and conscientious driver. As a result, the life of the truck is increased several years and the upkeep cost reduced fully one-half. That's why Pierce Governors have been made standard equipment on ninety-one of the best makes of motor trucks.

Look for a Pierce Governor on the truck you buy. It's a guarantee of efficient and economical service.

**You Can Judge Pierce Governors by the Manufacturers Who Use Them**

Here are a few of the ninety-one makes of trucks on which Pierce Governors are standard equipment—Selden, Maccar, Gramm-Bernstein, Diamond T, Indiana, Oneida, Velie, Paige, Signal, Gary, Master, Armleder, Dart, United States, Grant, Patriot, Superior, Nelson-Lemoon, Stewart, Kissel, Wilson, Kleiber, Commerce, F. W. D., Atterbury, Wilcox, Koehler, Larrabee-Deyo, Moreland, Giant.

THE PIERCE GOVERNOR COMPANY
"WORLD'S LARGEST GOVERNOR BUILDERS"

THE building of a motor truck designed in its entirety to uphold the reputation of its makers in the hardest service a commercial vehicle can be called upon to perform is a worthy challenge to any manufacturer.

Ten years' experience had given us the proper background, a study of the best commercial vehicles in use and a vivid comprehension of the requirements furnished our designers and engineers the material to work with.

The first step in the solution of any problem is to know that there is a problem, then to find out what the problem is. From our constant contact with truck users we are fully aware that the problem to be solved was how to design and build a motor truck strictly commercial in its ability to yield long service, strictly commercial in its dependability, and strictly commercial from the standpoint of simplicity and accessability; moreover, such a motor truck construction should necessarily feature positive lubrication to every working part, the power plant must have efficient cooling and the development of ample power at moderate speed with the use of low-grade fuel.

The policy of the **MARSHALL** Manufacturing Company is not to do things just to fit the ideas of the engineers, office force and the president of the company, but to think with the truck dealers, and truck drivers, who come daily in contact with the little troubles. We all must act together, think together. Toward this end we must have some common means of intercourse whereby we can have an exchange of ideas and opinions. We like to meet real truck people who can discuss our grievances and problems.

In the **MARSHALL** vehicle you will find every economy, greater strength, longer life and energy than most of the trucks of today. It is our aim to build every **MARSHALL** vehicle to please—built right to stay right.

***DEALERS:—***

**If your town or city has no MARSHALL dealer, wire for our Co-operative Selling Policy**

# TRADE GOSSIP

E. A. White has resigned as head of the division of agricultural engineering at the University of Illinois to become research engineer for the Holt Manufacturing Co., Peoria.

B. L. Combs has been placed in charge of the experimental laboratory of the Oakes Co., Indianapolis. Combs comes to the Oakes Co. after nearly two years' service as an officer in the Signal Corps, A. E. F., and for two years previous to entering the army was assistant instructor in physics at the University of Wisconsin.

F. George Walker is in charge of the newly opened New York office of Fuller & Sons Mfg. Co., automobile parts builders.

J. Murray Page, until recently manager of the Chicago branch of the Locomobile Co. of America, has been appointed western district sales manager of the company. He will continue to make his headquarters in Chicago. C. B. Amorous, formerly director of Locomobile sales, succeeds Mr. Page as manager of the Chicago branch.

B. F. Kelly has assumed charge of the sale of Weidely Bulldog motors. Kelly for a number of years was district sales representative for the National Acme Co. and more recently became a partner in the Bernard E. Griffey Motor Supply Co., Indianapolis, in which firm he retains an interest. The Weidely Motors Co. product is sold largely to the tractor trade.

Lucious French, advertising manager of the National Motor Car & Vehicle Corp., has resigned to become secretary of the Western Oil Refining Co., Indianapolis. Mr. French was the first advertising manager of the Cole Motor Car Co. ten years ago and held a similar position for the past five years with the National company.

Charles G. Guild has been named successor to Clayton O. Griffin as secretary and service manager of the Wayne Oil Tank & Pump Co. Guild comes from the Burlington Wheel Co., Burlington, Iowa, where he was manager.

George H. Miller, superintendent of the milling division of the Reo Motor Car Co., has resigned and goes with the Holt Manufacturing Co., Peoria, Ill., as general superintendent. Miller joined the Reo organization in 1910.

R. M. Stetson, formerly with the Packard and Maxwell companies as Detroit representative, has been appointed Detroit representative of the Xardell Brothers Co., Utica, N. Y., builder of gasoline tanks for automobiles.

George D. Bailey, formerly with the Brown-Lipe Gear Co., Syracuse, N. Y., has been appointed sales manager of the Hinkley Motors Corp. He will take up his new duties Aug. 1.

Ralph D. Webster, general sales manager of the Wire Wheel Corp., Buffalo, has resigned and has joined the forces of the Fred E. Castle Co., distributer for the United States of the Hayes Wheel Company.

Fred W. Jones, formerly with the advertising department of the International Harvester Co., has been made advertising manager for the Holt Mfg. Co., Peoria.

Mark Havenhill has been appointed regional agricultural director for the southwestern territory, with headquarters at Oklahoma City, for the Cleveland Tractor Co. He was formerly professor of farm engineering at the University of Kentucky and is a graduate of, and formerly instructor at, the University of Iowa at Ames.

Col. Fred Glover has been made assistant general manager of the Timken-Detroit Axle Co. He was formerly vice-president of the Emerson-Brantingham Co. of Minneapolis.

R. C. Duffus will be in charge of a sub-branch of the Detroit branch of the Packard Motor Car Co. in Kalamazoo, for Kalamazoo and Calhoun counties. A building will be erected at 523-527 West Main Street.

Earl W. Gookin has resigned as vice-president of the M. V. Kelly Co., advertisting agent of New York and Toledo, and will go to Detroit to represent the Macbeth-Evans Glass Co., manufacturer of lenses.

The Mason Tire & Rubber Co. has opened a branch at 450 Jackson Street, Milwaukee. E. E. Gessert, formerly with the Racine Auto Tire Co., has been appointed branch manager.

The San Francisco branch office of Walden-Worcester, Inc., has moved to larger quarters at 487-91 Monadnock Building. The branch manager is L. A. Raasch, with whom is associated R. K. Flanagan.

Construction has been begun on the new buildings for the Perfect Rubber Co., Mansfield, Ohio. John H. Link, formerly chief chemist for the Faultless Rubber Co., of Ashland, will be associated with the new concern.

The Milburn Wagon Co. has added 40,000 sq. ft of floor space to its present factories.

# MANUFACTURERS' NOTES

The Bean Spray Pump Co., San Jose, Cal., manufacturing two Track Pull tractors, one for field and one for orchard work, will introduce its product in the middle west this season.

The Stearns Motor Manufacturing Co., Ludington, Mich., has succeeded the Gile Tractor & Engine Co. The company is bringing out a tractor of 3 and 4-plow capacity of the frameless type, with a rating of 36 hp. on the belt. Another new product will be a heavy duty engine, known as model "AU," designed especially for tractors.

The Interstate Tractor Co. has been purchased by L. C. Stearns, Minot, N. D., and the business will be revived under the name of the Plowman Tractor Co. It is understood the old Plowman tractor, made by the original company, will be redesigned and brought up to date, without, however, fundamentally changing the characteristic features.

The National Wire Wheel Works, Inc., has moved from its factory at Geneva, N. Y., to its new plant at Hagerstown, Md. New quarters afford facilities for the manufacture of 1,000,000 wheels a year. General sales offices of the company have been transferred from Geneva, N. Y., to the Book Building, Detroit.

The J. I. Case Threshing Machine Co., of Racine, Wis., has purchased the property of the defunct Mutual Brewery Co., St. Louis., at the southeast corner of Forest Park Boulevard and Boyle Avenue, 400 by 192 ft. 8 in.

A new building at Akron, Ohio, which will be the largest of the 84 in use by the B. F. Goodrich Co., will soon be under construction. It will be 170 by 300 ft., eight stories high. The warehouse will be built next to railroad siding and will have an unloading platform and seven special elevators.

The F. W. D. Auto Co. has opened a branch office, salesroom and service station at 452 Jackson Street, Milwaukee, under the management of G. B. Megran.

The Establishments Bergougnan, one of the world's largest tire producers, has announced the opening of an American factory at Trenton, N. J., where pneumatic tires are already in production and plans are in the making for turning out solid tires. The Bergougnan company has its main plant at Clermont-Ferrand, France.

The Yuba Manufacturing Co., Marysville, Cal., maker of the Yuba Ball Tread tractor, will have distribution in the middle west.

The Economy Carbureter Co., Milwaukee, has been organized with a capital stock of $50,000 to manufacture a carbureter designed by Eugene Drahonovsky.

The general offices and sales department of the Fulton Motor Truck Co. have been moved from the factory at Farmingdale, L. I., to 1710 Broadway. F. W. Melhuish, president of the company, has resigned to become chairman of the board of directors.

A building 60 by 200 ft. is being erected for the Van Auken Machine Co., Pontiac, Mich., to be completed within 30 days.

The Reliable Tractor & Engine Co., Portsmouth, Ohio, formerly the Reliable Engine Co., has been incorporated for $2,000,000 by C. Heer, F. E. Adams, George W. Platt, F. N. Tynes and M. Heer.

The Fisher Body Corp., Detroit, has purchased 3¼ acres adjoining its Fort Street plant to provide space for future expansion. The price paid was $18,000 an acre.

The Jackson Cushion Spring Co., Jackson, Mich., is preparing to double its plant capacity and production. Two plants of the Borden Condensed Milk Co. were recently purchased, and are being converted into spring factories. Five hundred men are now at work, but this force will be increased to 1,000.

The Stanwood Rubber Co., recently incorporated, will be in production of tires and tubes by September. Its steel and concrete plant has a floor space of 68,000 sq. ft. and occupies a 7-acre site. Equipment is being installed.

Ownership of 57 per cent of the stock and control of the Peerless Truck & Motor Corp. returned to Cleveland when new directors and officers were elected. Cleveland now has ten directors and New York three.

The Nordyke & Marmon Co.'s expansion project by which more than 300,000 sq. ft. of floor space will be added to the plant at Indianapolis and the production doubled, is being financed by a 1 to 10 year serial note issue for $2,500,000.

Digitized by Google

The Keystone Tire & Rubber Co., New York, has declared a 15 per cent dividend, payable Sept. 15. Shareholders of record of July 21 will be permitted to subscribe one share of new stock for every three shares now held at $40 each.

---

The Cole Storage Battery Co., Chicago, Ill., has completed improvements to a new addition to its plant which gives 14,000 square feet of additional floor space. Additional ground has also been purchased on which the company will build in the near future.

---

Plans for a plant at Indianapolis to cost $100,000 are being drawn for the Van Briggle Motor Device Co. The new structure will be 108 by 208 ft., and will be located at 429 North Capitol Street.

---

The capital stock of the Triangle Motor Truck Co., St. Johns, Mich., has been increased from $100,000 to $200,000. An enlargement of the company's factory has been reported.

---

The Auto Parts Corp. of America, Chicago, Ill., has changed its name to the Continental Auto Supply Co.

---

The Rubber Products Co., Barberton, Ohio, announces that it is in the process of developing a manufacturing program which will double its output within 30 to 60 days.

---

The United Brass & Aluminum Mfg. Co., Port Huran, is erecting a gray iron foundry addition. The proposed foundry will be 72 by 100 ft. and will be ready within 90 days.

---

The Ashland Tire & Rubber Co., of Ashland, Ohio, with temporary offices in Cleveland, announce that plans have been prepared for the erection of a modern tire plant in Ashland, costing approximately $150,000.

---

Ground soon will be broken for a $26,000,000 rubber and cotton plant for the Goodyear Tire & Rubber plant at Ascot Park, Cal. A plot covering 550 acres will be developed with tire and cotton plants. The plant, which is to employ about 3,500 men, is to be completed this year.

---

The Sayers & Scovill Co., Cincinnati, Ohio, manufacturers of the Sayers Six, report that they are making plans to increase production to keep up with increased sales. Emil E. Hess, general manager, who visited Sayers Six distributors in St. Louis, Kansas City, and other Western points recently reports dealers everywhere have a good business and that there is a shortage of all makes of cars.

---

Increased capitalization and enlarged plant space have been announced by the Root & Van Dervoort Engineering Co., East Moline, Ill. The stock has been increased from $1,346,200 to $7,500,000 and the purchase of 61 acres of land, adjoining the present plant, for the erection of new buildings, has been completed.

---

The Electrical Sales Engineers, Inc., have been succeeded by Paul W. Koch & Co., 19 South Wells St., Chicago, Ill.

### John N. Willys Prepares to Market New Light and Power Plant

A modern electric lighting and power plant for farms, rural schools, and churches, suburban homes, etc., is to be manufactured by one of the John N. Willys companies, the Electric Auto-Lite Corp. of Toledo, Ohio.

The new system will be known as Willys Light. It will be marketed by the Willys Light Division of the Electric Auto-Light Corp. through distributors and dealers. The formation of the sales organization is now underway. It will extend throughout the United States and eventually throughout the world.

The new system is operated by a Willys-Knight sleeve-valve engine.

The complete plant consists of a Willys-Knight engine, a directly connected generator, a simple control box and a storage battery. The engine burns kerosene at approximately one-half the cost of gasoline, it is stated. It is air-cooled, self-cranking, self-running, and self-stopping. The control is semi-automatic.

The generator is shunt wound for 32 volts. It delivers 750 watts. The armature of the generator, the engine fly wheel and crank shaft are constructed in practically one piece, thus eliminating separate generator bearings and reducing friction.

The battery consists of 16 cells with nine plates to the cell. These are enclosed in sealed glass jars. They have a capacity of 160 ampere hours.

---

### Rube E. Allmart Killed in Railroad Accident

Rube E. Allmart, eastern district sales manager of the Wescott Motor Car Co., was killed in the recent New York Central Railroad wreck at Dunkirk, N. Y.

Mr. Allmart was thirty-five years old, single and his permanent home was in Detroit. He had had many years of automobile experience in a wholesale way and enjoyed a large circle of friends in the industry. He has been located in the eastern territory for several years.

---

### Peerless Wins Yosemite Valley Economy Run

A Peerless eight won the recent Camp Curry-Yosemite Valley economy run averaging 17 miles to the gallon of gasoline over 374½ miles of mountainous trail and consuming but one and one-half pints of oil or an average of 1,994 miles to the gallon. The car which made the run was a standard seven-passenger model. It weighed 4,900 pounds and carried five passengers together with a quantity of luggage.

---

### New Black & Decker Catalog

The Black & Decker Mfg. Co., Baltimore, Md., has brought out a new catalog describing in detail its portable electric tools, air compressors and special machinery. The book is handsomely illustrated.

---

### Jordan Distributes Premiums

The Jordan Motor Car Co. has distributed $25,000 to its employees as premiums, 15 per cent of previous year's wages, being given to each one in the company's service two years or more, 12 per cent to those there from one to two years, and 10 per cent to those in the company's employ less than a year.

# The SPARK That NEVER FAILS

For *Dependability*—NATIONAL BIG POWER Spark Plugs cannot be equalled.

When life depends upon the Spark Plugs—in Air, Land or Water service—the ONE INCH FIRING SURFACE of NATIONAL Spark Plugs insures SAFETY.

It gives a fiery *shower* of Hot, Fat, resolute sparks—every time—that ignite every charge of every cylinder—without fail—steady, sure, dependable.

National

## BIG POWER SPARK PLUGS

are equipped with big "Spark Power" oversize electrodes of extra heavy wire. They give 10 hot, fat, crackling sparks instead of only one—give MORE POWER with LESS FUEL. Heat-proof, oil-proof, trouble-proof—practically unbreakable—cannot warp out of adjustment. Sold by all reliable dealers. Booklet mailed on request.

*PRICES: Standard sizes, $1 each; Tractor Special, $2 each.*

***DEALERS—Write for Catalog of Sizes, Prices, etc.***

# Here's Proof of "The Universal Service"

ALASKA or Atlanta—no matter where you do business—you'll find one of the 40 Prest-O-Lite Plants and Warehouses your best and handiest source of acetylene supply.

Wherever repairs are needed, there you will find good welders using and depending upon

**Prest-O-Lite**

DISSOLVED ACETYLENE

**The Universal Gas With The Universal Service**

Prest-O-Lite Service goes wherever you can go; does any kind of a welding or cutting job for the least time and money cost.

*Write for the Service Plan, It's Interesting*

THE PREST-O-LITE COMPANY, Inc.
*General Offices*
30 East 42nd Street, New York

Kohl Building, San Francisco

*In Canada*

### Security Theft-Signal

The Security automobile "theft-signal" is an extremely strong red enameled malleable iron shackle designed to be locked around the tire and rim on the right front wheel of the automobile where it is always in plain sight.

It is made with a large pointed projection at the top, which extends beyond the tire so that if necessity demands the car can be moved, but any attempt

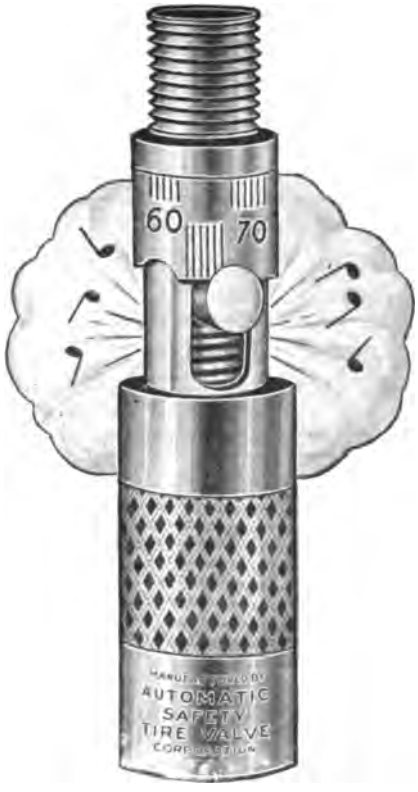
to run or tow the car will result in a terrific thumping which will signal to everyone in the vicinity that the car is being stolen.

The device bears a brass plate certifying that the manufacturer will pay $100 reward for the arrest and conviction of anyone operating a car so equipped, or tampering with the device while it is protecting a car. It is made in sizes to fit tires from 3 to 5 in.

---

### Automatic Safety Tire Valve

A large proportion of all tire troubles are directly due to improper inflation. Realizing this the Automatic Safety Tire Valve Corp., Long Island City and 1765



Broadway, New York City, has developed and placed on the market the Automatic Safety Tire Valve. The device is screwed on the tire valve, after which the collar is set to the pressure desired. When the tire is inflated and the desired pressure reached, the air will exhaust, giving warning, and no more air can be put in the tire.

### Shanklin's Automobile Lock

Shanklin's automobile lock, manufactured by the Shanklin Mfg. Co., Springfield, Ill., is designed to lock the steering wheel so it cannot be turned. It can be

installed in about 15 minutes and will fit all cars having 1⅜-in. and 1¾-in. steering columns, with controlling levers above the steering wheel. It is strongly made of rigid materials, and is nickel plated.

---

### Mayo No. 2 Portable Pump

The Mayo No. 2 portable electric pump is intended especially for garage and service station use. The outfit is manufactured by the Mayo-Skinner Mfg. Co., Chicago, Ill., and consists of a Mayor No. 10 compressor driven by a one-quarter horsepower electric motor through a silent chain.

The pump rests on a steel tank 3 by 5 inches,

fitted with a combination pet-cock and electr[illegible] switch attachment, providing the outfit with a ne[illegible] tral air chamber between the starting motor and tire already under pressure. This permits the pu[illegible] and motor to obtain full speed before operati[illegible] against tire pressure resistance and disposes of a[illegible] liability of burning out the motor.

It is stated that by actual test the pump infla[illegible] a 35 by 4½-inch tire from flat to 90 pounds press[illegible] in 3 minutes 20 seconds, and pumping against pr[illegible] sure continuously consumes only ⅓ of a kilowatt hour per hour, or 3 cents in value.

### Hill Spark Plug

With the poor grades of gasoline now on the market carbon forms more rapidly in the cylinders of the engine, with the result that spark plugs are more apt to become fouled than formerly. The Hill 3-A spark plug, manufactured by the Hill Insulating & Mfg. Co., 511 West 42nd Street, New York City, has been designed to perform satisfactorily under these abnormal conditions. The shell is of one-piece steel construction carefully machined and is furnished with a knurl and cooling flanger to prevent pre-ignition. It is copper-plated and oxidized to keep rust away. The insulating material is mica, split thin and formed into a taper tube 3/32-in. thick, which is forced into the shell by and with the electrode under a pressure of 3,000 lbs. The electrode cap is stamped from a thin sheet of special alloy. The conical form where the spark takes place is claimed to insure a hot energizing spark. The porcelain top on the plug serves as a base for the terminal connections but has no electrical function.

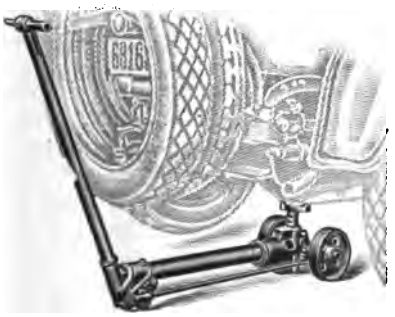
### Luxar Top Material

Realizing the demand for a dependable top and curtain material of the rubber type selling at a price permitting its all around use for new and repair work, the Du Pon Fabrikoid Co., Wilmington, Del., has placed such a material on the market under the name of Luxar.

The material is made in both single texture and double texture for tops and in a comparable single texture for curtains. In every type the fabric base is of sufficient weight and strength and the coating of ample thickness and quality to render Luxar proof against all weathers, it is stated.

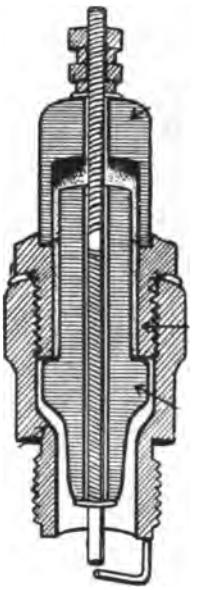
### Weaver New-Way Jack

The Weaver New-Way Jack is offered by the Weaver Mfg. Co., Springfield, Ill., as a handy means of shifting cars or trucks about quickly. Owing to the fact the overall length of the jack is only 40 inches, it is easily manipulated in cramped quarters. An advantageous and distinguishing feature of the jack is the fact that the wheels pivot and are guided and controlled by the handle. The leverage is such that one man can lift 5,000 lb. with ease, it is stated.



### Tipco Spark Plug

Special features are incorporated in the Tipco spark plug, manufactured by the Ignition Plug Co., Louis, ville, Ky. Two porcelain insulators are used, one external and one internal. The external insulating cap protects the main insulator from the outside air, saving it from extreme temperature changes, it is claimed. The internal insulator is cemented into a collar nut. This collar nut has an external thread and screws into the main shell. A metal to metal joint between the collar nut and shell with a washer in between ensures a gas-tight fit. The advantage of this construction is that there is no donger of cracking the porcelain when replacing it after cleaning as screwing the nut down hard throws no strain on it.



### Johnson's Valve Grinding Compound

Johnson's valve grinding compound is one of the latest offerings of S. C. Johnson & Son, Racine, Wis. It is a uniform mixture for removing pits and foreign substance from the valves and a special feature claimed for it is that it will not gum and stop cutting, so that it is not necessary to lift the value up for wiping and another application as is usually the case. As it can be left on the valve throughout the grinding operation, considerable time is saved. The compound may also be used for lapping cylinders and general polishing. It is furnished in two-ounce boxes containing both course for roughing and fine for finishing.

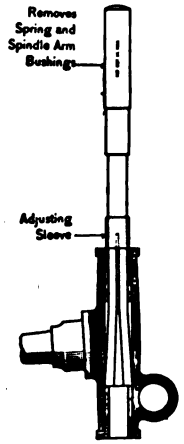
### Continental Engine Stand

,The Continental engine stand can be securely locked at any desired position or angle, and changed and locked as desired.

This permits the mechanic to place the engine in the position where he can obtain the best light and reach the part he is working on with the greatest ease. It is a universal stand and will handle all types of engines. The stand is made by the Continental Auto Parts Co., Kingstown, Ind.

### Mosco Bushing Remover

The Mosco Jiffy bushing remover, manufactured by the Motor Specialties Co., Waltham, Mass., is built to remove bushings from steering knuckles, spindle arms and springs in the shortest possible time. It is fitted with a sleeve which keeps the split end of the tool compressed until properly located, when it is automatically released. The tool is made of steel, case hardened, and will fit the Ford, Dodge, Overland, Chevrolet, Maxwell, Saxon, Dort and all cars and trucks using ½-in. spindle bolts.



The accompanying illustration shows how the device is used in removing a bushing from the steering knuckle.

### Lee Knight Lens

The Lee Knight headlight lens is being placed on the market by the Lee Knight Lens Co., Rochester, N. Y. The lens is of the prism type and throws a broad wide light below the 42-inch dead line. When applying the lens the corrugated or prism surface goes on the inside and the mirrors on the outside. The mirrors stand straight up and down when locked in the headlight. The Sampson grip edge built in the lens holds it securely in place in the trame, thus keeping it from turning.

Harold C. Bement has been placed in charge of the electric furnaces at the new plant of the Onondaga Steel Co., Inc., Eastwood, N. Y. He was formerly melter foreman at the government arsenal at Watertown, Mass.

### Fords Buy Minority Stock

Exclusive ownership of the Ford automobile interests will pass into the hands of Henry Ford, his son, Edsel, and James Couzens, mayor of Detroit, and one of the pioneers in the Ford development, through a $75,000,000 transaction consummated in Detroit recently for purchase of minority stock holdings.

Edsel B. Ford, president of the Ford Motor Co., is purchaser of all of the minority stock in the company, with the exception of 2,180 shares held by Couzens.

Details of the sale, financed by a syndicate loan, were made public by Frank L. Klingensmith, vice-president and treasurer. Edsel Ford, previous to the sale, held 300 shares of Ford stock. There were 8,300 shares held by outside interests. Henry Ford owned 11,000 shares. Approximately $12,500 a share was paid for the minority holdings, as follows:

| | | |
|---|---|---|
| Horace H. Rackham | 1,000 shares, | $12,500,000 |
| John Dodge | 1,000 shares, | 12,500,000 |
| Horace Dodge | 1,000 shares, | 12,500,000 |
| John Anderson | 1,000 shares, | 12,500,000 |
| David Grey | 525 shares, | 6,562,500 |
| Paul Grey | 525 shares, | 6,562,500 |
| Phillip Grey | 525 shares, | 6,562,500 |
| Alice Kales | 525 shares, | 6,562,500 |
| Mrs. A. P. Hauss | 20 shares, | 250,000 |

Added to the price paid for the stock it is estimated that close to $17,000,000 will go to the government in excess profit taxes.

Acquisition of the minority interest stock is for the purpose of reorganizing the Ford Motor Co., although there is to be no change in the personnel of the officers and department heads.

Through the reorganization plan it is the ultimate desire to make the new company a co-operative one. That is, the employees of the firm would technicaly succeed the minority stockholders of the old company, as stockholders in the new corporation.

### Acme Motor Truck Employees Hold Picnic

The second annual picnic of the employees of the Acme Motor Truck Co., Cadillac, Mich., was held recently on the banks of Lake Mitchell, near Cadillac.

Families of the hundreds of employees gathered at a given point and were conveyed to the picnic grounds in Acme trucks. An old-fashioned, un-Hooverized picnic dinner was served on the grounds. Then came a full afternoon of water sports of many kinds, taken part in by Acme employees and executives, the winners of the various events being rewarded with cash prizes, candy, cigars and many other worth-while prizes, all provided by the company.

A feature of the day was the impromptu "police court," presided over by a judge, prosecuting attorney and the usual court room hangers. Acme employees by the score were arrested and brought before "His Honor," where fines were laid on the offenders in proportion to the seriousness of the offense, the money so raised being turned over to the manager of the Acme baseball team to defray expenses incidental to a ball team. This feature of the day provided much enjoyment and produced a substantial sum of money for the ball team.

Martin K. Whalen has joined the force of the International India Rubber Co., South Bend, Ind., as its southern representative. He has been acting as special representative for the Century Plainfield Tire Co.

### Training a Boon to Many Concerns

The practical value of industrial education in manufacturing plants finds abundant evidence in a bulletin entitled, "How Training Departments Have Bettered Production," which has just been issued by the U. S. Training Service. This publication contains a symposium of experiences in seventeen American factory training departments, together with valuable suggestions as to how to carry on instruction. A variety of industries are represented among the concerns listed. In each case an attempt has been made to indicate just the manner in which training has been applied, the approximate length of training, the benefits derived, the cost, etc. Among the concerns whose experience is recorded are a manufacturer of electric machines, adding machine makers, and photographic supply company, a large tool works, an automobile motor builder, a large electric machine plant, a maker of gear cutting machinery, manufacturer of farm implements, and gun-making plant.

The pamphlet shows that each concern employed practical production men, possessing ability as instructors, to study the various operations performed in the plant and determine just how each one should be taught. In most cases a separate room was set aside for the training department in which representative machines were installed. On these machines selected workers are trained.

Reports show that on the average the learning time is approximately one-half that ordinarily required for "breaking in" an employee by the old haphazard method. In some cases the training work here discussed was instituted during the war where the emergency required that special attention be given to training new employees. In other plants, however, training was adapted to more normal times and was maintained to upgrade old employees, as well as to "break in" new employees.

The Training Service considers that under normal conditions helping old employees is the chief task for a training department. The concluding pages of the pamphlet are devoted to a plan for organizing a training department and indicate in detail what should be taught and how to teach it. This bulletin is one of a series which has been published by the U. S. Training Service for free distribution. All requests should be addressed, U. S. Training Service, care of Department of Labor, Washington, D. C.

---

### Murray Sees Bright Future for Truck Business

Developments of the day all point to a splendid increase in the motor truck manufacturing business. Arthur T. Murray, president of the Bethlehem Motors Corp., is an optimist at all times when contemplating the future of the industry, but has never been more optimistic than at present. In discussing the future, Mr. Murray says:

"Spending a half-billion dollars in good roads within the coming year will benefit the manufacturer of commercial cars more than any other class of manufacturer in the automotive field. Spending a billion-and-one-quarter in road building within the next few years will bring this industry to a point hardly contemplated by even the most optimistic today. The latter amount is in sight of Federal aid, state aid and from other sources, and road work will go on uninterrupted now.

"The motor truck business has grown amazingly, of course, but its start has been small as compared to what the future has in store. With trunk lines completed criss-crossing America, and providing first-class highways from large city to large city, and with such 'trunks' crossing every state of the Union, there will be provided an opportunity for the development of a great national system of truck deliveries of merchandise.

---

### New Phase of Industrial Education Portrayde

An intimate glimpse of a new phase of industrial education possession far-reaching possibilities for American industry is contained in an illustrated bulletin recently issued by the U. S. Training Service of the Department of Labor, under the title, "Efficient Training in a Large Plant." The system of imparting trade knowledge and skill to industrial workers set forth in these pages, is in operation in an Eastern plant employing at times as many as 10,000 persons. This department has trained beginners so that they learn the right way of performing their task in about half the itme ordinarily required for "breaking in.". Today more than 350 plants have training departments similar in principle to this one.

To any person alive to the social problems so acute in these days, this form of practical education will be a source of much interest. The booklet recites the steps taken in training employees in this plant. The first is the giving of a lecture interpreting the spirit of the plant to the workers, explaining the purposes of the training courses, giving knowledge of safety regulations, etc. Following the address the employees are divided into groups of five or six each under an instructor, and assigned to the 80 machines, which constitute the equipment of the training department. The instructors are provided with mimeographed sheets which indicate in detail the steps to be taken in teaching the operation of the different machines. To train the workers requires a few days or weeks, according to the work being taught.

Of equal importance with the training of beginners is the upgrading of old employees that their work may be raised to standard or that they may be fitted for promotion.

This booklet is one of a series dealing with various phases of industrial training which will be sent free to any address. Requests should be sent to the U. S. Training Service of the Department of Labor, Washington, D. C.

Fred W. Thomas has opened an office in Cleveland, Ohio, as consulting engineer. He was formerly chief engineer of the Olympian Motors Co., Pontiac, Mich.

---

Capt. Wakeman Hackett, recently released after 20 months in service, has become associated with the Oshkosh Motor Truck Mfg. Co., Oshkosh Wis., as factory representative covering the Middle West.

---

H. H. Lotz, for many years with Lowe Bros. Co., has joined the sales force of the Hilo Varnish Corp. He will cover southern Ohio, with headquarters at Dayton.

---

William J. Lane, for six years purchasing agent of the Maxwell Motor Co., Detroit, has resigned and is now associated with the selling force of the Trumbull Steel Co., with offices in Detroit.

# THE ELECTRIC STORAGE BATTERY CO.

The Giant Battery Backed By 31 Years of Specialized Experience.

## The "Exide" Starting & Lighting Battery

"The Giant that Lives in a Box"

is the battery known as the "giant that lives in a box." It has earned this title by its mighty performances in providing real "punch and pep" to automobile starting and lighting all over the country. Ever since the first starting-crank was consigned to the tool box it has been giving motorists a power service that is **right.** From positive plate to case handles it is a quality product—one that you can be proud to sell—one that you can unqualifiedly recommend.

## THE ELECTRIC STORAGE BATTERY CO.

**The largest maker of storage batteries in the world.**

**1888 PHILADELPHIA, PA. 1919**

**New York Boston Chicago Pittsburgh Washington Minneapolis Denver Kansas City San Francisco Detroit St. Louis Rochester Cleveland Atlanta**

# Champion Dependable Spark Plugs

## Champion Dependability Has No Substitute

THE heavy demand for Champion *dependability* made and keeps Champion Spark Plug *production* the largest in the world.

Champion Spark Plugs have kept pace with spark plug requirements that are daily more exacting and varied.

The history of perfecting the internal combustion engine to its present high efficiency is paralleled by the remarkable record of Champion advancement in spark plug reliability, endurance and certainty of performance.

The greater resisting power of our famous number 3450 Insulator to temperature changes, shocks and vibration, together with our patented asbestos gasket construction, are a few of the reasons for Champion dependability.

The world-wide reputation of the Champion Spark Plug Company's engineering and experimental laboratories has long been depended upon by many manufacturers of gasoline motors for the solution of their spark plug problems.

There is a Champion Spark Plug specially designed for every type of engine. Make sure the name "Champion" is on the insulator as well as the world trade mark on the box.

Now is the time for dealers to make sure their stock of Champion Spark Plugs is complete. Go over *your* stock today.

# Vesta Dealerships Are Profitable
## Because Vesta Users Are Always Satisfied

"WORD-OF-MOUTH" advertising is the best publicity a dealer can have. Thousands of satisfied Vesta battery users constantly spread the message of Vesta quality and Vesta service to their friends.

This Vesta good-will is one of the big reasons why Vesta dealerships are so profitable.

Year after year the public approval of Vesta grows, insuring a steady and ever increasing volume of business.

Vesta dealers everywhere are associated to build up and strengthen Vesta good-will.

Each Vesta service station is equipped to give prompt and thorough service to motorists, no matter what make of battery they use.

Vesta batteries have four patented features which insure longer battery life. Users soon learn to know these features and ask for them. Only Vesta dealers can supply the demand.

There are still a few openings in our organization for dealers who are prepared to live up to the high standards of Vesta service and of Vesta batteries.

It will pay you to join the "Vesta family" now.

# Watch for the Announcement of the "CORD TIRE" Battery

*THE NEW*

PHILADELPHIA DIAMOND GRID BATTERY

**With the PHILCO Slotted Retainer**

These magazines will tell the story:

**Literary Digest**
**August 30th—Outside Back Cover**

**Literary Digest**
**- Automobile Trade Supplement**
**August 30th—Outside Back Cover**

**Saturday Evening Post**
**September 20th—Inside Back Cover**

**Collier's**
**October 18th—Facing First Page of Reading Matter**

AND what a story they will tell! A new battery, with a new feature—a battery that has outlasted and out-performed any battery we could buy or build. A battery that is to all other batteries what the cord tire is to fabric tires.

It will be guaranteed for two years.

It will be advertised. The announcement advertisements listed above are just the beginning of the big smashing campaign that is to follow—more than double the advertising we have ever done before.

The new battery will be easy to sell. In anticipation of the big demand we have increased our manufacturing facilities to care for a large number of new dealers.

***When there is such a thing as a "Cord Tire" Battery do you dare to sell nothing but fabrics?***

*Write for the "Cord Tire" Proposition to-day*

## Philadelphia Storage Battery Co.

# An Ideal Battery Charger for Alternating Current

The 6-amp., 75 volt Tungar Rectifier will charge any combination of 3, 4, 5, 6 up to 30 cells at 6 or 7 amperes or less from alternating current.

It is a practical device demonstrated by actual service. It equips the garage for efficient battery charging at a much lower cost than any other reliable device of similar capacity. The Tungar Rectifier allows a good profit on battery charging.

The Tungar fastens to the wall thus taking up no floor space. It uses alternating current at a cost of but six cents an hour for ten 3-cell batteries. It is self-starting, requiring no attendant.

Fool proof, trouble proof and simple to operate, the Tungar Rectifier charges all sizes of storage batteries up to thirty cells.

# UNIVERSAL

## THE HEART OF YOUR STARTING AND LIGHTING SYSTEM

**Garage owners, service station and supply men—in fact, everyone who owns an automobile, should investigate**

## UNIVERSAL BATTERIES

**The Heart of Any Good Automobile**

are of the highest type. There is a complete battery for every popular make of car, and a repair part for every standard make of battery, which insures you the advantage of having all replacement and repair parts delivered promptly.

## UNIVERSAL BATTERY SERVICE

means other things, too, besides the prompt, efficient delivery of superior batteries. It means that we can quickly supply as well all other parts — plates, terminals, connectors, separators, etc. It means a saving of time and money for you.

Get acquainted with this complete, comprehensive service. Write for our interesting catalog and price list. A post card will bring it to you.

**Universal Battery Company**

**3436 South La Salle St.**

**Chicago, Illinois**

**The Spectacular Spike Test**

Just take two ordinary 20-penny spikes and two pairs of pliers. With the pliers hold one spike to one terminal of the Mac-Lar Battery and the second spike to the other terminal.

*Now bring the ends of the spikes together forming a dead short circuit!*

Immediately there appears a red glow—and in a few seconds the spikes are a molten mass.

# Suppose Our Sales Manager Should Come to You With the Story of These Homely Spikes?

Suppose our Sales Manager should come to you with the simple but spectacular "Spike" Test—and demonstrate before your eyes how the big strong force of the Mac-Lar Battery literally melts husky 20-penny spikes—reducing the ends of the spikes to a molten mass?

Wouldn't you immediately see the Dollars and Cents sales possibilities of this remarkable battery—and put yourself in a position to cash in?

## Your Only Possible Question Answered by 18 Months Guaranty!

Will this big strong force be permanent?

That's the first and last question any of our big distributors have asked before signing up—it's the question you probably are asking yourself now.

The answer is—"The Mac-Lar Master Storage Battery is guaranteed in writing for 18 months."

Do you want the explanation?

It's the special patented process which has enabled us to build into the Mac-Lar three advantages never before combined in the same battery (1) Extremely hard plates which guarantee long life, (2) 25% extra capacity for the same plate area and a higher momentary discharge rate than any soft plate battery, and (3) unusual recharging efficiency.

## Four Standard Models Fit 99% of Cars— Low Price Brings You Big Volume Business

For replacement the Mac-Lar is made in four standard models—(two shapes in the 6-volt and two in the 12-volt)—and these four models fit 99% of all cars—replacing more than fifty-one combinations and shapes of other batteries.

Special universal terminals are furnished, making it easy for anyone to install the Mac-Lar on any car in a few minutes.

The low price of $25 on the 6-volt and $36 on the 12-volt, together with the indisputable "Spike" Test, opens up profit possibilities you have never had before—the Mac-Lar agency carries with it the big volume business of your territory.

Write or wire immediately for the complete Mac-Lar Agency Plan—a definite tangible proposition which shows just how you can start making big profits on the Mac-Lar Battery at once.

# A Personal Experience with Threaded Rubber Insulation

I have one of the original lot of Still Better Willards, put out in 1916 before any announcement had been made to the general public.

It was in February, 1919, that I discovered my battery had Threaded Rubber Insulation. The car has seen plenty of hard service. I drove it all through the hard winter of 1918—extreme cold and lots of dark days.

But I never had any battery trouble of any kind till one morning in February when I found the battery dead. The day before, the distributor was out of order and a friend of mine who was driving, punished the starter severely and exhausted the battery.

I went to the nearest Willard Service Station, got a rental battery, and had mine recharged. I was told what I didn't know—that I had Threaded Rubber Insulation in my Willard Battery.

I haven't had it recharged since, and it has the same old punch and pep today (June 1st). That's some record, I'll say.

A. JUDSON,
13740 Euclid Ave., Cleveland, Ohio.

The above is a fair sample of what Threaded Rubber Insulation means. If this battery had had wood insulation, it would long since have had to be reinsulated; for the owner frankly admitted he had never been any too regular about keeping it filled with water.

Of course, starvation, overheating and improperly regulated electrical equipment will injure even a Willard Battery with Threaded Rubber Insulation, and therefore it's impossible to guarantee any definite length of life. But under equal conditions Threaded Rubber Insulation greatly extends a battery's life and indefinitely postpones reinsulation.

Three years' experience on thousands of cars has established this fact beyond any question.

THIS is the battery referred to above, from a photograph taken three years and five months after it went into service. It was put back in the car and is still alive and kicking. Only once in its life was it recharged from an outside source.

# ist Price of Storage Batteries for Cars From 1912 to 1919

## REVISED MONTHLY

**O USE THIS TABLE.**—These prices are consumers prices of standard batteries, F.O.B. Home Office. Freight or express charges will have to be added. Weight of battery is given purpose. Look in Electrical Specifications Department for name and year and model of car: Find the serial number under the battery desired; look in this table for that serial and you will find the battery that will fit that car. Be sure and give the type number and order, or part number, in ordering. Do not pay any attention to serial number, as rested by us to enable you to find the right battery quickly. Prices here given are taken from the latest price lists we have been able to obtain from manufacturers, and will ditted to manufacturers each month for revision. This compilation is for the benefit of the trade. We have used every care to give the latest, authentic information, but we guarantee the correctness of these prices and cannot be held liable for same.

*The B. F. Goodrich Rubber Co. Call attention to their More Mileage Adjustment as follows:*

# FABRIC TIRES - - 6,000 Miles
# SILVERTOWN CORDS 8,000 Miles

Fix these new Goodrich Adjustment figures firmly in your mind—6,000 miles for Fabrics and 8,000 miles for Silvertowns—instead of 3,500 and 5,000 respectively heretofore in force.

This new adjustment stands back of all Goodrich Tires, including tires already purchased and in the hands of user and dealer. Goodrich Tires in actual usage on road and pavement are today unfolding such matchless mileage, regularly in excess of adjustment basis that Goodrich knows it has the strongest, most durable tires that the rubber industry has produced.

The Goodrich Adjustment Mileage is increased because Goodrich knows the mileage in its tires, and you can supply your trade confident that with fair and square usage a Goodrich Fabric will render at least 6,000 miles and a Silvertown Cord at least 8,000.

We maintain Branches in over a hundred cities and towns. Get in touch with your nearest Goodrich Branch for further information.

THE B. F. GOODRICH RUBBER COMPANY
AKRON, OHIO

# GOODRICH TIRES

*Best in the Long Run*

# BRUNSWICK TIRES

## The Choice of Men Who Know Quality

THE experienced driver, the man who knows tires by tests and comparisons, best appreciates the merits of Brunswicks. He realizes that tire quality depends on the standards and principles of the maker.

The House of Brunswick won success in many fields of production by giving all that it was possible to give. A narrow margin of profit made possible the highest quality and brought far greater sales. The tremendous selling-organization developed through 74 years of manufacture saved on the cost.

Tires are not built by secret processes. It is a question of workmanship and choice of materials. The Brunswick Tire you buy is the best that money, research and experience can make it. A corps of experts is constantly striving to build still better tires. Every Brunswick must meet their severe standards of excellence before it leaves the factory.

Put a Brunswick to any test you wish. Examine the fabric and other materials in a laboratory. This has already been done by us before it reaches you. Study its construction. You will find that it combines every known tire feature.

Then test it on the road, by actual use. Note its record for durability and resiliency. You'll want all Brunswicks.

These sound, enduring tires cost no more than others. For it is logical that The House of Brunswick can stand a higher manufacturing cost than that of other concerns selling tires at equal prices.

Brunswick Dealers can supply you with cord and fabric tires in a variety of treads. Choose the one that suits you best. All will give more mileage than you are used to.

There's a Brunswick Tire for every car.

**The Brunswick-Balke-Collender Co.,** General Offices: 623-633 S. Wabash Ave., Chicago

Branches in the Principal Cities of the United States and Canada

## MORE AND BETTER SERVICE

Users of high-grade tires are getting more and better service out of them; but there is no certainty of mileage. High quality of itself does not assure it. The tire structure may be imperfect.

In McGraw Tires such uncertainty is avoided by a simple operation which automatically prevents imperfections during manufacture — The Duplex Process.

Barring mis-use and abuse, McGraw Tires yield the full mileage expected of them.

**GUARANTEE**

**Fabric Tires.... 6,000 Miles**
**Cord Tires..... 8,000 Miles**

The McGraw proposition is especially attractive to dealers because of the percentage of repeat orders. The uniform service of McGraw Tires makes satisfied customers.

**THE McGRAW TIRE & RUBBER COMPANY**

# Sell True Tire Service

THE *true value* in Racine Multi-Mile Cord Tires is an all important point both for tire dealer and for tire user. To both it means sure service, and the good dealer is as anxious to sell sure service as the user is to buy it.

## Racine Extra Tests

True value is certified in Racine Multi-Mile Cord Tires by the exacting Extra Tests to which each tire is subjected in Racine Rubber Company factories.

## Racine Absorbing Shock Strip

And then—Racine Multi-Mile Cord Tires are even further bettered by the exclusive development of Racine chemists—the Racine Absorbing Shock Strip. Just look at the tire. It is scientifically non-skid, and renowned for its extra wear.

Sell the complete Racine Rubber Company line—Racine Multi-Mile Cord Tires, Racine Country Road Tires, Racine Tubes, Racine Supreme Tire Sundries. For complete details of the Racine opportunity, write the factory or the nearest Racine Rubber Company distributor.

RACINE RUBBER COMPANY
Racine, Wisconsin

# RACINE MULTI-MILE CORD TIRES

RACINE RUBBER COMPANY · EXTRA TESTED · TIRES

See that extra strip of blended rubber between tread and carcass. That is the Racine Absorbing Shock Strip. It is of graduated resiliency, so that flex of body and tread is equalized, and what is known as tread separation is prevented.

HIGH QUALITY

TIRE ACCESSORIES

# One of the Quick Selling Ajax H. Q. Tire Accessories

EVERY tire dealer can add new profit to his tire business with the Ajax H. Q. (High Quality) line of Tire Accessories and Repair Materials.

The line is complete—everything your customers need to meet any tire emergency or to make any tire repair.

## Ajax H. Q. Leak Stop Patching Rubber

The handy can-full of Ajax H. Q. Leak Stop Patching Rubber should be in every motorist's kit. It's perfect repair for tube punctures or blowouts. Just as handy about the home, too, for patching garden hose, rubber boots, hot-water bottles.

This is but one of the quick-selling line. Each article is a rapid seller—each puts new profit in your business.

# FEDERAL

## DOUBLE CABLE BASE CORD TIRES

## A Big Selling Advantage

THE firm grip the Double-Cable-Base gives Federal tires to their rims, also gives Federal dealers a "firm grip" upon the tire sales of their territory.

Additional wear and long life are afforded by four twisted steel cables running through the base of the tires. They hold the tire securely on the rim, prevent tube pinching, rim cutting and blow-outs above rim, and relieve side wall chafing.

Unusual resiliency and durability are also added by our method of internal air pressure moulding of separate diagonal layers of loose cords, impregnated with live rubber. This gives even tension that distributes road strain uniformly.

Besides the black non-skid Federal Cord Tire there are the white non-skid "Rugged" tread extra ply fabric and the black "Traffik" tread.

Write for dealer information.

**The Federal Rubber Co., of Illinois**

**Factories, Cudahy, Wisconsin**

Manufacturers of Federal Cord and Fabric Automobile Tires, Motor Cycle Tires, Bicycle Tires, Inner Tubes Accessories and Mechanical Rubber Goods

# BILTWELL TIRES

"MASTER OF THE ROAD"

## LONG SERVICE
of
## BILTWELL TIRES
**Lies in**

— the rich quality of materials used.

— the expert workmanship incorporated in their manufacture.

— the fact that they are extra well reinforced where stresses are applied.

— and the fact that the last word in rubber-making machinery is used in their construction.

*Some attractive territory is still available for the man who wants the best.*

**THE BILTWELL TIRE & RUBBER CO.**

**MADE AT AKRON**

TRACTION TREAD

Digitized by Google

THERE has never been any difficulty in selling Kelly Tires—cord or fabric.

The only trouble has been in making enough of them.

Why advertise, then?

For the same reason that a wise man carries insurance on a perfectly fire-proof building.

Some day we hope to catch up with the demand.

# BEARING DATA SECTION

section we have published the type number of both Ball and Roller Bearings used in about 3,000 models of Passenger Cars and Trucks from 1909 to 1919. Where ings are used only the number of the bearing is given. Where Roller Bearings are used both the name of the bearing and the number are given

## EQUIVALENT TABLE OF ANNULAR BEARINGS

lar Ball Bearings are interchangeable. Below is a table showing the type number of each manufacturer equivalent to numbers we have used, which appear in the nn.

**FAN BEARINGS**
GG—Hub Bearing.
HH—Water Pump Shaft Bearing.
J J—Air Pump Shaft Bearing.

**STEERING POST**
KK—Thrust Upper.
LL—Thrust Lower.

TO USE THIS TABLE—Look in the key for the particular bearing you desire; note the letters in front of the bearing; find the car the nediately follows the name of the car, follow it until you find the letters shown in the key—the number immediately following is the key f the bearing that we have used, turn to the equivalent table at beginning of Bearing Section; the key number is in the first column; by across you can obtain the type number of any manufacturer you desire. Ball bearings of all makes are interchangeable—we, therefore, give umber. In some instances you will find as follows: 307 x 1 *Y*″; this means, 307 bearing with a special width, namely, 1 *Y*″ wide instead of width employed. Where the letters B, C, N, D or T appear after the bearing, that letter must be used in ordering, as it is part of the manu- designation number.

oller Bearings, we give the name of the manufacturer, followed by the number, as (Hy. 16727) meaning, Hyatt bearing No. 16727. Timken an be supplied in parts, being composed of cone and cup. The numbers given show the cone first, as (5351-5320), 5351 being the cone and 5320 Where Timken Bearings immediately follow name of car and model, and before any letter is used, it means that all bearings mentioned in el are Timken Rollers.

# FAFNIR

*Single Row Radial (Medium) 300 Series*

*Double Row Radial (Medium) 6300N Series*

*Double Row Radio Thrust (Medium) 8300 Series*

*Magneto or Open Type (Extra Light) 5100 Series*

## Fafnir Single Row Bearings Series 200, 300, 400.

Complete factory stock carried. These interchange with single row series of all standard makes.

## Fafnir Double Row Bearings Series 6200N, 6300N, 6400N.

Stocks carried of all most called for sizes. These bearings interchange with American width double row bearings.

## Fafnir Double Row Angular Contact Bearings 8200, 8300, 8400

These bearings have same dimensions as 6000N Series. They are designed to take exceptionally heavy thrust loads in addition to radial loads.

## Fafnir Magneto Type Bearings 5100, 5200, 5300 Series.

These bearings are largely used in magnetos and starting and lighting units.

### *Largest Assortment of Types and Sizes in America*

*Following is a list of distributors of Fafnir Ball Bearings. Substantial stocks are carried by all distributors and prompt and efficient service will be rendered by them on receipt of orders and inquiries.*

# The Sign of Service on Timken, Hyatt and New Departure Bearings in 816 Cities

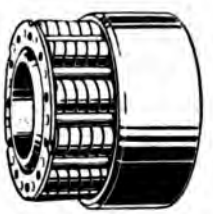
And it is the sign of *Authorized* service.

It marks an Authorized Distributor of the Bearing Service Company.

Wherever you see this sign you may purchase *genuine* new Timken, Hyatt and New Departure Bearings for replacements.

There is only one official factory service organization of Timken, Hyatt and New Departure and this is the Bearings Service Company and its Authorized Distributors. Remember this when you need genuine Timken, Hyatt and New Departure Bearings.

**TIMKEN HYATT NEW DEPARTURE**



Atlanta, Boston, Chicago, Detroit, Los Angeles, Minneapolis, San Francisco, New York, Seattle, Kansas City, Dallas, Cleveland, Denver

**BEARINGS SERVICE COMPANY**

*General Offices:* Detroit, Michigan

Indianapolis, Rochester, Oakland, Cal., Philadelphia, St. Louis, New Orleans, Pittsburgh, Omaha, Fresno, Portland, Ore., Toronto, Can., Brooklyn, Milwaukee

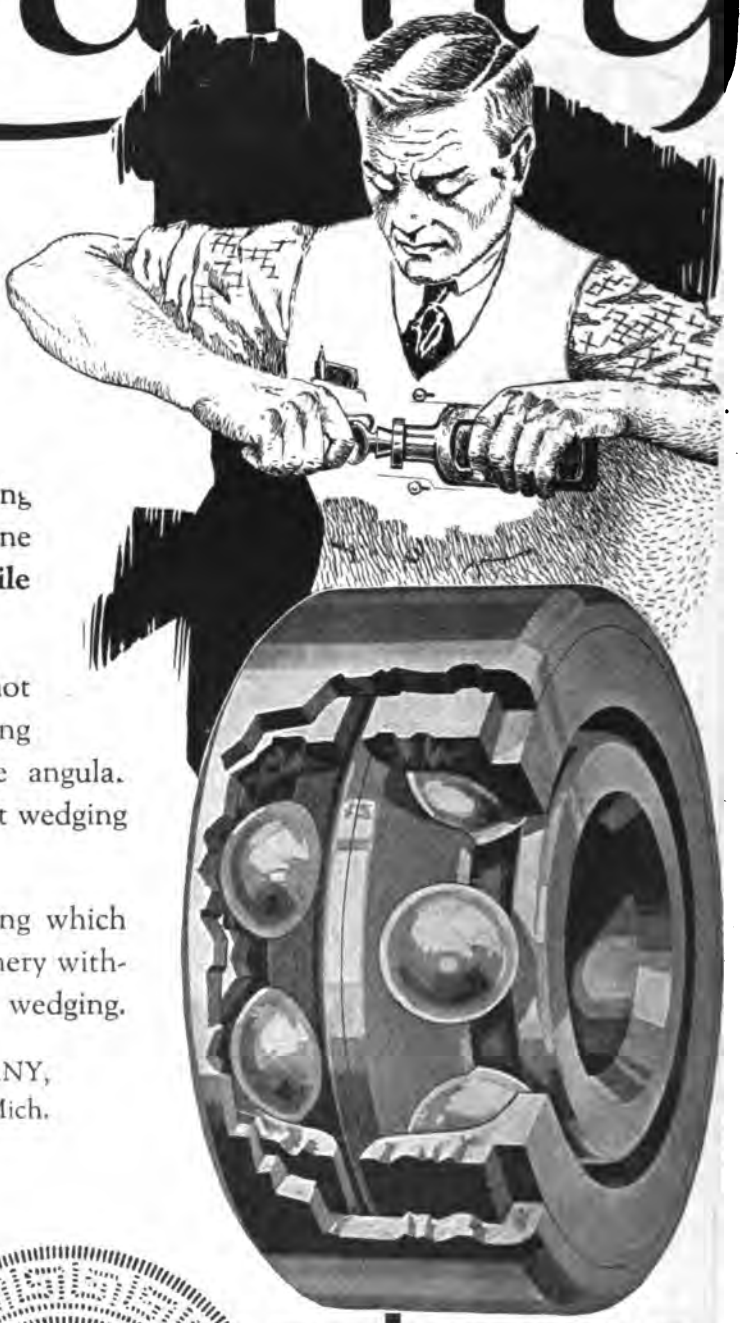
# Quality



TRY to revolve a tapered stopper in a bottle **while pressing inward.** The harder you press, the harder it turns, because of the wedging action with its resultant friction.

Repeat this operation with the ball bearing illustrated, holding the outer member in one hand and rotating the inner member **while pressing inward** as before.

You find that the ease of rotation is not impaired by the end thrust. The ball bearing turns quite freely, for the New Departure angular contact bearing absorbs end thrusts without wedging action and its consequent frictional drag.

The **ball** type is the **only** form of bearing which resists these end-on loads in modern machinery without loss of power due to the friction of wedging.

THE NEW DEPARTURE MFG. COMPANY,
Bristol, Conn. Detroit, Mich.

448

Makers of S R B Annular Ball Bearings, Taper Roller Bearings, Steel Balls and *Rudge-Whitworth* Wire Wheels.

SRB

## *Standard Bearings will withstand greater overloading*

The design allows for more balls than any other bearing, making possible a smoother and more even distribution of the load.

This standard principle of load distribution, backed by exacting selection of materials, and by scrupulous accuracy of workmanship, has produced a bearing of much greater strength and longer life.

**STANDARD ROLLER BEARING CO.**
PHILADELPHIA, U. S. A.

# GURNEY

## BALL BEARINGS

## Their Load Capacity is Greater

The exceptional load capacity of Gurney Bearings is due to two specific causes; by virtue of the design of the bearing and the process of assembling, it is possible to put into it, without the use of filling slots, the maximum number of the maximum size of balls. The advantage of this is too obvious for comment.

Secondly, there is realized for each ball of given size distinctly greater capacity than has heretofore been effected by virtue of the character of the raceways that are ground in the Gurney plant. By the advances in precision which have been worked out by us and the closer conformity of race curvature to ball curvature thus made commercially possible, we have made possible and have realized a larger area of contact between ball and raceway and have thus actually gained a decided increase in ball capacity.

Our bearings are listed with greater load capacity than other makes. This sometimes arouses a little skepticism. But their ratings are in reality conservative. They are accounted for by the characteristics explained above.

# Strom BEARINGS

THE consistent growth of our business and the present wide-spread and steadily increasing demand for Strom Bearings is but the logical result of that high quality which has always been built into our product. This quality is being proved daily by the dependable service Strom Bearings are giving as standard equipment in many lines of industry.

**U.S.Ball Bearing Mfg. Co.**

## Trade Gossip

Continued from page 39

George M. Graham of the Pierce-Arrow Motor Car Co. has been appointed a member of the highways committee of the N. A. C. C., of which Roy D. Chapin, of the Hudson Motor Car Co., is chairman.

V. C. Kloepper has resigned as chief engineer of the automotive department of the National Tool & Manufacturing Co., St. Louis, Mo.

A. B. Browne, a major with the Motors and Vehicles Division of the U. S. Army, has become associated with the A. J. Detlaff Co., clutch manufacturers, Detroit.

Heber H. Smith has resigned as western manager of Colliers to join the Green, Fulton, Cunningham Co., Detroit.

H. R. Clime, until recently special representative of the Globe Rubber Tire Mfg. Co. in the east, has been appointed manager of the company's Chicago branch in charge of the central territory, with headquarters at 2029 South Michigan Avenue.

J. C. Witwer, who has been assistant superintendent in charge of production for the International India Rubber Corp., South Bend, Ind., has been promoted to factory manager. He was formerly with the Kelly-Springfield Tire Co. and with the Goodyear Tire & Rubber Co.

Frank J. Rowan, who has managed the British business of Gaston, Williams & Wigmore of New York, has resigned. His future business plans had not been disclosed, but it is believed that he will be identified with a British product.

Charles F. Barth, manager of the engine and axle department of the Chevrolet Motor Co., Flint, Mich., has been promoted to general manager, and Thomas E. Houghton, manager of the assembly department, has been promoted to factory manager.

H. E. Henry, formerly sales manager of the Fulflo Pump Co., Blanchester, Ohio, has been appointed sales manager of the Michigan Machine Co., Detroit.

Three former Locomobile men have returned to the company. J. Murray Page has been appointed Western district manager of the Locomobile Co. of America. Clinton B. Amorous, recently returned from duty as major in the aircraft zone of advance in France, is Chicago manager. J. W. Florida, a lieutenant-colonel in the Motor Transport Corps in France, resumes his old position of assistant manager at the Philadelphia branch.

Clarence A. Triphagen, manager of the Reo factory branch at Lansing, Mich., has been made manager of the factory branch at Detroit. W. Carl Parker, head of the truck sales promotion department, succeeds Mr. Triphagan as manager of the Lansing branch.

U. Ellis Lazelle has been made superintendent of the Ford Motor Co. of Canada. Previous to assuming his new position Mr. Lazelle was connected with the Ford service department of the Canadian plant for several years.

Harris N. Pickett, until recently advertising and assistant sales manager of the General Asbestos & Rubber Co., Charleston, S. C., has been appointed advertising manager of the Ohio Trailer Co., Cleveland.

James A. Stairs has concluded his work as general superintendent of the ordnance department of the Harroun Motors Corp., Wayne, Mich. He is taking a vacation before undertaking new employment.

Major William M. Britton, one of the designers of the standard military truck and recently discharged from the army, has become chief engineer of the Republic Motor Truck Co.

Capt. Fred Post, who has been discharged from the Motor Transport Corps, is now with the General Motors Truck Co. at Indianapolis, which has just been made a factory branch. Mr. Post, before entering into Government service, was connected with the Olds Motor Co. for fourteen years. He will devote his entire time to marketing GMC trucks in Indiana, Kentucky, and a part of Ohio.

R. C. Spinning, formerly assistant manager of sales and advertising for the Service Motor Truck Co., Wabash, Ind., has been made advertising manager. Frank L. Johnson will be manager of sales promotion.

F. I. Reynolds, for many years with the United States Tire Co., New York, as sales manager of pneumatic tires, has been appointed sales director of the Keystone Tire & Rubber Co., New York. He was previously connected with the Diamond Rubber Co. as sales manager, and after its absorption, was with the B. F. Goodrich Co., Akron.

John B. Castino will be district manager in charge of the Chicago office of the SKF Industries, Inc., recently opened at 1314 Marquette Building.

Charles C. Walsh has been appointed sales representative for Michigan and Indiana for the F. R. Blair & Co., Inc., New York City.

E. S. Cole, for many years identified with the White Co. and later in St. Louis as manager for Missouri, Arkansas and Oklahoma for the Little Giant truck, has been appointed Canadian sales representative of the Traffic Motor Truck Corp.

Inglish Horckitz, formerly with the Frend Campbell Auto Supply Co., has been appointed district manager of the Ever Tight Piston Ring Co., with headquarters in St. Louis. His territory includes the eastern half of the United States.

Guy W. Yaugham, formerly in charge of production for the Wright-Martin Aircraft Corp., New Brunswick, N. J., has been appointed vice-president and general manager of the Van Blerck Motor Co., Monroe, Mich.

George T. Smith was elected president of the Joseph Dixon Crucible Co. at the annual meeting held recently.

# ZENITH
# CARBURETOR

## Good Carburetion

**—means a substantial saving in fuel**
**—means owner satisfaction.**

When the U. S. Naval experts chose the Zenith carburetor for the Trans-Atlantic planes, they based their choice on the actual records of reliability and economy established under their official observation in long and varied service.

In this first flight across the Atlantic, marking a new epoch in the world's history, lives depended on the fuel supply not being wasted. The success of the NC4 bears convincing testimony to Zenith Economy.

The owner of a Zenith equipped passenger car or truck enjoys delightful freedom from carburetion troubles—can understand from his own experience:—

—Why it takes four factories—three in Europe and one in America—to supply the world-wide demand.

—Why the Nieuport plane which beat all the world records for altitude—30,800 feet—had Zenith carburetors fitted to its Hispano-Suiza engines.

—Why Zenith is used by a majority of European automobile manufacturers, including Delage, Peugeot, Gregoire, DeDion and many other well known makers.

—Why it is used by over one hundred manufacturers of passenger cars and trucks in the U. S. A.

—Why YOU should use Zenith Equipment.

"NORMA"
PRECISION
BALL BEARINGS
(PATENTED)

The measure of value of a car, truck, tractor or power boat is its capacity for rendering service—for returning dividends in pleasure or profit. On this basis, continuity of service—uninterrupted operation—determines earning power. The failure of one small bearing in the electrical apparatus puts an end to earnings—until repairs are made.

Their proved capacity for continuous service has made "NORMA" Bearings the standards in those magnetos and lighting generators internationally known to be trustworthy and dependable.

Be SURE. See that Your Electrical Apparatus is "NORMA" Equipped.

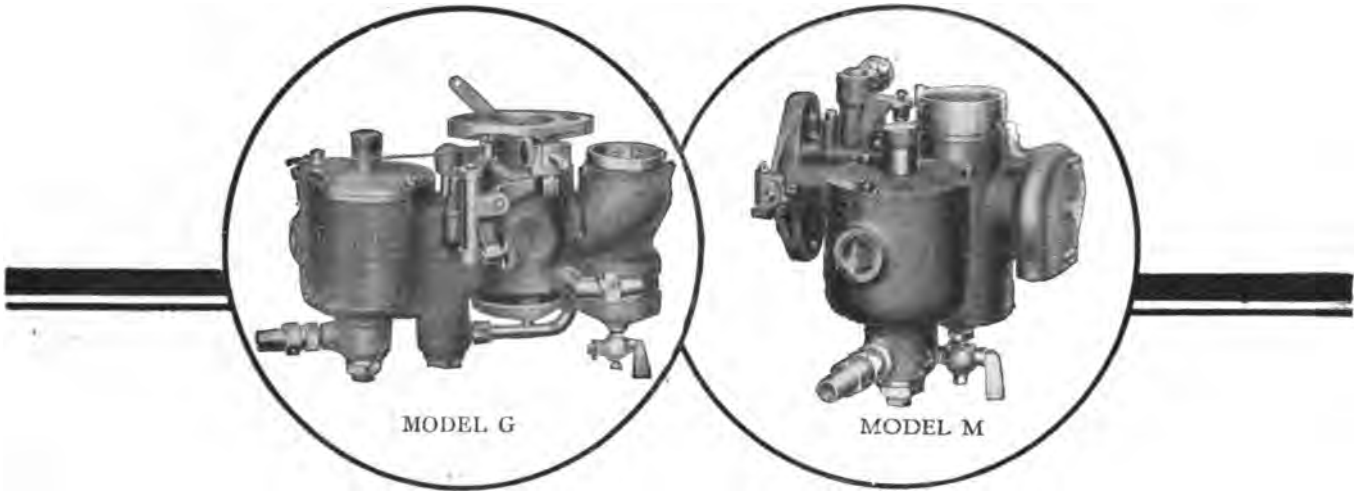
# Leading Automotive Engineers Have Proved Rayfield Performance



Repeated tests by America's leading motor car engineers have proved that Rayfield Carburetors get the greatest efficiency from *any* motor.

Rayfield design and Rayfield construction are responsible for this fact.

Rigid inspection, the use of only the finest materials, and testing of each component part as well as triple testing of each finished carburetor insure a uniformity of product that the motor car manufacturer has found he can depend upon to produce perfect carburetion in every case.

Consequently the Rayfield costs more. Its extra cost is gladly paid, because the Rayfield Carburetor and only the Rayfield brings out with greater efficiency the good points leading engineers have designed in their motors.

# Qualities You Should Possess to Sell Cars

## Confidence in Your Company and Its Product Essential for Success—You Should Be Enthusiastic and Aggressive to Make Sales

*By EDWARD G. INGRAM*

EVERY automobile salesman should have confidence in his company. Without this confidence you cannot possess enthusiasm and without enthusiasm you cannot possess the aggressiveness so necessary in making sales. Inspiration to overcome sales obstacles is largely bred by confidence in your company and its product.

Next in importance to believing in your company comes the question of knowing your car. Without this knowledge you cannot talk intelligently of its mechanical advantages. Such knowledge can be obtained by making a careful study of the catalogs and instruction books issued by your company, and also of the car itself.

To speak enthusiastically of the ability of the car on the road it is necessary for you to possess almost as much knowledge of its performance as the demonstrator. In order to learn this you will necessarily have to drive the car for some time. In this way you will learn just how rapidly the car will accelerate under different conditions and what hills in your neighborhood it will go upon the high gear. As many of your prospects will already be motorists who have driven other cars in your territory for some time, it is necessary for you to be able to talk to them as one motorist would to another in discussing car performance.

You should also endeavor to obtain as much knowledge as possible regarding your competitors' cars. This does not mean that you should be prepared to "knock" your competitors. It does mean, however, that you should be in a position to bring out the superior points possessed by your car and show why you believe it to be a better investment.

Before seeking an interview with a new prospect you should find out as much as possible about him. Find out his occupation and endeavor to determine his principal motive in buying a car. A knowledge of his financial ability will often assist you in suggesting terms, or may save you from wasting time on a person who cannot buy. Sell your personality by finding out a prospect's hobby and discussing it with him, thus forcing him to become interested in you. Don't do too much talking but make the words you do say count. Some prospects will do the selling themselves if you let them ask questions and simply answer them.

Many salesmen fail to make sales because they do not know when to close an order. They fear a prospect is not convinced when he really is, and continue to talk until they talk themselves out of an order. Watch your prospect carefully and do not be afraid to hand him the order blank when you decide the time is ripe.

When approaching a prospect you should begin by asking him questions in order to get him to talking. When he in turn commences to ask questions you should give quick and aggressive answers which will convince him. When nearing the end of a sales talk recall the points on which he seemed to be convinced and drive these home again.

Do not forget that talking service is one of the most valuable means of selling a prospect. Tell the prospect about the large number of service stations your company has scattered throughout the country and the large variety of parts carried at each station. Call attention to the fact that only competent mechanics are employed at these service stations and they always do a good job in the shortest possible time.

A thorough knowledge of your territory is also essential for success. You should canvass your entire territory and use an accurate file system so that you can always find out all about a prospect in but a moment's time by turning to your file. Compiling such a list naturally means a great deal of hard work. The salesman who thinks he can be really successful without working hard had better seek another occupation.

Getting prospects is, of course, one of your biggest undertakings. Personal calls are of great value, and the telephone can be used to advantage. You should always keep in touch with those who have already bought your cars as more prospects are sure to be obtained in this way. Every satisfied owner is really selling your car every time he expresses this satisfaction to his friends.

Digitized by Google

Advertising is one of the most important factors in getting prospects. The persistent use of newspaper advertisements usually brings results. You should send out carefully prepared letters to all possible prospects endeavoring as much as possible to suit each letter to the individual. Posters should also be distributed freely. These will usually be supplied by your company as is the case with catalogs.

### Hudson Building New Plant for Essex Car

The Hudson Motor Car Co., Detroit, is about to spend $2,250,000 to build a plant for the manufacture of Essex cars. Of this sum, $1,250,000 will be invested in land and new buildings, and $1,000,000 in machinery and equipment. Work on the new plant is under way.

The Hudson company proposes to double its output in 1920. The company will produce 70,000 cars of both makes next year. This year's schedule called for 40,000 machines, 20,000 Hudson and 20,000 Essex.

### Bosma Becomes Sales Manager of Field Mfg. Co.

F. J. Bosma, who was formerly district representative for the Parry Manufacturing Co. of Indianapolis, has been appointed sales manager for the Field Mfg. Co., with headquarters at Owosso, Michigan. A. L. Ditter, who was formerly sales manager, has been appointed general sales manager.

### Bacon Becomes Sales Manager of McGraw

H. M. Bacon has become general sales manager of the McGraw Tire & Rubber Co., Cleveland, Ohio. He was formerly manager of the Diamond tire division of the B. F. Goodrich Co., Akron, Ohio.

### V. M. Smith Becomes Gen. Superintendent, Supreme Motors

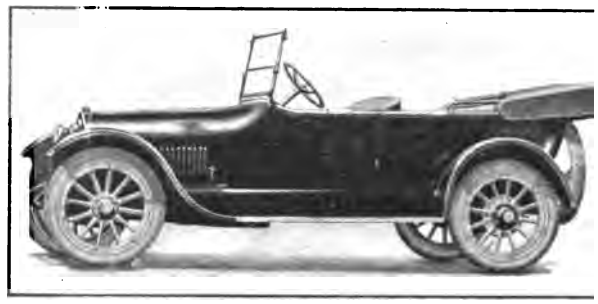
As another step towards perfecting its organization, The Supreme Motors Corp., Warren, Ohio, has appointed V. M. Smith general superintendent.

V. M. SMITH, GENERAL SUPERINTENDENT OF SUPREME MOTORS CORP.

Mr. Smith comes to the Supreme Motors from the Hudson Motor Car Co., where he served as production manager of the Essex engine. Prior to his connection with the Hudson Company, he was general superintendent of the Continental Motors Corp,, and previous to that he was assistant superintendent of the Lycoming Foundry and Machine Co., at Williamsport, Pa., and assistant superintendent of the Mercer Automobile Co.

## Buick for 1920 Shows Refinemen

Although 51 changes in design are to be found in 1920 Buick car offered by the Buick Mfg. Car Flint, Mich., most of these are of a minor character general features of construction remaining the s Six models will be built these consisting of the K 3-passenger roadster, listing at $1,495; the K-45, 5- senger touring car, listing at $1,495; the K-46, tou coupe, listing at $2,085; the K-47, 5-passenger tou sedan, listing at $2,225; the K-49, 7-passenger tou car, listing at $1,785; and the K-50, 7-passenger se listing at $2,695.



BUICK TOURING CAR FOR 1920

An improvement found on the engine is that the spider and blades have been made heavier, and the belt is of an improved design to prevent climbing. cast bronze is used for the oil pump drive gear, in of cold rolled steel.

The headlamps are of new design, with doors structed of two pieces, which allow the nickeled pa be made of brass to prevent rusting. The lamp conn is made of seamless steel, and the glass is fasten the lamp body.

The Willard storage battery has been adopted design of spark plug terminal is used, which locks tively to the plug. The switch is provided with a design rotor, and the switch handles are set at 45 which prevents interference when manipulated by operator in night driving. The switch is so arra that the dimmer and head lights may be shut off parking the car.

### Zenith Grows

The Detroit plant of the Zenith Carbureter Co. is ducing 1,800 carbureters daily and has just incre its capitalization from $40,000 to $320,000. Exte building work is about to start, the nature of which be announced later.

### New California Plant for Scripps-Booth

The Scripps-Booth Co. of California will erect i spring a $1,500,000 automobile factory at San I cisco. Clifford Durant, Chevrolet branch man heads the company.

### New Reo Factory

Excavations for the new factory units to be er by the Reo Motor Car Co., Lansing, Mich., are under way. The construction of the unit will mea conversion of the former tractor unit into a motor p

### Franklin Will Produce 18,000 Cars a Year

A production program of 18,000 cars a year been outlined by the Franklin Motor Car Co., S cuse, N. Y. The company has begun the erection $400,000 addition to its plant and is employing a shift of 500 men.

# Over 352 Million Dollars to Be Spent on Highways

## Amount of Money to Be Spent on Roads This Year Would Build Another Panama Canal

THE United States is in the midst of the greatest highway building campaign in the history of the world. The aggregate amount to be expended this year on the roads and lanes of the country would build and duplicate another Panama Canal. According to figures collected by the B. F. Goodrich Rubber Company, combined forces of the federal government, states and counties will spend $352,216,016 in new construction and maintenance of the nation's network of highways. This is the first complete survey of 1919 good roads expenditures. The amounts to be spent in each state in the Union follow:

Alabama, $1,000,000; Arizona, $6,250,000; Arkansas, $4,297,398; California, $20,000,000; Colorado, $4,742,000; Connecticut, $8,000,000; Delaware, $8,528,000; Florida, $8,000,000; Georgia, $7,911,000; Idaho, $2,100,000; Illinois, $6,013,304; Indiana, $12,000,000; Iowa, $20,498,534; Kansas, $8,000,000; Kentucky, $3,500,000; Louisiana, $2,000,000; Maine, $1,630,000; Maryland, $6,750,000; Massachusetts, $6,000,000; Michigan, $15,000,000; Minnesota, $11,127,986! Mississippi, $7,000,000; Missouri, $5,413,079; Montana, $6,300,000; Nebraska, $2,005,000; Nevada, $1,377,499; New Hampshire, $1,630,000; New Jersey, $6,500,000; New Mexico, $4,000,000; New York, $2,000,000; North Carolina, $5,000,000; North Dakota, $1,082,000; Ohio, $13,321,500; Oklahoma, $3,600,000; Oregon, $8,000,000; Pennsylvania, $8,780,000; Rhode Island, $1,470,000; South Carolina, $7,000,000; South Dakota, $6,767,276; Tennessee, $3,650,996; Texas, $60,480,000; Utah, $10,092,794; Vermont, $1,797,650; Virginia, $3,400,000; Washington, $6,500,000; West Virginia, $2,000,000; Wisconsin, $3,200,000; Wyoming, $6,500,000.

Roughly, Goodrich officials estimate that the expenditures for highway improvement is approximately $3.09 per capita; or, to emphasize this, each man, woman and child in the United States would contribute this much for the building and bettering of roads were taxation on such a basis. Were the expense apportioned out on an average basis each state would pay $7,083,333.

The era of good roads talk has at last been succeeded by the era of good roads construction. Public sentiment is solidly behind extensive highway building programs now, says one of the Goodrich highway correspondents, but the enthusiasm must not wane. The millions being spent will be spent in vain unless states undertake to repair roads as quickly as they build.

While the amount available for expenditure this year seems staggering, it will not be enough to make up for deferred war construction, for normally the amount spent on roads in the United States is well above $250,000,000 and the war restriction brakes applied brought road building almost to a stop in many localities.

Three great factors have been largely responsible for this year's amazing highway expenditures. First, the incentive for states to match Federal aid appropriations; second, the passage of enormous bond issues for good roads in many states; and third, the attention on the urgent need of good roads by the war.

Reports from state highway commissioners to the Goodrich officials some interesting individual features.

Construction in Virginia during the next six years of 3,750 miles of highway at a cost of more than $60,000,000 has been approved.

In the New England States—Connecticut, Massachusetts, Rhode Island, Vermont and New Hampshire have been interesting in closing up short gaps on their main highways, which are otherwise improved for the entire distance. The same condition has been true in New York, where numerous projects are being linked up with an extensive network of roads which are already hard surfaced.

One of the features of this year's work will be the completion of the Dixie Highway, which will be done by the states co-operating with each other and with the Government. For instance, in Illinois the highway will be improved in many spots, one of which is over a distance of 54.5 miles at a cost of $904,700, and the construction will be of concrete and bituminous macadam. At the same time Georgia will be working on the road from Atlanta through to Macon, a distance of 72 miles and a continuation of the Dixie Highway in that state. In Tennessee and Kentucky projects are under way which will further serve to improve this famous old highway, which cuts through the central section of the country from north to south.

Iowa is entitled to the palm for consistent road construction. This state, which has more automobiles per capita than any other state in the Union, spent in the neighborhod of $15,000,000 during both 1917 and 1918, and is spending $20,498,534 this year. Iowa has an ideal road building program. When their state system is completed it will be not only the equivalent of a trunk line system converging to the cities, but to a trunk line clear across the state from east to west through every county, and north and south through every county as well. The Iowa plan will give each state the most notable road achievement of any state in the nation. Nowhere else has a system been adopted that treats every county alike or that reaches every district impartially.

Texas leads the nation in highway expenditures this year with $60,480,000 available. Texas also led last year. Within her borders Texas has 126,000 miles of unimproved roads, as against 22,000 miles of improved highway.

Iowa, California, Michigan, Ohio, Indiana and Minnesota ran next to Texas in expenditures for road building in the order named. Thus it will be noted that the agricultural states' appropriations exceed those of other regions by many millions.

# Steel Truck Wheels

## Discussing Characteristics of Different Types in Use and Comparing Their Strength with that of Wooden Wheels*

*By P. KLINGER*
Chief Engineer, Dayton Steel Foundry Company

PRIOR to 1914 the motor truck had become a recognized and important part of industrial life, but the trying and strenuous conditions of the past 4 years have done much to cause the general public to realize the tremendous importance of motor trucks, with a consequent demand for the service which they can render. Under war-time production demands, time-saving possibilities of fast motor-truck service were so well demonstrated that today trucks are operated under load and speed conditions that were formerly thought prohibitive. While recognizing that in the past the majority of trucks have been equipped with wooden wheels which as a whole gave good service, we believe the time is fast approaching when the results demanded in service will make imperative the substitution of steel wheels on medium and heavy-duty trucks, thus eliminating practically the last important truck unit made of wood. Nearly all truck engineers and manufacturers recognize this, but hesitate to adopt them, largely because a metal wheel is somewhat higher in first cost and also because some designs of metal wheels have not rendered the service expected. Just as the value of a motor truck lies in ability to perform economical service, and this economy is usually not dependent on first cost, so does the properly designed steel wheel ultimately prove itself to be a real economy.

### WHAT IS REQUIRED IN DESIGN

The design must be such that vibrations resulting from road shocks are not concentrated at any one point but distributed over, or dissipated throughout, the entire wheel structure; otherwise metal fatigue eventually results. Materials having a low elastic limit are not suitable for truck wheels any more than malleable or wrought iron is for vehicle springs, as a successful metal wheel must have a certain degree of resiliency. Many of you have no doubt had experience with the early designs of built-up metal wheels and are well acquainted with cracks developing in some types of cast disk and spoke wheels.

Various essential and fundamental metal casting principles have not been recognized in the design of some cast metal wheels, such as the fact that all steel or iron castings are composed of crystals which are formed as the metal cools and run as consistently as the fibers of wood. Just as the weak spots in wood are where the branches run out, so the weak spots in castings are found where right-angle joints occur. Crystals form regularly at right angles with the contour of the castings, and where sections meet at right angles two crystal formations join and there is a resulting line of weakness. To overcome this tendency heavy fillets have been used at intersections, but the added mass of metal usually causes shrink-holes and consequent weakness.

A hollow-spoke hollow-rim construction with a semi-flaring attachment to the rim is a partial recognition of this fundamental feature, but a full realization of it is attained only by the hollow-spoke wheel where the spokes join the rim in broad sweeping curves, giving an arch-like support to the rim, at the same time avoiding objectionable crystalline formation and placing the metal so that the high elastic quality of steel is utilized somewhat in the form of a spring instead of as a dead strut, as is the case of the straight spoke of either cruciform or U-section and also very largely with the hollow spoke with the semi-flaring connection to the rim. Some disk wheels have cracked around the hub as well as near the rim. When spoke wheels have cracked it has been almost invariably in the spoke near the rim or in the rim near the spoke, but this has not occurred in wheels having the broad flaring connection between the spoke and the rim.

### METAL WHEELS IN SERVICE

Probably the companies having the best opportunity to follow up wheels in service are the London General Omnibus or the Fifth Avenue Coach Co., both of which use metal wheels exclusively. The latter's first steel wheels were imported from Switzerland, being hollow spoke and solid rim with a very slight radius where the spoke joins the rim, and a number of these cracked in the rim between the spokes. However, they were welded and are still in service. It also used solid Y-spoke wheels, which cracked in the spoke where the spread of the Y starts; however, it got 50,000 miles out of the wheels, which was stated to be greatly in excess of the wood-wheel service. This company has steel wheels which have been in service for over 2 years and have developed no cracks or any other imperfections. These wheels have a flaring connection between the spoke and the rim. That it recognizes the ultimate economy of steel wheels is evidenced by the following quotation from one of its letters:

"The standardization of steel wheels has affected considerable economy, and the company has never for one moment regretted the initial outlay."

It is of interest here to note that the coach wheels last referred to are of the integral-hub type and the company is getting exceptional tire mileage; in fact, in almost every case where exceptional tire mileage is obtained metal wheels are in use. The tire companies recognize this, although they will not be quoted to that effect, but some claim as high as 100,000 miles.

The principal reason for added mileage on metal wheels is the fact that they are absolutely round with perfect fit and set for tire. They provide a true rolling surface and also have superior radiating qualities.

To quote the experimental engineer of one of the large tire companies:

"A well-built wood wheel is pretty rigid, and a properly designed steel wheel will be fully as flexible as a properly designed wood wheel. We find the most troublesome offense is in the wheels which are out of round, and especially those in which the deviation from true round is localized in one place. A flat wheel is the result. Metal-base tires, either demountable or pressed on, always give trouble on such wheels. Inasmuch as steel wheels are made to very accurate dimensions and moreover retain their original size and shape, you can

*Paper read before S. A. E.

Digitized by Google

readily see that the tire people are anxious for the development of steel wheels."

A large fleet owner writes:

"As to the accuracy of workmanship on wood wheels, this can be attained on new wheels but cannot be maintained owing to the shrinkage in dry weather and the swelling in wet. Turning the hose on the wheels every evening lessens the tendency of spokes to loosen."

A special investigation made among users and garages in six of the large cities of the country showed that many instances of wheel trouble never are reported to the manufacturer, being accepted as a necessary evil.

STRENGTH OF WOOD AND METAL WHEELS COMPARED

As to comparative strength the following table gives the results of tests made by a recognized testing bureau on wheels designed for the same truck using 36 by 5 front and 36 by 10 rear wheels.

STRENGTH TESTS OF METAL WHEELS

| Type | Weight, lb. | Maximum Radial Load Applied, lb. | Deformation at Maximum Load, in. | Permanent Set at Maximum Load, in. | Ultimate Side Thrust Loading, lb. |
|---|---|---|---|---|---|
| *36 by 5 Front Wheels* | | | | | |
| Pressed Steel, Built-up | 147 | 40,000 | ..... | ..... | 30,500 |
| Malleable Iron | 147 | 60,000 | 0.0677 | 0.0259 | 27,600 |
| Cast Steel Disk | 169 | 60,000 | 0.0359 | 0.0187 | 48,100 |
| Cast Steel, Hollow Rim, Hollow Flaring Spoke | 100 | 60,000 | 0.0645 | 0.0220 | 49,200 |
| Wood | | Front Wheels Not Tested. | | | |
| *36 by 10 Rear Wheels* | | | | | |
| Pressed Steel, Built-up | 341 | 75,000 | 0.4153 | 0.3425 | 43,200 |
| Malleable Iron | 266 | 100,000 | 0.1928 | 0.1180 | 42,500 |
| Cast Steel Disk | 268 | 100,000 | 0.0881 | 0.0261 | 75,500 |
| Cast Steel, Hollow Rim, Hollow Flaring Spoke | 286 | 100,000 | 0.0513 | 0.0113 | 101,000 |
| Wood | 252 | 60,000 | 0.1082 | 0.0336 | 43,700 |

It should be noted that the wood wheel was not loaded above 60,000 lb. as the speed of deformation indicated an approach to the yield point. The pressed steel built-up type front wheel yielded beyond the range of the instruments at 40,000 lb. loading, and the rear at 75,000-lb. loading required almost the extreme instrument range. The relatively slight permanent set and the great resistance to side-thrust in the case of the cast-steel wheels, and especially in the hollow full-flaring spoke type, should also be noted.

In June, 1918, a 3-ton Liberty truck equipped with hollow flaring spoke type steel wheels, and loaded to full capacity, was struck by a passenger train running at approximately 35 miles an hour, and the wheels were absolutely not injured, although the pressed-on tires of one rear wheel were forced ¾ in. sidewise at the bottom of wheel, the heavy rear axle was bent, the alloy-steel springs were torn in two and the body of truck completely demolished. This is cited as a real service test that proves the superior qualities of the integral hub, hollow, full-flaring spoke steel wheel under side swipe, as shown in the laboratory tests noted.

WEIGHTS OF DIFFERENT METAL WHEELS

| | 36 by 5 Front | 40 by 5 Dual | Set |
|---|---|---|---|
| Cast-Steel Hollow Flaring Spoke Integral-Hub Wheel | 130 | 269 | 798 |
| Hubless Type Metal Wheel with Hubs and Bolts | 158 | 319 | 954 |
| Pressed Steel Built-up Wheels | 131 | 275 | 812 |
| Wood Wheel with Hubs and Bolts | 116 | 236 | 904 |

Leaving the question of strength and considering weight, the comparisons given above compiled from data furnished by users of the types listed should be noted.

With a smaller size, say 2-ton, the wood and metal weights are approximately the same, and with larger sizes, 5-ton and up, the comparative weights are more in favor of the integral-hub type cast-steel wheels. As to first cost the integral-hub metal wheel is no doubt in most cases higher than the wood wheel, but there is such a variation in design and cost of hub equipments that in some cases the integral-hub metal wheel shows a saving in first cost.

For the large-size pneumatic truck tire equipment most of the tire companies favor metal wheels, and a number of different satisfactory types have already been made. So far as my knowledge goes these have not been given careful laboratory tests but have withstood strenuous service tests, such as driving at speeds as high as 45 miles per hour on 3-ton trucks, and withstanding tire inflation by hydraulic pressure as high as 390 lb. per sq. in. on a 44 by 10 cord tire. A metal wheel enables a demountable rib to be used with a wheel rim having an open slot for the valve stem, thus eliminating any lifting of the tire and rim when applying. The apparent increasing tendency to use some type of internal drive will do much to increase the metal wheel demand because of the better maintenance of gear mesh with the use of integral-hub metal wheels. Consistent co-operation between the foundryman and truck engineers has done and will continue to do much toward the satisfactory service to be realized from metal wheels, and the price question will be largely solved by standardization of designs with consequent quantity production.

## Van Sicklen Co. to Triple Its Present Output

Details of the reorganization of the Van Sicklen Speedometer Co., Chicago, Ill., and its plans for expansion were announced recently. The company, which recently was reincorporated, will have capital of $2,500,000, compared with $250,000 for the old company. It is stated that the enlarged capital is fully subscribed.

The reorganization has been largely in charge of Norman B. Church, who will be chairman of the board of directors. He states that all the stockholders of the old company retain their interests in the reorganization, among the larger interests being John W. Willys, of the Willys automobile companies. C. H. Hurlburd, president of the Elgin Watch Works; Ernest A. Hamill, president of the Corn Exchange National Bank; George M. Holley, president of the Holley Carburetor Company; T. F. Sheridan and A. D. Edwards.

N. H. Van Sicklen, Sr., will be president of the company, and his sons, N. H. Van Sicklen, Jr., and Charles Van Sicklen, will be vice-president and secretary, respectively. Chester B. Braselton will be a vice-president and director.

The company has contracts calling for the manufacture of 2,500 speedometers a day.

## Schmidt Joins Huffman Bros.

H. B. Schmidt, long identified with the automobile trade, has resigned as one of the directors, vice-president and purchasing agent for the Crow Elkhart Motor Corp. to become connected with the Huffman Brothers Motor Co., Elkhart, Ind., in the capacity of manager for the passenger car department of that institution. Mr. Schmidt will take up his new duties immediately.

# Rough, Heavy Trucking
## Requires Fine Workmanship Even to Small Parts

A truck-owner expects his transmission and differential to do the heaviest work he can put upon it, and to keep on giving dependable service. He has no desire to take out a differential or even look inside the transmission case.

A mechanism to meet these expectations must have the perfection of a fine watch, combined with the strength of a giant.

The differential bevel gears illustrated here are made with these requirements always in mind. As essential parts of the differential, they receive most careful attention in every step of production.

It is such accuracy and strength that have helped to build Brown-Lipe reputation for quality.

# Westinghouse

STARTING LIGHTING & IGNITION EQUIPMENT

## At Your Service

Increasing demand for Westinghouse Starting, Lighting and Ignition Equipment has resulted in increased productive facilities.

Additional plant space will shortly be available in Springfield, Mass., which will be utilized for the manufacture of Automobile Electrical Equipment. Production will begin here about September first.

Initial equipment will provide for an annual capacity of 240,000 complete sets of automotive equipment. The present line of switches, meters, fuses, fuse boxes, cut-outs and regulators, noiseless Bakelite-Micarta Gears and Gear Blanks, will be continued.

Tools, machinery, material handling devices, and testing equipment will be of the most modern type to assure the most accurate and efficient production.

With this capacity in addition to that of the present Newark plant, Westinghouse will be able to serve an increasing number of passenger car and motor truck builders.

...bile quality will be the ...ration and price secondary, is the ...ion of J. Edward Schipper, expressed in an article appearing in *Automotive Industries* entitled "Looking Ahead Three Years in Design of Cars." Regarding this he says:

"Passenger car development during the next three years will be distinctly in the direction of higher quality. The demand is assured for at least this period, and there is no need of producing a cheaper quality in order to stimulate sales. Besides, there is every indication that one of the greatest lessons of the war to be learned by America is to put quality first."

Regarding assembled cars he says:

Assembled cars are automaically forced into the high priced class because parts makers will build only high-quality units. This is clear when it is considered that it is utterly impossible to sell a car at $1,000 or less unless it is produced in very large numbers. Quality production must be backed up by a fundamental control of the sources of material supply. In fact, the tendency in the largest plants is to get further and further back to the ore in securing materials. Thus the product of the parts makers in the future will be found in the car selling at $1,800 and upward.

"This does not necessarily signify that in lower priced cars quality will be sacrificed. The difference in price will be made up in riding comfort as provided by increased space, more luxurious upholstering and fittings, greater speed range and accessibility and, possibly, in greater economy."

He goes on to explain that it is obvious from the foregoing there are two real markets, low priced and high priced, which manufacturers can cover by building two models.

The article continues:

"Just as it is perfectly logical for dealers to handle two cars, it is perfectly logical for manufacturers who are large enough to do so to make cars in each field, and there need be no real fear that one will 'kill' the other. Or, if the fear is entertained, the two models can be marketed under different names. There is no clearly defined dividing line between the two fields, but the $800 and the $2,750 car can stand side by side on the showroom floor, each appealing to a definite class of buyers; and there is a growing class that is apt to buy one of each. A trip through the wheat belt will confirm this."

Mr. Schipper takes an optimistic view of the solution of the fuel problem. Regarding this he remarks:

"Before the end of 1920 it is very probable that the fuel situation will have reached a condition of much ...ility. While definite statements have not ... the oil industry will have produced a fuel that can be guaranteed in quantity and quality for an indefinite period. Slight changes in design will probably be required to make use of the new fuel, while the present 6,000,000 cars and trucks will be taken care of by the production of sufficient of the current type of fuel to meet their needs.

"With less volatile fuel—and even with the present type of fuel—it is very possible that some means other than the suction of the engine will be utilized to accomplish the primary atomization. Electrical energy, or energy due to the storage of air, gas will probably be widely employed to either break up the fuel mechanically or vaporize it by the application of heat. Car and truck manufacturers refuse to be worried by the fuel shortage bugbear, and with the amount of thought at present being concentrated on the problem, early developments can be looked for with assurance,"

Discussing hot spot manifolds he expresses the opinion that these will continue to be used, but states that some cars are "over hot-spotted."

Speaking of radiator improvements he says:

"Some interesting experiments have been made on radiators which have a variable cooling area, depending upon the demands of the engine and climate. One such radiator is divided in the top tank so that the water does not flow through the central section until it surges over the partitions or dams in the tank. Under ordinary conditions the side sections take care of cooling, but in warmer weather the surging effect allows the central portion to be utilized."

---

THERE appears to be a general movement to do away with the policy of guaranteeing the mileage of tires. In a recent editorial *Motor World* says in part:

"There is no more sense in a reputable tire company guaranteeing a tire for 4,000 miles than there is in a shoe maker guaranteeing a pair of shoes for the same distance.

"A tire either is good or it isn't good. If it isn't good it can't get by at all, and if it is good it doesn't need any guarantee. A guarantee can't make a tire.

"A good tire, made by a good company, and sold by a good dealer will give the buyer far more miles than the guarantee covers—if the user has any sense on the tire question. The average man will get nearer 10,000 than he will 3,000.

"But—along comes some wild, reckless driver, whose idea of motoring is to see how near he can come to scaring the rest of the world to death. Taken collectively, he can ruin tires faster than the tire companies can guarantee them. He skids around corners, slaps on brakes to make up for his reckless speed, drives carelessly over bumps and rough roads

Digitized by Google

—and then demands an adjustment because his tires don't last.

Who pays

"The tire company? No.

"The dealer? Not directly.

"Who then? The man who is careful of his tires. He pays for the guarantee that is given to the reckless driver. To protect itself against the mad motorist the tire company has to add to the price of the careful user's tire.

"And when it comes to a kick the hardest kicker gets the best adjustment.

"How much better it would be if tires were sold as other good merchandise is sold.

"You would eliminate the grief of adjustments. You would avoid the chance of losing friends and customers. If you sold a good tire, and if people bought of you because you have a good reputation you would develop a sweetly running business—and make money at it."

One organization which is taking the lead in doing away with mileage guarantees is the United States Tire Co. In answering inquiries regarding this, J. N. Gunn, president, says in part:

"How on earth can you get away from a definite mileage guarantee in selling tires?

"As a matter of fact we have made a more definite guarantee. Our guarantee holds good regardless of the mileage a tire runs. But we do not urge mileage guarantees to sell tires. We stress quality.

"This policy of guaranteeing against imperfections in materials and workmanship without any mileage limitation is not really new with the United States Tire Company. We have never used any definite mileage basis in making adjustments on Royal cord tires which we have been manufacturing for four years. Furthermore, for years we have not advertised any definite mileage guarantees on any of our tires.

Having seen through a number of years of experience that the public liked the basis upon which Royal cord tires were sold it seemed the logical thing to do to put all United States tires on the same basis."

HERE is what Frank H. Miller, of the West Side Buick Sales Co., said when asked what he considered the requisites to success in the operation of a car agency, according to the *Stewart Lever:*

"The first and most obvious thing, of course, is to get the right car. Next, get the right kind of an organization to help you sell it and give service. Then, get the right location. By that I do not meant the most expensive, but one that is strategically located and a modern building. Fourth, and most important, but not so obvious to dealers it seems, watch out for your overhead. A 'top-heavy' overhead has broken many otherwise succesful car agencies. Fifth, be quick to incorporate in your own business any good and usable ideas you ever learn from brother dealers.

"We have found the logical means by which a car dealer's overhead can be rendered a negligible quantity. Simply sell accessories, the additional equipment that any motorist today knows he needs. It is surprising to me that so few dealers do this. We never let a buyer of one of our cars get away without selling him some of the 'extras' for his machine. It requires no additional sales or clerical help. Our show case and stock room for accessories simply utilize space that would otherwise be of no particular value. It doesn't take hardly any more time to sell a buyer several accessories after you have secured his order for the car. And the profit we make on our accessories—profit that would not otherwise be ours—practically *pays our overhead.* Any dealer can do the same. Why more of them do not avail themselves of this opportunity I cannot figure out. The business simply didn't start that way I guess and they have never thought about stocking accessories. They have been blinded to one of their biggest opportunities."

ACCORDING to *Auptomobile Topics:* "Advances in automobile prices, so far as they have been made, have caused but little flurry in the ranks of automobile dealers."

The journal forms this opinion from a number of letter received from dealers since the recent movement towards increased prices. The articles goes on to say:

"In general there seems to be about an equal tendency to take the matter philosophically, as a necessary part of the general upward movement in materials and labor, remembering that the rise in automobile prices has been nowhere as sharp as it has been in other and more familiar commodities. Other dealers express themselves as sold so far ahead, anyway, that an increased price cannot be measured in any possible retarding effect on sales in comparison with the job they have already on their hands in selling cars now for delivery four months ahead. Others anticipate a measurable quantity of sales resistance from prices that have been recently advanced on the lines which they handle, and one reports an actual drop in sales amounting to approximately 50 per cent. of former volume during the last three weeks."

THE farmer wants assured tractor service regardless of cost in the opinion of the *Chilton Tractor Journal* which says:

"One thing which has militated against the sale of tractors more than any other has been the lack of service. Its importance has not been fully recognzied by manufacturer, distributor or dealer. Too many seem to feel that the transaction is closed when the tractor is delivered and do not realize the implied obligation of keeping the machine in continuous service.

"From the dealer angle, the greatest problem has been to draw a proper differentiation mark between free and paid service. Too many dealers are afraid to draw any line, feeling that at the present pioneering stage in tractor merchandising, considerable leniency—which is not profitable—must be shown.

"Dealers lose sight of the main feature of service. The kind of service the farmer demands is prompt and efficient, whether free or paid. Almost every farmer who owns a tractor owns an automobile or farm machine upon which he is accustomed to pay for service. The matter of a few dollars is not so important to him as keeping his tractor in operation at the time it is needed. The time is coming when every manufacturer will require his dealers to be in a position to render tractor service promptly and efficiently or give up the agency.

"Indeed, it is, in a manner, strange that dealers who are in direct contact with the results of service policies do not quickly realize that the farmer will never accept tractor power until he is sure that there are facilities near at hand for rapid repairs and replacements should the tractor suffer breakage during the busy season."

MANY Dealers in motor truck tires do not realize that it is really essential to have a tire press in order to build up a big and profitable business. The following is an extract from an article appearing in *The Commercial Car Journal:*

"Dealers in motor truck tires who attempt to built up a big business without a hydraulic tire press as part

Digitized by Google

of this service equipment, are working under a serious handicap, according to the H. G. Root Company, of Columbus and Springfield, Ohio. This company maintains a press of maximum capacity in each of its tire service stations, and the business that the company has built up in each city, through being able to give instant service, has proved the necessity of having this piece of machinery where business growth is the desired end.

"F. B. Woosley, vice-president of the company and manager of the Columbus store, is rather proud of the solid tire business his branch is doing, and well he may be, for the big tire press is kept busy most of the time changing tires on trucks that depend upon this store for their tire equipment. * * * The Root company does ot wait for truck owners to find out that its press is at their service. The company keeps two salesmen on the job all the time in the Columbus territory, and these men call on every truck owner at least once every thirty days, inquiring into his needs, giving him tire advice, and, if he is in the market for new tires, selling him just the best suited to his truck. The company believes in maintaining personal contact with its patrons, and as a result of constantly being on the job its salesmen are building up a clientele among the truck owners of Columbus that results in big business."

HOW the small tractor and individual separator has helped to do away with the custom thresher and put threshing on a more efficient basis is described in an article in the *Chilton Tractor Journal* of which the following is an extract:

"The advent of the small tractor brought about the extensive use of the very smallest grain separator. This in turn made possible the use of the individually owned threshing machine and has done away with, to a great extent, the large threshing rig of farmers, and the custom thresher. The small threshing machine has made inroads in the threshing industry in every section of the country, even in the purely grain raising districts.

"The large threshing machine, as run by the professional custom thresher, had its advantages to the farmer, but the disadvantages offset the advantages. In order to point out some of the disadvantages of custom threshing which makes the small privately owned thresher so popular, I wish to poin out a concrete example, which is typical. A farmer in southern Wisconsin lives on one extreme end of a neighborhood in which is located the farmer who does custom threshing. If the farmer in discussion can get the thresher to start out the season at his end of the neighborhood, all well and good. But, generally, the thresherman figures he will do all the threshing any way, so the machine starts out at the other end of the run. In consequence the farmer is kept waiting. Stacking grain in the Middle West has gone out of fashion quite generally, so this farmer has on several different occasions stood considerable loss in the quality of his grain, due to rains coming before he finally does thresh.
